NOTICE TO READERS

From the Number 55 of Supplement to the Statistical Bulletin, the Bank of Italy has adopted the new international standards laid down by the sixth edition of the Balance of Payments and International Investment Position Manual (BPM6), published by the IMF. The shift to the new standards was agreed at international level and during 2014 involved all the EU countries. It was made in parallel with the introduction of the new European system of accounts (ESA 2010) in order to harmonize, in terms of content and presentation, the external accounts and the national accounts. For further details see the Bank of Italy's website at <http://www.bancaditalia.it/statistiche/contenitore-revisione-statistiche/revisione-statistiche/revisione-statistiche.html>

THE MAIN CHANGES INTRODUCED BY THE BPM6

The sixth edition of the Balance of Payments and International Investment Position Manual takes account of the changes that have occurred in the world economy in recent years: the growing international fragmentation of production, the complexity of international firms' structures, the increased attention paid to financial aspects. The changes with respect to the previous standards concern definitions, methods and measurements. The most important are discussed below (see also the figure).

Current account

The BPM6 lays down that the exclusive criterion for recording international merchandise trade is the transfer of ownership and removes some exceptions to this principle included in the previous edition of the manual. This gives rise to the following innovations, which have effects on the distinction between trade in goods and trade in services without, however, having a significant impact on the current account balance:

- i) a change to the treatment of goods that cross the frontier for processing without change of ownership; these goods are no longer included in the gross flows of imported and exported goods. Instead the performance of just the service of processing is included among services;
- ii) net exports of goods through merchanting transactions – the purchase by an Italian operator of goods from a non-resident operator and the subsequent resale of the same goods (usually with the achievement of a profit) to another non-resident operator without the goods physically crossing the Italian frontier – are recorded as trade in goods and no longer included among services.

The services account now includes indirectly measured financial intermediation services – banks' margin, not deriving from explicit commissions, on transactions that can be linked to loans and deposits – and the flows related to trade in patents and licenses that derive from R&D; insurance and pension services are recorded separately.

Income is divided into primary income, deriving directly from work, financial assets and natural resources, and secondary income, relating to distribution. The items previously accounted for as current transfers are included in income, mostly secondary income.

Financial account and international investment position

The sign convention that traditionally characterized the financial account has been abandoned: positive (negative) value on the assets side now indicate an increase (reduction) of assets, as was already the case on the liabilities side. The balance on the financial account is therefore obtained as the difference between flows of assets and flows of liabilities.

The financial account and the international investment position provide for greater detail and adopt a new classification of institutional sectors and instruments, harmonized with ESA 2010.

In direct investment there is a different accounting treatment of so-called reverse investment, i.e. of the assets a resident firm that is the object of direct investment holds in the non-resident investing firm (and analogously of the liabilities a resident investing firm holds vis-à-vis the non-resident firm that is the object of direct investment). Such assets and liabilities, which had previously led to a reduction of the direct investment (directional principle) are now accounted for on a gross basis (asset-liability principle); the effect on the financial account balance and the international investment position is nil.

Special Drawing Rights (international reserve assets created by the IMF), which were previously included in the international investment position only on the assets side (among the official reserves), are now also recorded as liabilities of the central bank, for the part assigned to Italy.

THE IMPACT OF THE NEW STANDARDS

With the publication of the new Balance of Payments and International Investment Position Manual, the Bank of Italy is also making available historical data reconstructed for the period 1995-2012, with less detail for the earlier years. Overall, the revisions do not significantly change the valuation of Italy's external relations, since the most important items and the main balances remain almost unchanged.

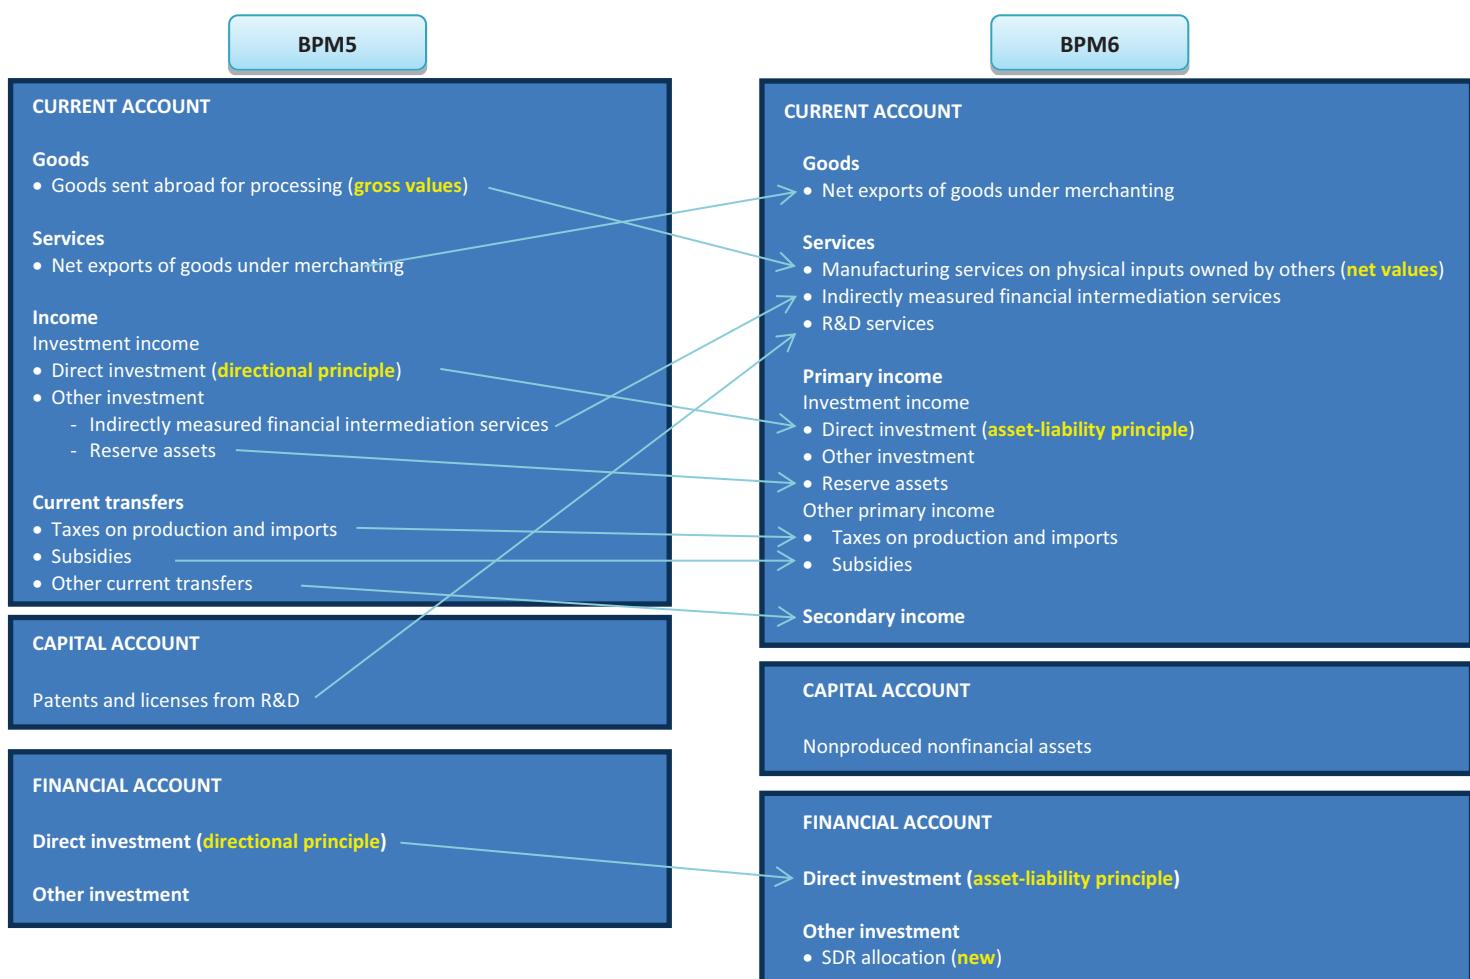

The main effects of applying the new standards are on the items of the current account. As regards merchandise trade, there are reductions in the flows both on the sales abroad side (credits) and on the purchases side (debits) following the elimination from that item of the gross exports and imports connected with processing; the net effect on the balance is negative but very small at about 0.1 per cent of GDP per year (see the table for more detail for 2012, the last year for which definitive data are available based on BPM5). By contrast, the effect of the revisions on gross flows of services is an increase, that is small on the credit side and slightly more significant on the debit side, where the inclusion of indirectly measured financial services makes a greater impact; the overall effect on the services balance is negative but here again it is on the order of 0.1 per cent of GDP. As a result of the revisions the current account balance declines slightly, by an amount that does not exceed 0.2 per cent of GDP per year.

Revisions of the main items of the current account in 2012 (1)
(difference between the amounts calculated on the basis of BPM6 and BPM5)

	Credits million €	Debits million €	Balance million €	% of GDP
Current account	-13,934	-10,347	-3,587	-0.2
Goods	-14,309	-12,861	-1,448	-0.1
Services	2,524	3,569	-1,045	-0.1
Primary and secondary income (2)	-2,149	-1,054	-1,095	-0.1

(1) 2012 is considered because it is the last year for which definitive data are available based on BPM5. – (2) They coincide with the sum of the BPM5 items “Income” and “Transfers”.

General information

(*) On BDS the tables on international investment position provide, for portfolio investment and other investments only, more details by instrument and sector.

Balance of payments and international investment position

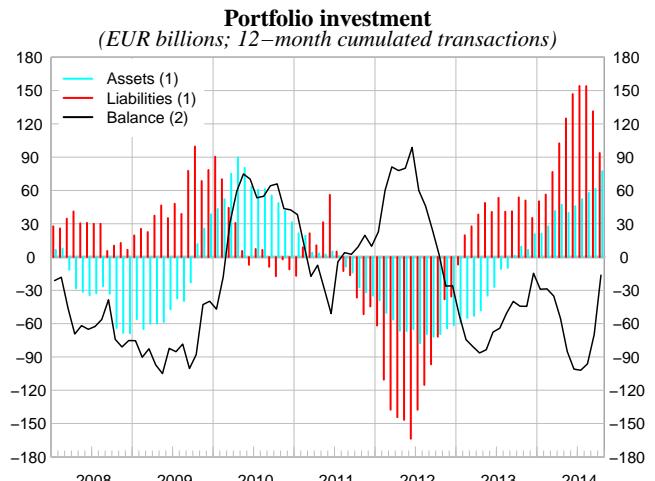

Figure 1

(1) According to the sixth edition of the Balance of Payments Manual, Secondary Income includes most of the items which were previously classified as "Current Transfers".

In the twelve months to October 2014 the current account balance recorded a surplus of 27.2 billion (1.7 per cent of GDP), from 13.5 billion in the previous twelve months. The improvement is the continuation of a trend started in mid-2011 and was due to the increase in the surplus of merchandise trade, which reached 47.3 billion (about 2.9 per cent of GDP) from 34.6 billion in October 2013.

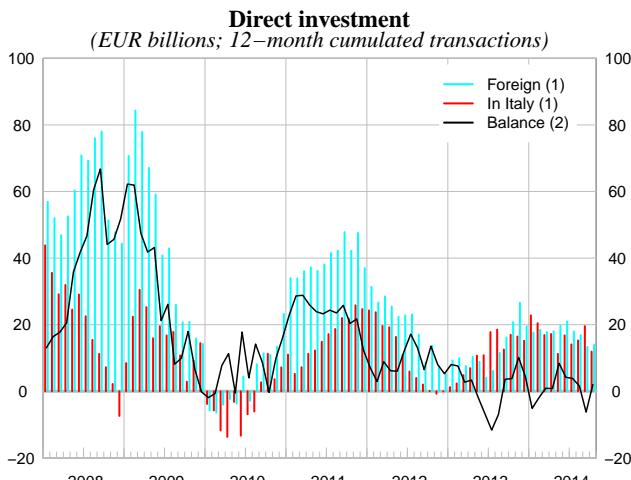

Figure 2

(1) Positive values indicate an increase. (2) Positive balances indicate net acquisitions of foreign assets.

In the twelve months to October the portfolio investment balance recorded net inflows (net incurrence of liabilities) amounting to 15.8 billion. In October Italian residents made net purchases of foreign portfolio securities for 13.9 billion. Non-residents made net sales of Italian securities for 3.5 billion: net acquisition of Italian government debt securities (2.5 billion) was more than offset by net sales of Italian private securities.

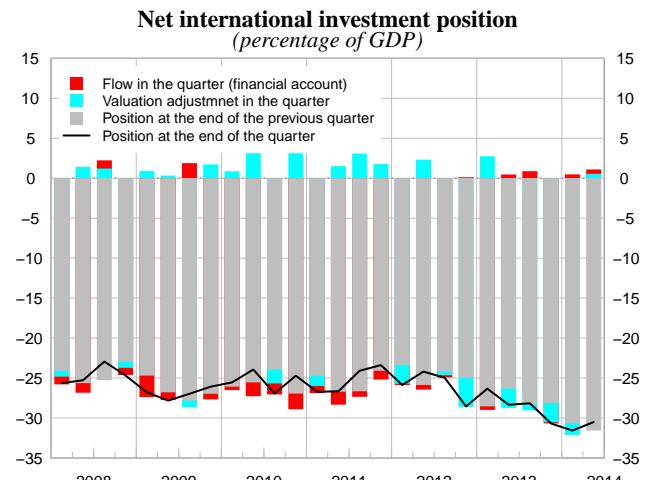

Figure 3

(1) Positive values indicate an increase. (2) Positive balances indicate net acquisitions of foreign assets.

In the twelve months to October the direct investment balance recorded net acquisition of assets for 3.3 billion. In October non-residents reduced their net direct investment assets in Italy by 2.1 billion, while Italian direct investment abroad recorded net acquisition of assets for 6.1 billion.

Figure 4

At the end of June 2014 Italy had a net debtor international investment position of 494.7 billion (30.5 per cent of GDP). The improvement with respect to the end of March 2014 (1.1 percentage points of GDP) was equally due to the current account surplus and to valuation adjustments, which raised the value of assets more than that of liabilities.

METHODOLOGICAL APPENDIX

GENERAL INDICATIONS

GLOSSARY

The glossary is based on the Sixth edition of the International Monetary Fund's Balance of Payments and International Investment Position Manual (BPM6), to which reference is made for the complete definition of the various items.

The balance of payments is an accounting system that records all the economic and financial transactions that occur in a given period between a country and the rest of the world. Conventionally, in the current account and the capital account of the balance of payments, transactions such as imports, payable income and transfers and purchases of nonproduced nonfinancial assets are classified as "debits" and those such exports, receivable income and transfers and sales of nonproduced nonfinancial assets are classified as "credits"; balances are calculated as the difference between credits and debits. With the adoption of BPM6, the sign convention that traditionally characterized the financial account has been abandoned; positive (negative) values on the assets side now indicate an increase (reduction) of assets, as was already the case on the liabilities side. The balance on the financial account is therefore obtained as the difference between net flows of assets and net flows of liabilities. Consistently BPM6 provides for "errors and omissions" to be equal to the difference between the balance of the financial account and the sum of the balances of the current account and the capital account.

CURRENT ACCOUNT

The current account includes all transactions that pertain to goods, services, and primary and secondary incomes.

a) Goods

Comprises merchandise trade, net exports of goods under merchanting (the purchase by an Italian operator of goods from a nonresident operator and the subsequent resale of the same goods without their physically crossing the Italian border) and nonmonetary gold. Goods are recorded according to the fob definition, both for imports and for exports; so that they are valued at the frontier of the exporting country (whereas foreign trade statistics are typically compiled for imports on the basis of the cif definition, i.e. at the frontier of the country compiling the statistics).

b) Services

Manufacturing services for goods using physical inputs owned by others (manufacture of third party goods or processing) include manufacturing services such as assembly, labeling and packing.

Maintenance and repair services cover the maintenance and repair work carried out by residents on goods that are owned by nonresidents (and vice versa).

Transport is the process of carriage of people and objects from one location to another as well as related supporting and auxiliary services, including postal and courier services, provided it is offered by a resident of an economy to one of another.

Travel covers goods and services acquired by travelers (or acquired on their behalf or however supplied to them) who stay for less than one year in a country in which they are not resident. This time limit does not apply to students or medical patients; military, government agency and embassy personnel and members of their families are excluded.

Construction covers construction and installation project work performed abroad by a resident enterprise for works with a duration of less than one year (and vice versa). Goods imported and exported for construction works are included in this item and not under goods.

Insurance and pension services include the provision to nonresidents (and vice versa) of services such as direct insurance and reinsurance, auxiliary services to insurance, pension schemes and standardized guarantee schemes. The amount includes the fee for the service provided and not the total premium.

Financial services cover commissions and fees for financial services exchanged between residents and nonresidents, indirectly measured financial intermediation services (the margin of financial companies not deriving from explicit commissions on transactions linkable to loans and deposits); insurance and pension fund services are excluded.

Charges for the use of intellectual property (Royalties and license fees) include payments for the use of proprietary rights (such as patents, trademarks, copyrights, industrial processes and designs including trade secrets, franchises), which can arise from research and development, as well as from marketing. They also include charges for licenses to reproduce or distribute (or both) intellectual property embodied in produced originals or prototypes and related rights.

Computer, information and telecommunication services cover resident/non-resident transactions related to information services (news agency services, database services and web search portals), services related to hardware, software and data processing (including consultancy services and maintenance) and to transmission of sound, images, data or other information (by telephone, telex, telegram, cable radio and television, satellite radio and television, electronic mail and fax) and mobile telecommunication services, Internet services and online access services.

Other services to firms cover research and development services, professional and management consulting services and technical, trade-related and other business services.

Personal, cultural and recreational services include education services, health services and cultural and recreational services, and the other personal services provided by residents to nonresidents (and vice versa). They include services associated with the production of films, music, radio and television programmes, and their distribution. They also include audiovisual services and the like (fees related to the production of films and radio and television programmes and the recording of music).

Government goods and services n.i.e. is a residual category that covers the transactions of governments (including international organizations on goods and services) that cannot be classified under other items.

c) Primary income

Primary income represents the return that accrues to institutional units for their contribution to the production process or for the provision of financial assets or for renting natural resources to other institutional units. It includes compensation of employees, investment income and other primary income.

Compensation of employees is recorded when the employer and the employee are located in different economies. For the economy in which the employer is located, it comprises the total remuneration (wages, salaries and other benefits, including social contributions and private insurance policies or pension funds) paid to non-resident workers. For the economy where the individuals are resident, it consists in the total remuneration paid to them by nonresident firms. If there is not an employee relationship, the compensation constitutes a purchase of services.

Investment income covers receipts and payments deriving from the ownership by residents of external financial assets by residents (credits) and, symmetrically, deriving from the ownership by nonresidents of national financial assets (debits). It

includes income from shares and other equity (dividends, withdrawals from income of quasi-corporations, reinvested earnings) and interest. It also includes investment income attributable to policyholders in insurance, standardized guarantees and pension funds.

Other primary income is classified according to the institutional sector of the reporting economy (government or other sectors) and covers taxes on production and on imports, subsidies on products and fees deriving from the use of natural resources (land rent and rights to exploit mineral deposits).

d) Secondary income

This includes current transfers between residents and non-residents, i.e. the supply of real resources or financial items by a resident institutional unit to a nonresident one (and vice versa) without anything of economic value being supplied as a direct return. They are different from capital transfers and are divided according to the institutional sector that makes or receives the transfer in the reporting economy (government or other sectors).

Government current transfers include current taxes on income and wealth, social contributions and social benefits, current international cooperation, miscellaneous current transfers and the own resources of the European Union.

Current transfers of other sectors cover current taxes on income and wealth, social contributions and social benefits, current international cooperation, miscellaneous current transfers, net premiums on nonlife insurance, nonlife insurance claims, adjustment for change in pension entitlements; they also cover personal transfers in cash or in kind between resident and nonresident households, including workers' remittances.

CAPITAL ACCOUNT

a) Gross acquisition and disposal of nonproduced, nonfinancial assets (intangible assets).

This item refers to transfers of ownership between residents and nonresidents of: i) natural resources, ii) licenses, leasing contracts and other contracts, and iii) marketing resources (brand names, trademarks, logos, etc.) and goodwill. Acquisitions and disposals are recorded separately, on a gross basis rather than a net basis. Entry in the capital account refers only to the sale or purchase of such assets and not to their use.

b) Capital transfers.

This item refers to transfers of ownership of fixed assets; transfers of funds linked to the acquisition or disposal of fixed assets and the forgiveness of debts. Capital transfers are divided according to the institutional sector that makes or receives the transfer in the reporting economy (government or other sectors). They include capital taxes and the other capital transfers.

FINANCIAL ACCOUNT

a) Direct investment.

There is direct investment when a resident of an economy controls or has a significant influence over the management of a firm resident in another economy. Direct or indirect possession of 10 per cent or more of the voting rights is proof of such a

relationship. Once the direct investment has been established, all the subsequent financial flows and/or stocks involving the persons in question are recorded as direct investment transactions/positions. Direct investment is classified according to the instrument involved: shares, other equity, reinvested earnings and debt instruments between the investor and the investee firm or with other firms affiliated with the referred to above.

b) Portfolio investment.

This item covers transactions between residents and non-residents involving equity securities and debt securities not included under direct investment. Portfolio investment is classified according to shares, investment fund shares, debt securities (short or long-term) and divided by resident sector and counterparty sector.

c) Financial derivatives and employee stock options.

These are financial instruments linked to other financial instruments by means of which specific risks can be traded directly. This category is identified separately from the others insofar as it concerns the transfer of risk rather than the provision of funds or other resources. In addition, financial derivatives do not generate primary income. Employee stock options are options to purchase the shares of a company given to its employees as a form of remuneration.

d) Other investment.

This item covers: i) equity other than securities, ii) banknotes, coins and deposits, iii) loans, iv) insurance, pension schemes and standardized guarantees, v) trade credit and advances, vi) other accounts receivable/payable, and vii) SDR allocations (holdings of SDRs are included under reserve assets).

e) Official reserves.

The reserve assets of the European Central Bank and the national central banks making up the Eurosystem refer to assets in foreign currency other than the euro that are under the effective control of the monetary authorities, highly liquid, marketable and of high quality (claims on nonresidents of the euro area that are liquid, negotiable and readily available to the monetary authority and that are denominated in convertible currencies other than the euro, monetary gold, reserve position in IMF and SDRs).

INTERNATIONAL INVESTMENT POSITION

The international investment position indicates the stock of an economy's financial assets and liabilities (in foreign and domestic currency) with the rest of the world. The presentation format uses the same classifying criteria as the financial account: functional (direct investment, portfolio investment, financial derivatives and employee stock options, other investment, and official reserves), resident sector that holds the assets or issued the liabilities, and instrument. SDR allocations are considered as incurrence of liabilities (included under other investment) by the monetary authority of the country they are allocated to in view of the potential obligation to pay them back and the accrual of interest.

The balance of payments and international investment position can be reconciled. The change in the stock of external financial assets and liabilities in a period is attributable to financial flows (transactions on the financial account of the balance of payments) and valuation adjustments (referring to the changes between the start and the end of the period in exchange rates and the prices of underlying assets and any other adjustments).

The sectorization is as follows. "Central bank" (Bank of Italy); "General government" (central government, local government, social security and social assistance institutions); "Deposit taking corporations other than the CB" (banks, electronic

money institutions, Cassa depositi e prestiti S.p.A.); "Other sectors" (financial companies other than banks and nonfinancial enterprises, households, non-profit-making institutions serving households). These institutional sectors are consistent with the definitions contained in ESA 2010.

DATA DISSEMINATION

The balance of payments data are normally released according to the following calendar. The provisional data for month M of quarter Q are published in the Supplement released about two months later (M+55 days). The first revision of these data is published four months later (M+115 days), with the exception of some items for which the sample data are still not available. A second revision is published about 115 days after the end of the reference quarter (Q+115 days) and it concerns all the months of the quarter. Possible other revisions are published in the June Supplement of the year after that of month M. Moreover, during the last months of year T, all the monthly figures for merchandise trade and transportation in year T-1 are revised following the release of updated foreign trade data by Istat. The revised data are published as soon as possible.

The dissemination of international investment position and external debt data normally occurs according to the following calendar: first provisional data for the end of quarter Q are published about 90 days after the end of the reference period; revised data are disseminated about 3 months later.

SOURCES

The data collection system for the compilation of Italian balance of payments, which started with effect from September 2010, uses several different sources: (a) censuses, such as the statistical reports of entities supervised by the Bank of Italy; (b) sample surveys, with special reference to those carried out at non-financial corporations and insurance corporations; and (c) administrative data collected for other than statistical purposes, in order to comply with legal obligations.

The data on goods in the current account are compiled using information produced by Istat's National Accounts Department to adjust for the processing component in foreign trade data, obtained in turn from the Intra-Community Trade Statistical System (INTRASTAT) for intra-EU transactions and from customs declarations for extra-EU transactions. Istat's National Accounts Department also provides the data on manufacturing services for goods using physical inputs owned by others (processing).

Information about assets and liabilities stocks of the resident Italian banking system, necessary to compile the international investment position, is derived from "Matrice dei Conti"; moreover, this source supplies data on the - anonymous - security-by-security reporting of the portfolio stocks held for investors by depositories (as provided for in Guidelines ECB/2004/15 and ECB/2007/3). The monthly collection of these stocks also constitutes the basis for the calculation of portfolio flows and investment incomes.

Other information used to compile the Italian balance of payments and international investment position is derived from the statistical reports of other financial intermediaries, concerning stock and flow data and information about their portfolios and customer repurchase agreements.

As regards sample surveys, together with those regarding tourism and international travel and merchandise transport conducted since the second half of the 1990s, there is a direct reporting system for non-financial and insurance corporations about their transactions with the rest of the world. The sample is made up of about 7,000 Italian companies, selected on the basis of their size and total volume of business with the rest of the world; for some kind of transactions, they are also selected on the basis of their geographical location and the presence/absence of foreign affiliates. Both non-financial transactions (services, some types of transfers and labour incomes) and financial transactions are collected. For the latter the periodicity of the measurements varies from quarterly to annual, except for a small sample of about 400 larger corporations, whose data are collected on a monthly basis in order to capture the evolution of highly volatile financial phenomena. Another exception regards significant transactions in direct investment (inward and outward), which are reported on a case-by-case basis.

As regards workers' remittances, the data source is constituted by the reports sent by money transfer operators, banks and other financial intermediaries that offer this kind of service, as well as by Poste Italiane spa, on money transfer transactions among physical persons, from or to abroad. This data collection system has been in place since 2006 (2010 for banks).

Administrative sources: a set of additional data sources used to collect information about specific items of the Italian balance of payments and international investment position:

The Ministry for the Economy and Finance, as a direct reporter about: a) foreign assets and liabilities of central government; b) personal income tax returns for information on foreign financial assets held by residents and related investment income, Box RW (investment abroad and/or transfers from/to abroad), Sections I, II and III; c) anonymous data regarding settlements from/to abroad, with a 12,500 euro threshold, carried out by resident natural persons, non-commercial and other minor companies by means of banks, other financial intermediaries and Poste Italiane spa, and reported yearly to the Revenue Agency.

National Institute of Social Security (INPS): information on pensions paid abroad to non-residents and contributions received from abroad.

NOTES TO THE TABLES

The order of the tables in the following notes is based on their code numbers. The notes to each table are set out below, together with references to the "Notes to the classification variables" section where appropriate.

TBP60085 - Financial account

Italy's balance of payments data have been compiled since 2013 on the basis of the international standards laid down by the IMF's Balance of Payments and International Investment Position Manual (BPM6) and reconstructed for the earlier periods to guarantee continuity. Starting from January 2009, investment portfolio data are derived, security-by-security, as the difference of the monthly stocks of foreign securities held by residents (assets) and by nonresidents (liabilities), in quantity or nominal value, evaluated at the average price of the security in the reference period. The data sources used to calculate the stocks of foreign securities are the reports of resident custodians (mainly banks), anonymous and security-by-security, on securities held in custody on behalf of investors supplemented by the reports of resident banks and money market funds and the Bank of Italy on their own securities and by a sample survey on assets held abroad by non-bank entities.

TBP60300 - Current account: balances

The data have been compiled since 2013 on the basis of the international standards laid down by the IMF's Balance of Payments and International Investment Position Manual (BPM6) and reconstructed for the earlier periods to guarantee continuity.

TBP60310 - Current account: credits

The data have been compiled since 2013 on the basis of the international standards laid down by the IMF's Balance of Payments and International Investment Position Manual (BPM6) and reconstructed for the earlier periods to guarantee continuity.

TBP60320 - Current account: debits

The data have been compiled since 2013 on the basis of the international standards laid down by the IMF's Balance of Payments and International Investment Position Manual (BPM6) and reconstructed for the earlier periods to guarantee continuity.

TBP60400 - International travel by purpose: credits, debits and balances

Data are derived from the sample survey on Italy's international tourism, carried out by the Banca d'Italia on a continuous basis since 1996. The survey consists in questioning a sample of inbound and outbound travellers at the borders. Two main activities are carried out each year: around 150,000 face-to-face interviews in order to collect information on the travellers' expenditure and on a set of detailed traveller's characteristics and behaviour, and about 1,500,000 counting operations for disaggregating the number of travellers - drawn by administrative sources - by country of residence.

TED60500 - Breakdown of external liabilities other than equity (external debt)

The data are compiled on the basis of the sixth IMF's Balance of Payments and International Investment Position Manual (BPM6) and therefore are consistent with those related to international investment position. External debt statistics are a subset of the international investment position statistics, as the former do not include financial derivatives, equity capital and reinvested earnings. Partial misalignments between the two sets of statistics may be due to the differences in the provisional nature of the data. With effect from end-2008 data, portfolio investment stocks are calculated on the basis of an anonymous security-by-security reporting of the reporting of the stocks held for investors by depositaries.

TICOM250 - Indicators of competitiveness based upon producer prices of manufactures (vis-à-vis 61 partner countries; period averages; indices, 1999=100)

The table shows the indicators of competitiveness calculated on the basis of the producer prices of manufactures (the related series were recently revised for the main Euro-area countries) in sixty-two countries. For the methodology, see "A New Indicator of Competitiveness for Italy and the Main Industrial and Emerging Countries" in Supplements to the Statistical Bulletin, Methodological Notes, no. 66, December 2005. Rounding may cause discrepancies between the monthly, quarterly and annual figures. Starting with the Supplement no. 17, 16 March 2007, the series have been rebased (from 1993=100 to 1999=100).

TIIP0200 - International investment position: net positions

The data have been compiled since 2013 on the basis of the international standards laid down by the IMF's Balance of Payments and International Investment Position Manual (BPM6) and reconstructed for the earlier periods to guarantee continuity. Further information is included in the notes to Tables TIIP0300 e TIIP0400.

TIIP0300 - International investment position: assets

The data have been compiled since 2013 on the basis of the international standards laid down by the IMF's Balance of Payments and International Investment Position Manual (BPM6) and reconstructed for the earlier periods to guarantee continuity. With effect from end-2007, Italy's international investment position is compiled on the basis of a statistical data collection and compilation system based on stock data; the series prior to end-2007 have been revised to provide continuity with the new data. With effect from end-2008 data, portfolio investment stocks are calculated on the basis of an anonymous security-by-security reporting of the stocks held for investors by depositaries (as provided for in Guidelines ECB/2004/15 and ECB/2007/3).

TIIP0400 - International investment position: liabilities

The data have been compiled since 2013 on the basis of the international standards laid down by the IMF's Balance of Payments and International Investment Position Manual (BPM6) and reconstructed for the earlier periods to guarantee continuity. With effect from end-2007, Italy's international investment position is compiled on the basis of a statistical data collection and compilation system based on stock data; the series prior to end-2007 have been revised to provide continuity with the new data. With effect from end-2008 data, portfolio investment stocks are calculated on the basis of an anonymous security-by-security reporting of the stocks held for investors by depositaries (as provided for in Guidelines ECB/2004/15 and ECB/2007/3). Starting with the November 2013 issue of the Supplement, the external debtor position in financial derivatives of General government of Italy includes new information on transactions with foreign banks. The information became available following a cooperation agreement with the Ministry of Economy and Finance, under which new estimation methods consistent with national accounts and balance of payments definitions were developed. Since the variation in the liability side is entirely due to valuation adjustments, no corrections were made to balance of payments flows.

GENERAL INFORMATION

I - Unless indicated otherwise, figures have been computed by the Bank of Italy.

II - Symbols and Conventions:

- the phenomenon in question does not occur;
- the phenomenon occurs but its value is not known;
- .. the value is known but is nil or less than half the final digit shown.

Figures in parentheses in roman type () are provisional. Those in parentheses in italics () are estimated.

III - The tables are identified both by a number and by an alphanumeric code that defines the content of the table in the database in the electronic archive in which information to be released to the public is held. A similar code identifies the different aggregates shown in each table.

IV - The methodological notes in the last part of the Supplement are identified by electronic codes that refer to the tables and, within each table, to the individual aggregates. Notes that refer to a single observation are also identified by the date of that observation.

SUPPLEMENTS TO THE STATISTICAL BULLETIN

Money and Banking (monthly)

The Financial Market (monthly)

The Public Finances, borrowing requirement and debt (monthly)

Balance of Payments and International Investment Position (monthly)

Financial Accounts (quarterly)

Payment System (half yearly)

Public Finance Statistics in the European Union (half yearly)

Local Government Debt (half yearly)

Household Wealth in Italy (annual)

Sample Surveys (irregular)

Methodological Notes (irregular)

All the supplements are available on the Bank of Italy's site (www.bancaditalia.it).
