NOTE TO THE READER

The work that follows is the fruit of a survey conducted in order to produce a systematic, analytical bibliography of Albert Ando's works spanning more than four decades. It is intended to give the participants at the *Macroeconomic after the (financial) flood. Conference in memory of Albert Ando (1929-2002)* a working instrument containing an overview of his intellectual legacy.

This work, which does not pretend to be exhaustive,¹ necessitated the imposition of some criteria. The organization and description of the material chosen conform to the guidelines set out below.

GUIDELINES

The sources

Albert Ando was an adviser to the Bank for two decades, from 1982 to 2002. The starting point of this survey was therefore the whole of the writings included in the collection of the Paolo Baffi Library at the Bank of Italy. This core body has been steadily supplemented by later works from other libraries, research centres and international organizations, listed in electronic catalogues and databases, or available directly online. Some works containing valuable sources of information for our research are mentioned in the note below.²

The works surveyed: selection criteria and bibliographical approach

This bibliography covers works that were published either in the press or online. Its approach is analytical: there are descriptions of monographs, articles in scholarly journals and encyclopaedia articles, essays published as part of collections, comments and remarks as discussant, articles, reviews of other authors' works, and volumes edited by Ando.

Identification of the works and style of references

The structure of this volume and the style of the references are adapted from those used to prepare *Tommaso Padoa-Schioppa: a preliminary bibliography of his writings*, Rome, Banca d'Italia, 2011 (http://www.bancaditalia.it/pubblicazioni/pubbarbib/bibl_baffi/tommaso-padoa-schioppa-his-

¹ Here we list the works identified as at 12 December 2012.

In addition, we would like to mention Lawrence R. Klein (ed.), *Long-run Growth and Short-run Stabilization: Essays in Memory of Albert Ando*, Cheltenham-Northampton, MA, Edward Elgar, 2006 and Magnus Blomström [et al.] (eds.), *Structural Impediments to Growth in Japan*, Chicago-London, The University of Chicago Press, 2003.

Reprints and further editions under the same title in the same year have been indicated in the notes; those in subsequent years or under different titles have separate entries. A cross-referencing system makes it possible to link the bibliographical citations of the various editions, reprints and translations of each work.

The vast majority of the works is in English; nevertheless, some writings have been translated into Italian, Spanish and even Czech.³ An article from the periodical *Keizai bunseki* is in Japanese (see No. 90).

Organization and order

The works are in chronological order, grouped by year of publication. Each entry is numbered. Within each year, they are in alphabetical order by title, except for works edited and reviews by Ando, which are listed separately. For works written together with co-authors, the co-authors are cited immediately after the title. The names of the other authors are cited as they appear on the title page.

Indexes

The bibliography has two indexes:

- (i) by title. Alongside the title is the number identifying each separate entry. The index also specifies whether the work is an edited volume.
- (ii) by author's name of the reviewed works.

“Some stabilization problems of 1971-75, with an application of optimal control algorithms”, with Carl Palash, in Michael D. Intriligator (ed.), *Frontiers of Quantitative Economics: Papers Invited for the Presentation at the Econometric Society Third World Congress, Toronto, 1975*, Vol. 3b, Amsterdam-New York-Oxford, North-Holland, 1977 (Contributions to Economic Analysis, 106), pp. 783-804.

To quote from the footnote: “Ando was asked to replace someone else on the panel on the role of econometric models in evaluation of stabilization policies at the World Congress of the Econometric Society at Toronto, Canada, in August, 1975, only a few days before the panel was to meet, and he did not had time to prepare an adequate paper for the panel. The paper printed here was then under preparation, and it was subsequently presented orally at the meetings of the American Economic Association at Dallas, Texas, in December, 1975. Since the content of this paper has bearing on the topic discussed at the Toronto panel, we have requested the editor of this volume to accept this paper in place of a summary of Ando’s oral discussion at the Toronto panel.” See No. 67.
