

# Balance of Payments and International Investment Position

18 January 2019

For further information: [statistiche@bancaitalia.it](mailto:statistiche@bancaitalia.it)  
[www.bancaditalia.it/statistics/index.html](http://www.bancaditalia.it/statistics/index.html)

**Current account: 12-month cumulated balances**  
(billions of euros)

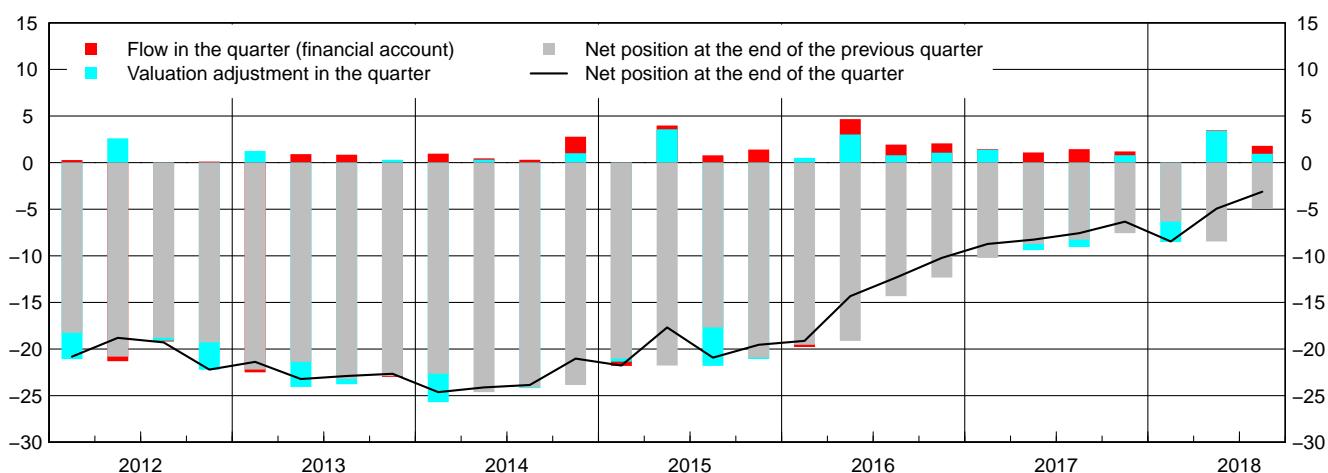

**Figure 1**

In the twelve months ending in November 2018 the current account surplus amounted to EUR 46.7 billion (2.7 per cent of GDP), from 48.0 billion in the corresponding period of 2017. The reduction in good surplus (49.5 billion, from 56.3) was only partly offset by the improvement in the balances of services (-1.3 billion, from -3.3) and of primary income (14.0 billion, from 10.8).

**Net international investment position**  
(percentage of GDP)

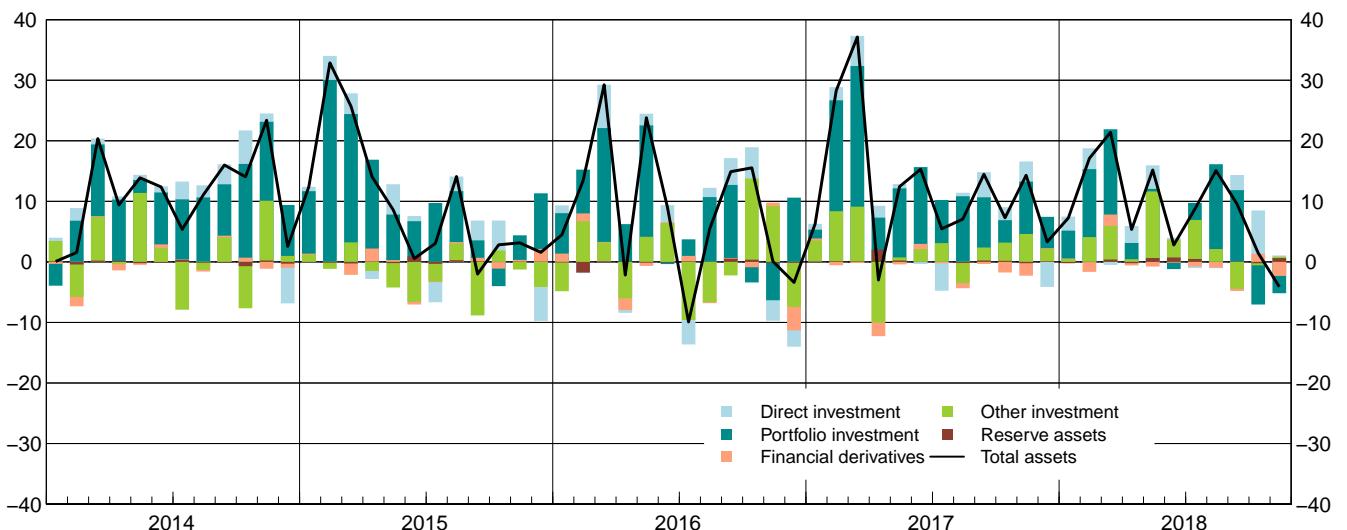

**Figure 2**

At the end of September 2018, Italy's net international debtor position stood at EUR 54.7 billion (3.1 per cent of GDP), narrowing by almost 32 billion compared with the previous quarter. The improvement was determined by the current account balance (which accounted for 15.1 billion) and by the reduction in the market value of portfolio liabilities (which accounted for 18.4 billion), in turn due to the fall in share prices and especially in public sector bond prices.

**Figure 3**

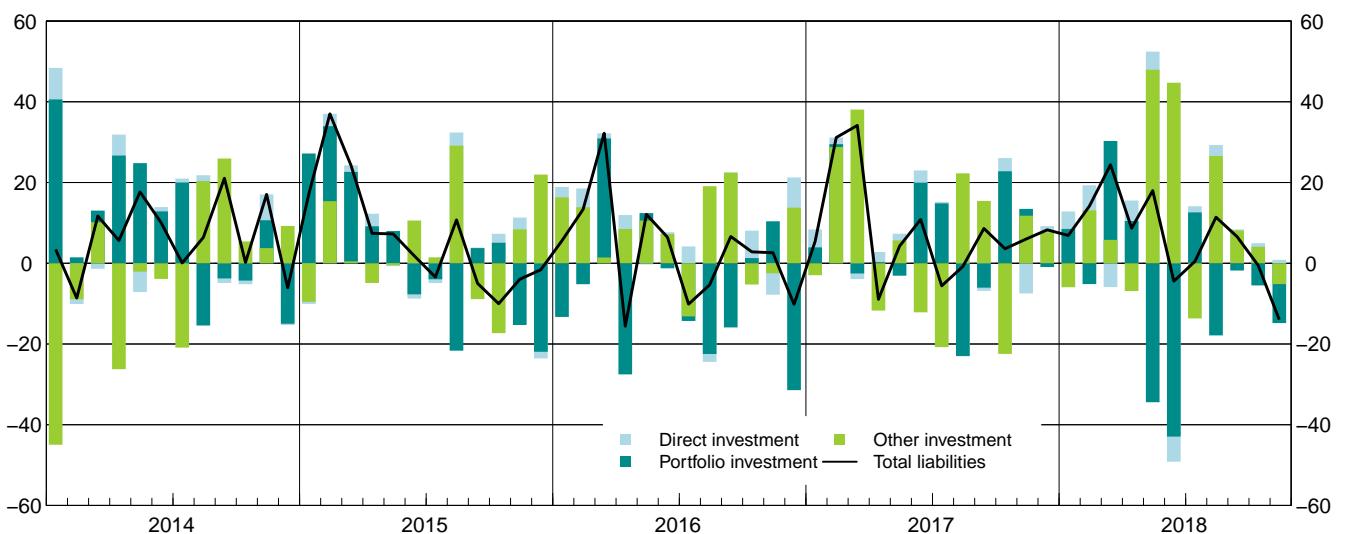

**Financial account – assets**  
(monthly flows; billions of euros)

In November 2018 foreign financial assets decreased by EUR 4.1 billion. Italian residents sold portfolio securities issued abroad by 2.9 billion (mainly long-term debt instruments), while direct investment abroad and “other investment” by Italian investors slightly increased (both by 0.2 billion). A negative balance was also recorded in financial derivatives (-2.3 billion).

**Figure 4**

**Financial account – liabilities**  
(monthly flows; billions of euros)

In November, foreign liabilities decreased by EUR 14.0 billion. Italian portfolio securities held abroad decreased by 9.7 billion (equity and, mainly, debt instruments, of which 5.4 billion were government debt securities); also “other investment” liabilities decreased by 5.2 billion. These capital outflows were only partly compensated by inward direct investment (0.8 billion).

## **General information**

- I Unless indicated otherwise, figures have been computed by the Bank of Italy.
- II Symbols and Conventions:
  - the phenomenon does not occur;
  - .... the phenomenon occurs but its value is not known;
  - .. the value is known but is nil or less than half the final digit shown.
- Figures in parentheses in roman type () are provisional. Those in parentheses in italics () are estimated.
- III The tables are identified both by a number and by an alphanumeric code that defines the content of the table in the electronic database holding the information to be released to the public. A similar code identifies the different aggregates shown in each table.

**Notice to readers**

**Revision of Italy's external statistics**

Balance of payments and international investment position data have been revised as of end-2016. Relative to preliminary data previously published in the report "Balance of Payments and International Investment Position" of last December 20th, the availability of new estimates about residents' holdings in foreign mutual fund shares has determined a downward revision of €22 billion at the end of June 2018; moreover, direct investment liabilities were increased by €5.6 billion due to corrections signaled by direct reporting enterprises. At the end of June 2018 such revisions caused a widening of the net international debtor position of about €28 billion. In the balance of payments, consistently with the new data on stocks, the financial account balance was revised downwards, by around €6 billion in 2016, by €11 billion in 2017 and by €10 billion in the first semester of 2018 with respect to the data previously published; the current account and capital account balances, instead, were broadly unchanged.

**Price-competitiveness indicators**

Starting with the report "Balance of Payments and International Investment Position" of last December 20th, a new, broader and more refined dataset relating to price-competitiveness indicators is released. For details, see the Notice to readers of the mentioned report.

## **Balance of payments and international investment position**

### **Notes to the tables**

*The order of the tables in the following notes is based on their code numbers. The notes to each table are set out below, together with references to the "Notes to the classification variables" section where appropriate.*

#### **TBP60085 - Financial account**

Italy's balance of payments data have been compiled since 2013 on the basis of the international standards laid down by the IMF's Balance of Payments and International Investment Position Manual (BPM6) and reconstructed for the earlier periods to guarantee continuity. Starting from January 2009, investment portfolio data are derived, security-by-security, as the difference of the monthly stocks of foreign securities held by residents (assets) and by nonresidents (liabilities), in quantity or nominal value, evaluated at the average price of the security in the reference period. The data sources used to calculate the stocks of foreign securities are the reports of resident custodians (mainly banks), anonymous and security-by-security, on securities held in custody on behalf of investors supplemented by the reports of resident banks and money market funds and the Bank of Italy on their own securities and by a sample survey on assets held abroad by non-bank entities.

#### **TBP60300 - Current account: balances**

The data have been compiled since 2013 on the basis of the international standards laid down by the IMF's Balance of Payments and International Investment Position Manual (BPM6) and reconstructed for the earlier periods to guarantee continuity.

#### **TBP60310 - Current account: credits**

The data have been compiled since 2013 on the basis of the international standards laid down by the IMF's Balance of Payments and International Investment Position Manual (BPM6) and reconstructed for the earlier periods to guarantee continuity.

#### **TBP60320 - Current account: debits**

The data have been compiled since 2013 on the basis of the international standards laid down by the IMF's Balance of Payments and International Investment Position Manual (BPM6) and reconstructed for the earlier periods to guarantee continuity.

#### **TBP60400 - International travel by purpose: credits, debits and balances**

Data are derived from the sample survey on Italy's international tourism, carried out by the Banca d'Italia on a continuous basis since 1996. The survey consists in questioning a sample of inbound and outbound travellers at the borders. Two main activities are carried out each year: around 150,000 face-to-face interviews in order to collect information on the travellers' expenditure and on a set of detailed traveller's characteristics and behaviour, and about 1,500,000 counting operations for disaggregating the number of travellers - drawn by administrative sources - by country of residence.

#### **TED60500 - Breakdown of external liabilities other than equity (external debt)**

The data are compiled on the basis of the sixth IMF's Balance of Payments and International Investment Position Manual (BPM6) and therefore are consistent with those related to international investment position. External debt statistics are a subset of the international investment position statistics, as the former do not include financial derivatives, equity capital and reinvested earnings. Partial misalignments between the two sets of statistics may be due to the differences in the provisional nature of the data. With effect from end-2008 data, portfolio investment stocks are calculated on the basis of an anonymous security-by-security reporting of the stocks held for investors by depositories.

## **Balance of payments and international investment position**

### **TICOM250 - Price-competitiveness indicators based on producer prices in manufacturing**

The table gives overall price-competitiveness indicators (export and import competitiveness combined) as calculated on the basis of manufacturing producer prices in 61 countries. Starting in December 2018, the set of indicators presented in the table comprises 12 countries, as Brazil, Poland and Turkey are now excluded from the group of countries for which indicators are provided; at the same time, the dissemination of new time series has begun which provide a breakdown of the indicators based on a number of attributes (outlet market; subset of competitors; distinction between import and export competitiveness). The new series are published in [Excel format](#). All the published time series are monthly and begin in January 1992. For the method of calculation see A. Felettigh and C. Giordano, [Rethinking prices and markets underlying price-competitiveness indicators](#), Banca d'Italia, Questioni di Economia e Finanza (Occasional Papers), 447, July 2018. Rounding may cause discrepancies between monthly, quarterly and annual data.

### **TIIP0200 - International investment position: net positions**

The data have been compiled since 2013 on the basis of the international standards laid down by the IMF's Balance of Payments and International Investment Position Manual (BPM6) and reconstructed for the earlier periods to guarantee continuity. Further information is included in the notes to Tables TIIP0300 e TIIP0400.

### **TIIP0300 - International investment position: assets**

The data have been compiled since 2013 on the basis of the international standards laid down by the IMF's Balance of Payments and International Investment Position Manual (BPM6) and reconstructed for the earlier periods to guarantee continuity. With effect from end-2007, Italy's international investment position is compiled on the basis of a statistical data collection and compilation system based on stock data; the series prior to end-2007 have been revised to provide continuity with the new data. With effect from end-2008 data, portfolio investment stocks are calculated on the basis of an anonymous security-by-security reporting of the stocks held for investors by depositories (as provided for in Guidelines ECB/2004/15 and ECB/2007/3).

### **TIIP0400 - International investment position: liabilities**

The data have been compiled since 2013 on the basis of the international standards laid down by the IMF's Balance of Payments and International Investment Position Manual (BPM6) and reconstructed for the earlier periods to guarantee continuity. With effect from end-2007, Italy's international investment position is compiled on the basis of a statistical data collection and compilation system based on stock data; the series prior to end-2007 have been revised to provide continuity with the new data. With effect from end-2008 data, portfolio investment stocks are calculated on the basis of an anonymous security-by-security reporting of the stocks held for investors by depositories (as provided for in Guidelines ECB/2004/15 and ECB/2007/3). Starting with the November 2013 issue of the Supplement, the external debtor position in financial derivatives of General government of Italy includes new information on transactions with foreign banks. The information became available following a cooperation agreement with the Ministry of Economy and Finance, under which new estimation methods consistent with national accounts and balance of payments definitions were developed. Since the variation in the liability side is entirely due to valuation adjustments, no corrections were made to balance of payments flows.

'Statistics' series publications are available on the Bank of Italy's site:
