27 March 2015

## €coin records a further rise in March

- The €coin index rose slightly in March, to 0.26 (from 0.23 in February), continuing the upward trend that has been under way since December.
- The main factors in the increase were an improvement in household and business confidence and gains in share prices.
- The **€coin** indicator developed by the Bank of Italy provides a summary index of the current economic situation in the euro area. The indicator is an estimate of quarterly GDP growth shorn of the most erratic components (seasonal variations, measurement errors and short-run volatility). **€coin** is published monthly by the Bank of Italy and CEPR.
- Next **€coin** release dates: **Thursday 30 April** and **Friday 29 May** (preliminary).

## €coin and euro-area GDP – March 2015

Sources: Bank of Italy and Eurostat.

**€coin** collates data from a large set of macroeconomic time series (industrial production indices, business surveys, demand indicators, stock market indices and more). It extracts the information that is relevant to tracking underlying GDP trends for the entire area.

The **€coin** estimate is timely, leading Eurostat's official release of the area-wide GDP growth figure by several months. And it provides a reasonably close anticipation of the quarterly growth rate net of the more volatile components. The estimate of underlying growth trends by **€coin** has two key advantages:

- (i) monthly frequency, with release several months ahead of the official euro-area GDP estimate;
- (ii) immunity to the short-term fluctuations and measurement errors that mark quarterly output growth; that is, the index figure is an indicator of the euro area's actual growth momentum.

The following table shows the performance of the **€coin** indicator over the last year:

Month	€COIN
March 2014	0.38
April 2014	0.39
May 2014	0.31
June 2014	0.31
July 2014	0.27
August 2014	0.19
September 2014	0.13
October 2014	0.08
November 2014	0.06
December 2014	0.11
January 2015	0.16
February 2015	0.23
March 2015	0.26
