

Balance of Payments and International Investment Position

17 November 2017

For further information: statistiche@bancaitalia.it
www.bancaditalia.it/statistiche/index.html
Figure 1

In the twelve months ending in September 2017, the current account surplus amounted to 46.8 billion euros (2.7 per cent of GDP), compared to 43.8 billion in the corresponding period of 2016. The improvement was due to the higher surplus of the primary income balance (9.1 billion, from 1.1), only partly offset by the lower surplus of the goods balance (from 60.0 to 56.9 billion).

Figure 2

In the twelve months ending in September 2017, net acquisitions of foreign assets in the financial account amounted to 61.9 billion. Net acquisition of assets in portfolio investment (116.2 billion, as a result of net purchases of foreign securities by residents by 98.5 billion and net sales of Italian securities by foreign investors by 17.8 billion) was partially offset by net incurrence of liabilities in direct investment (-7.0 billion) and other investment (-42.5 billion).

Figure 3

In September 2017 acquisitions of foreign financial assets amounted to 14.3 billion and involved the main functional categories. Direct investment abroad increased by 4.4 billion. Net purchases of foreign portfolio securities by Italian residents amounted to 8.2 billion, of which two thirds in equity and fund shares. Other investment assets increased by 1.8 billion.

Figure 4

In September foreign liabilities increased by 7.9 billion. Other investment inflows increased by 15.1 billion, but were partially offset by net sales of Italian portfolio securities by foreign investors for 6.4 billion (exclusively long-term debt instruments), and by modest direct investment outflows (-0.8 billion).

Reference period: September 2017

General information

- I Unless indicated otherwise, figures have been computed by the Bank of Italy.
- II Symbols and Conventions:
 - the phenomenon does not occur;
 - the phenomenon occurs but its value is not known;
 - .. the value is known but is nil or less than half the final digit shown.
- Figures in parentheses in roman type () are provisional. Those in parentheses in italics () are estimated.
- III The tables are identified both by a number and by an alphanumeric code that defines the content of the table in the database in the electronic archive in which information to be released to the public is held. A similar code identifies the different aggregates shown in each table.

Notice to readers

Revision of Italy's external statistics

With respect to the publication of 19 September 2017 the data on Italy's balance of payments and international investment position from 2010 include revisions due to the update of the estimates of Italian residents' holdings of foreign investment fund shares, particularly of those deposited directly abroad. This component, for which data compilation via standard sources is not possible, has been revised according to new information collected on an ad hoc basis. For the balance of payments flows, revisions concerned both the financial account (portfolio assets in foreign fund shares) and the investment income item of the current account. For details see the [methodological note](#).

The time series for the years 2015-2016 also take into account the new data sourced from the annual survey of companies ('direct reporting'), which become available every September following the reference year.

Balance of payments and international investment position

Notes to the tables

The order of the tables in the following notes is based on their code numbers. The notes to each table are set out below, together with references to the “Notes to the classification variables” section where appropriate.

TBP60085 - Financial account

Italy's balance of payments data have been compiled since 2013 on the basis of the international standards laid down by the IMF's Balance of Payments and International Investment Position Manual (BPM6) and reconstructed for the earlier periods to guarantee continuity. Starting from January 2009, investment portfolio data are derived, security-by-security, as the difference of the monthly stocks of foreign securities held by residents (assets) and by nonresidents (liabilities), in quantity or nominal value, evaluated at the average price of the security in the reference period. The data sources used to calculate the stocks of foreign securities are the reports of resident custodians (mainly banks), anonymous and security-by-security, on securities held in custody on behalf of investors supplemented by the reports of resident banks and money market funds and the Bank of Italy on their own securities and by a sample survey on assets held abroad by non-bank entities.

TBP60300 - Current account: balances

The data have been compiled since 2013 on the basis of the international standards laid down by the IMF's Balance of Payments and International Investment Position Manual (BPM6) and reconstructed for the earlier periods to guarantee continuity.

TBP60310 - Current account: credits

The data have been compiled since 2013 on the basis of the international standards laid down by the IMF's Balance of Payments and International Investment Position Manual (BPM6) and reconstructed for the earlier periods to guarantee continuity.

TBP60320 - Current account: debits

The data have been compiled since 2013 on the basis of the international standards laid down by the IMF's Balance of Payments and International Investment Position Manual (BPM6) and reconstructed for the earlier periods to guarantee continuity.

TBP60400 - International travel by purpose: credits, debits and balances

Data are derived from the sample survey on Italy's international tourism, carried out by the Banca d'Italia on a continuous basis since 1996. The survey consists in questioning a sample of inbound and outbound travellers at the borders. Two main activities are carried out each year: around 150,000 face-to-face interviews in order to collect information on the travellers' expenditure and on a set of detailed traveller's characteristics and behaviour, and about 1,500,000 counting operations for disaggregating the number of travellers - drawn by administrative sources - by country of residence.

TED60500 - Breakdown of external liabilities other than equity (external debt)

The data are compiled on the basis of the sixth IMF's Balance of Payments and International Investment Position Manual (BPM6) and therefore are consistent with those related to international investment position. External debt statistics are a subset of the international investment position statistics, as the former do not include financial derivatives, equity capital and reinvested earnings. Partial misalignments between the two sets of statistics may be due to the differences in the provisional nature of the data. With effect from end-2008 data, portfolio investment stocks are calculated on the basis of an anonymous security-by-security reporting of the stocks held for investors by depositories.

Balance of payments and international investment position

TICOM250 - Indicators of competitiveness based upon producer prices of manufactures (vis-à-vis 61 partner countries; period averages; indices, 1999=100)

The table shows the indicators of competitiveness calculated on the basis of the producer prices of manufactures in sixty-two countries. For the methodology, see A. Felettigh, C. Giordano, G. Oddo e V. Romano, [Reassessing price-competitiveness indicators of the four largest euro-area countries and of their main trading partners](#) Banca d'Italia, Questioni di economia e finanza (Occasional Papers), 280, July 2015. Rounding may cause discrepancies between the monthly, quarterly and annual data.

TIIP0200 - International investment position: net positions

The data have been compiled since 2013 on the basis of the international standards laid down by the IMF's Balance of Payments and International Investment Position Manual (BPM6) and reconstructed for the earlier periods to guarantee continuity. Further information is included in the notes to Tables TIIP0300 e TIIP0400.

TIIP0300 - International investment position: assets

The data have been compiled since 2013 on the basis of the international standards laid down by the IMF's Balance of Payments and International Investment Position Manual (BPM6) and reconstructed for the earlier periods to guarantee continuity. With effect from end-2007, Italy's international investment position is compiled on the basis of a statistical data collection and compilation system based on stock data; the series prior to end-2007 have been revised to provide continuity with the new data. With effect from end-2008 data, portfolio investment stocks are calculated on the basis of an anonymous security-by-security reporting of the stocks held for investors by depositories (as provided for in Guidelines ECB/2004/15 and ECB/2007/3).

TIIP0400 - International investment position: liabilities

The data have been compiled since 2013 on the basis of the international standards laid down by the IMF's Balance of Payments and International Investment Position Manual (BPM6) and reconstructed for the earlier periods to guarantee continuity. With effect from end-2007, Italy's international investment position is compiled on the basis of a statistical data collection and compilation system based on stock data; the series prior to end-2007 have been revised to provide continuity with the new data. With effect from end-2008 data, portfolio investment stocks are calculated on the basis of an anonymous security-by-security reporting of the stocks held for investors by depositories (as provided for in Guidelines ECB/2004/15 and ECB/2007/3). Starting with the November 2013 issue of the Supplement, the external debtor position in financial derivatives of General government of Italy includes new information on transactions with foreign banks. The information became available following a cooperation agreement with the Ministry of Economy and Finance, under which new estimation methods consistent with national accounts and balance of payments definitions were developed. Since the variation in the liability side is entirely due to valuation adjustments, no corrections were made to balance of payments flows.

'Statistics' series publications are available on the Bank of Italy's site:
