Supplements to the Statistical Bulletin

Monetary and Financial Indicators

Money and Banking

New Series

Volume XXI - 8 February 2011

Number

7

NOTICE TO READERS

As of issue no. 7 of the "Supplement to the Statistical Bulletin - Money and Banking", published on 8 February 2011, new time series are published on the twelve-month rates of change of bank loans by sector and total bank deposits (Figures 2.1 and 2.2). As in the past, all rates of change are adjusted to take account of changes in exchange rates, revaluations, and statistical reclassifications. The new time series on the rate of change of bank loans are calculated including loans not stated in banks' balance sheets because securitized or otherwise sold, and excluding transactions concluded with central counterparties. The new time series on the rate of change of total deposits is calculated excluding deposits related to securitizations and loan sales, and transactions concluded with central counterparties.

The entry into force of the new Regulation ECB/2008/32 as of June 2010 and some changes to the supervisory reports have produced some breaks in the time series on loans, deposits, securities other than shares and capital and reserves. Series on total assets and total liabilities also show a statistical break in June 2010 as a consequence of these discontinuities. Interest rates have also been affected by some discontinuities due to the entry into force of Regulation ECB/2009/7.

In November 2010, the time series of outstanding amounts of deposits, interbank loans with counterparties in Italy, and the time series "capital and reserves" and "shares and other equity issued by MFIs resident in Italy" show some discontinuities due to the effects of the reorganization of major banking groups; such operations almost entirely explain the changes compared to previous months.

The new supplement has 28 tables and 6 figures and is divided into three sections:

1. monetary policy statistics;
2. banking system balance sheet items and other information;
3. banking interest rates.

The Methodological appendix describes the content of the new supplement and the changes with respect to the three earlier publications.

The series contained in the new supplement are also available on the Bank of Italy's website under Statistics/Statistical database (BIP on-line).

An extract of the information contained in the new publication will be released monthly, a few days beforehand, on the Bank of Italy's website under Statistics/Special Data Dissemination Standard (SDDS).

As of issue no. 7 of the "Supplement to the Statistical Bulletin", published on 9 February 2010, new statistics are published on securities held for safekeeping by banks (Tables 2.11 and 2.12), reported according to the reform of accounting supervisory reports that came into effect in December 2008.

Finally, starting with the Supplement to the Statistical Bulletin "Money and Banking", no. 40 - 6 August 2010, new statistics on loans and bad debts by branch of economic activity are published following the new statistical classification ATECO 2007, the Italian version of the European statistical classification NACE Rev. 2.

METHODOLOGICAL APPENDIX

GENERAL INDICATIONS

FIRST SECTION. SINGLE MONETARY POLICY STATISTICS: THE ITALIAN COMPONENTS

1.1. Introduction

The statistics describe the Italian components of the single monetary policy of the euro area. They refer to Monetary Financial Institutions (MFIs), which make up the money-issuing sector in the area. In Italy the sector includes: the Bank of Italy; banks; money market funds; electronic money institutions; and, as of September 2006, Cassa Depositi e Prestiti s.p.a. The term "other MFIs" is used for MFIs other than central banks. Money market funds (MMFs) issue units that can replace deposits in terms of liquidity and invest in transferable debt instruments with a residual life equal to or less than a year. The website of the European Central Bank contains a list, updated monthly, of the MFIs of the monetary union.

The "money-holding sector" comprises euro-area residents that are not MFIs or central government: "other general government" (local authorities and social security funds) and "other residents" (other financial institutions, including non-money market funds; insurance companies and pension funds; non-financial corporations; households; non-profit institutions serving households).

Since September 2006 Cassa Depositi e Prestiti s.p.a. has been subject to the Eurosystem's minimum reserve regime; since October 2007 the statistics have included the balance sheet data of Cassa Depositi e Prestiti s.p.a. The stock series have been affected by the reclassification of this company from "other financial institutions" to "other MFIs". Flows and growth rates are given net of the change.

For the definition of the statistics, reference can be made to ECB Regulation 2001/13 as amended and to ECB Regulation 2008/32.

The statistics cover monthly and annual end-of-period stocks and flows. For the items obtained from MFIs' balance sheets, the flows are adjusted for fluctuations in prices and exchange rates and other factors, such as the manner of accounting for loan losses and changes in the reporting population. The adjustment for fluctuations in exchange rates is applied to instruments denominated in dollars, yen, Swiss francs and pounds sterling.

Long series on the Italian monetary aggregates, the official discount rate, the official reference rate and other information are available on the Bank of Italy's website in the section: Statistics/Historical statistics/Historical data in the BIP on-line/Historical tables".

1.2. Content of the figures and tables

Figure 1.1 shows the twelve-month rates of change in the Italian contribution to the euro-area monetary aggregates. The rates of change are calculated from the differences in the stocks (delta stock), adjusted to take account of reclassifications, revaluations, changes in exchange rates and every other variation that does not originate from economic transactions. Statistical reclassifications, for example, are changes in the reporting population or the reassignment of balance sheet items; value adjustments, for example, are devaluations of loans and securities. The rates of growth of the Italian contributions to money are published excluding currency in circulation since, with the introduction of the euro, the quantity of notes and coin held in each country can no longer be measured directly.

Table 1.1 shows the consolidated balance sheet of the MFIs resident in Italy.

Tables 1.2a and 1.2b (stocks and flows) show the details of the Italian components of the monetary aggregates of the euro area. Tables 1.3a and 1.3b (stocks and flows) show the details of the counterparts. The Italian components of the monetary aggregates of the euro area refer to the liabilities of the MFIs resident in Italy and the postal funds raised from the "money-holding sector" of the euro area. The counterparts include central government. Since January 2002 a convention has been adopted for the measurement of currency in circulation (notes and coin held by the public). Under the convention each euro-area country is assigned a share of the euro banknotes proportional to the share of the ECB's capital paid up by its national central bank (the so-called Capital Share Mechanism). The euro-area countries' shares of the ECB's capital are equal to the average of each country's percentage of the total population and its percentage of total GDP. This criterion for dividing currency in circulation is based on evidence showing that the demand for banknotes is influenced to a considerable extent by the size of the population and the level of GDP. Since January 2003 currency in circulation excludes the residual amount denominated in lire; the other NCBs have taken the same decision for their own national currencies. The construction of the statistics on counterparts reflects the changes made to the monetary aggregates. In the items which show the Italian contribution to the money of the area, currency in circulation is excluded. Starting with the data for October 2007 M2 includes fixed-term and indexed postal savings certificates, which had previously been excluded from the monetary aggregates. As of the same date the series of the stocks of the monetary components and their counterparts have been affected by the reclassification of Cassa Depositi e Prestiti s.p.a. from "other financial institutions" to "other MFIs". Flows are given net of the change.

Tables 1.4a and 1.4b show the balance sheet of the Bank of Italy in accordance with the accounting layout adopted by the Eurosystem. Since 1 January 2008 the assets and liabilities of the Italian Foreign Exchange Office (UIC) have been included in the Bank's balance sheet. The flow series have been adjusted for the effects of this change. Table 1.5 shows the interest rates fixed by the Eurosystem. Table 1.6 contains data on the open-market operations carried out by the Bank of Italy on behalf of the Eurosystem. Tables 1.7a and 1.7b show the aggregates subject to the reserve requirement, the reserve maintenance and the rate of return of the reserve. Table 1.8 shows the liquidity position of the Italian banking system and the contribution to the monetary base of the area.

Tables 1.9a and 1.9b show the balance sheet of the "other MFIs" resident in Italy, i.e. the MFIs other than the Bank of Italy.

Figure 1.2 shows the twelve-month rates of change in total credit and total domestic credit. Total credit includes the loans of MFIs, resident both in Italy and abroad, to "other residents", debt securities issued by "other residents" and Italian general government debt. Total domestic credit excludes the total credit financed from abroad. The individual components of total credit and total domestic credit are shown in Table 1.10. Italian general government debt is shown at face value. For the items obtained from MFIs' balance sheets the rates of change have been adjusted to take account of reclassifications, revaluations, changes in exchange rates and every other variation that does not originate from economic transactions, as for Figure 1.1. The rates of change are not adjusted for the effect of loan sales and securitization.

SECOND SECTION. BANKS: BALANCE SHEET AND OTHER INFORMATION

2.1 Introduction

The statistics refer to all the banks resident in Italy and, as of October 2007, to Cassa Depositi e Prestiti s.p.a. The statistics are distinguished in the section on the basis of the residence of the counterpart of the operations: residents in Italy, other euro-area countries and the rest of the world.

Tables 2.1-2.4 contain statistics harmonized according to the ESCB standards. For more details in this respect, see the document "L'armonizzazione delle statistiche bancarie europee e i riflessi sull'Italia", Banca d'Italia, Supplementi al Bollettino Statistico - Note metodologiche e informazioni statistiche, February 2000. Banks have been producing statistics harmonized at European level since June 1998. For the period from December 1995 to May 1998 the information is partially estimated on the basis of data available in automated prudential returns and foreign exchange reports.

The statistics shown in Tables 2.5-2.11 are not harmonized at European level.

2.2 Definition of the items

The balance sheet items refer to end-of-period stocks.

In addition to performing loans, the item "loans" contains bad debts and assets in the form of repos.

Listed securities belonging to the portfolio not held as financial fixed assets are reported at the fair value of the last trading day of the month the report refers to; other securities are reported at book value. The item "securities other than shares" includes unlisted debt securities and debt securities held to maturity.

"Equity holdings" are stated gross of the corresponding provisions for diminution in value.

The item "fixed assets" refers to movables, buildings, fixed assets to be leased and intangible fixed assets.

"Deposits" comprise overnight deposits, deposits with agreed maturity and redeemable at notice, and liabilities in the form of repos. Overnight deposits include banker's drafts but do not include tied accounts. Deposits with agreed maturity include certificates of deposit, tied accounts and tied savings deposits; they also include the issue of subordinated loans. Deposits redeemable at notice include free savings deposits and, as of the data for October 2007, the various forms of postal deposit of Cassa Depositi e Prestiti.

"Debt securities issued" are recorded at face value and include the issue of subordinated liabilities. From December 2000 onwards the series includes reverse convertibles among the securities issued with maturity up to two years.

The item "capital and reserves" comprises share capital, reserves and the balance of prior year surpluses and losses. Since June 2010, this item includes loan loss provisions previously itemized in the remaining liabilities.

The items "other assets" and "other liabilities" include the premiums on options and variation margins in respect of financial derivatives. Normally, the latter are considered as off-balance-sheet positions and not as items included among the assets of the banking system.

2.3 Content of the figures and tables

Figures 2.1 and 2.2 show the twelve-month rates of change of bank loans by sector and of bank fund raising. The figures refer to the business of banks resident in Italy with counterparties resident in Italy. The private sector includes households, non-profit institutions, non-financial corporations, insurance corporations, pension funds and the other financial institutions. The rates of change are calculated from the differences in the stocks (delta stock), adjusted to take account of reclassifications, revaluations, changes in exchange rates and every other variation that does not originate from an economic transaction. Statistical reclassifications include, for example, changes in the reporting population and the reassignment of balance sheet items; value adjustments include, for example, writedowns of loans. The time series on the rate of change of bank loans are calculated including loans not stated in banks' balance sheets because securitized or otherwise sold; this component is partially estimated up to May 2010. Only for total loans to the private sector, Figure 2.1 shows two time series of the rate of change: the first is not adjusted (i.e. it does not include loans not stated in banks' balance sheets because securitized or otherwise sold, and includes transactions concluded with central counterparties); the second is adjusted, i.e. includes loans not stated in banks' balance sheets because securitized or otherwise sold, and excludes transactions concluded with central counterparties. In November 2008 the figures for loans with maturity up to one year and overnight deposits were influenced by the postponement to 1 December of the payment of the second payment on account of self-assessed taxes due to the fact that the deadline of 30 November fell on a Sunday. If this had not been the case, the rate of growth in loans would have been higher and that of deposits lower. The time series on total deposits' change rate is calculated excluding transactions concluded with central counterparties and excluding deposits related to securitizations and loan sales (namely, those liabilities that are "Counterparts of loans and/or other assets" disposed of in a securitization but still recognized on the statistical balance sheet, by convention, among deposits with agreed maturity over two years, as specified in Regulation ECB/2008/32; and those liabilities related to bonds connected with their own securitization not derecognized).

Tables 2.1a and 2.1b summarize the main asset and liability items of the balance sheet.

Table 2.2 provides details of the euro fund-raising of the money-holding sector. The difference between Table 2.2 and Table 2.1 is that the latter shows fund-raising in all currencies.

Table 2.3 shows loans broken down according to the sector the borrower belong to. The statistics are based on the ESA95 sectorization. In October 2008 deposits of banks resident in Italy (Table 2.1b) and loans to banks resident in Italy (Tables 2.1a and 2.3) were affected by the operations of reorganization carried out between banks belonging to the same group. These operations almost entirely explain the changes with respect to the previous month. In November 2010, the time series of outstanding amounts of deposits, interbank loans with counterparties in Italy, and the time series "capital and reserve" and "shares and other equity issued by MFIs resident in Italy" show some discontinuities due to the effects of the reorganization of major banking groups; such transactions almost entirely explain the changes compared to previous months.

Table 2.4 shows loans to households according to their type and maturity and those to non-financial corporations according to their maturity. Non-profit institutions are included among households.

Table 2.5 shows bad debts according to the sector debtors resident in Italy belong to. The estimated realizable value of banks' bad debts is shown net of writeoffs of bad debts from loans. The entry into force of the new supervisory returns "as of December 2008" has caused a break in the statistical series. The new series are provided starting from December 2008.

Tables 2.6 and 2.7 show the one-month rates of growth in banks' fund-raising, loans by maturity and securities portfolio. The technical forms of deposits are net of central government deposits. The one-month rates of growth are calculated net of the changes due to reclassifications, revaluations, changes in exchange rates and every other variation that does not originate from economic transactions. The rates of change are not adjusted to take account of loan sales or securitizations. The one-month percentage changes are expressed on an annual basis and calculated on seasonally-adjusted data where appropriate. For a description of the seasonal-adjustment procedure and the criteria underlying the policy for revising seasonally-adjusted data, see the document "Seasonal Adjustment of Bank Deposits and Loans", available on the Bank's website. The data for the last month are provisional and partly estimated.

Tables 2.8 and 2.9 show loans and bad debts broken down according to the branches of economic activity into which credit to producer households and non-financial corporations is divided. Starting with the Supplement to the Statistical Bulletin "Money and Banking", no. 40 - 6 August 2010, the new statistical classification ATECO 2007, the Italian version of the European statistical classification NACE Rev. 2 adopted under Regulation (EC) No 1893/2006, replaces the previous classification ATECO 1981. The 25 branches in Tables 2.8 and 2.9 correspond to the maximum level of aggregation of the ATECO 2007 classification into sections. For the "Manufacturing" branch only (Section C in the ATECO 2007 classification), a further breakdown into 11 subgroups is provided. For some branches, data before June 2010 are partly estimated. Previous time series, based on ATECO 1981 and available from June 1998 to May 2010, are available on the Bank of Italy's website at the following address: Statistics/Statistical Database (BIP on-line)/Money and Banking/Tables no longer produced.

Table 2.10 provides the breakdown by type of security, other than shares, held in banks' portfolios. On the basis of the definition contained in the automated prudential returns that entered into force with the data referring to December 2008 (Circular no. 272 of 30 July 2008), listed securities belonging to the portfolio not held as financial fixed assets are reported at the fair value of the last trading day of the month the report refers to; other securities are reported at book value. The item "securities other than shares" includes unlisted debt securities and debt securities held to maturity. In earlier publications the securities portfolio was shown at book value in the section devoted to non-harmonized statistics. Here again, to avoid discontinuities in the series, they have been reconstructed from June 1998 onwards, using estimates where necessary.

Tables 2.11 and 2.12 show respectively the sectors holding securities kept for safekeeping at banks and the financial instruments held. Table 2.11 refers only to debt instruments, while Table 2.12 refers to debt and capital instruments. Securities are reported at face value for Table 2.11 and at fair value for Table 2.12 and do not include those deposited by banks and central banks. The rest of the world includes the holdings of residents of other euro area countries.

THIRD SECTION. BANKS: INTEREST RATES

3.1 Introduction

The section contains information on the interest rates applied by Italian banks and, since October 2007 for ESCB harmonized interest rates, by Cassa Depositi e Prestiti S.p.A.

Figures 3.1 and 3.2 and Tables 3.1-3.5 contain ESCB harmonized statistics on euro deposits and loans to euro-area households and non-financial corporations. The harmonized statistics have been obtained since January 2003 through a sample survey in accordance with ECB Regulation 2001/18. At the end of 2009 the sample consisted of 116 banks, accounting for 79 per cent of the loans and 85 per cent of the deposits of the Italian banking system. At each reference date the sample reflects any mergers and spinoffs that have occurred. The interest rate refers to outstanding amounts and new business for the main forms of funding and lending. New business consists of loan contracts concluded during the reporting period or for which previously established terms and conditions have been renegotiated. Households include producer households and non-profit institutions serving households.

For details on the method of data collection and the sample selection criteria, see "The Harmonization of European Statistics on Bank Interest Rates and the Methodology Adopted by Italy", Bank of Italy, Supplements to the Statistical Bulletin - Methodological Notes and Statistical Information, October 2003. The accuracy of the sample survey is documented in "The Measurement of Sampling Error in Bank Interest Rate Statistics", Bank of Italy, Supplements to the Statistical Bulletin - Methodological Notes, June 2007.

For the interest rates that are particularly significant in the Italian banking system, the harmonized series have also been estimated for past periods, generally back to 1995. The methodology is described in "Estimating Time-Series of Harmonized Bank Interest Rates", Bank of Italy, Supplements to the Statistical Bulletin - Methodological Notes, February 2006.

The first part of Table 3.6 contains the interest rates on bank bonds and on short-term bank loans; the data are taken from ten-day reports. The ten-day survey is based on a sample of intermediaries that is rendered consistent with the sample that reports the harmonized data. Since June 2010 the interest rates on bank bonds have been calculated excluding the issues intended for subscription by members of the reporting bank's group. The second part of Table 3.6 contains interbank rates as reported by the Interbank Deposit Market (MID), calculated as the arithmetic average of the weighted average rates of daily turnover on MID.

3.2 Definition of the items

The average harmonized interest rates are constructed as the weighted average of the rates on the different instruments by maturity and amount; the weights are given by respective amounts of the various instruments. With regard to the average rates on new business, the frequency of turnover of deposits and loans, higher in the case of instruments with a shorter maturity, can influence the aggregate rate.

In the case of "new business", the rates are weighted by the amount of the disbursements. In the case of outstanding amounts, the rates are weighted by the account balances at the end of reference month. Overdrafts are not counted in new business for the purposes of reporting the harmonized rates; they are counted in the outstanding amounts of loans with a maturity of up to one year and in the interest rates obtained as a weighted average when these include this segment. Advances against bills, other credit instruments and uncleared documents, and factoring advances are treated as overdrafts. The amount classes refer to the amount of the individual transaction and not to the bank's entire creditor position with the borrower. The disaggregation by maturity refers to the initial period of interest rate fixation, i.e. the period of time during which no contractual provision is made for a change in the interest rate. The rates include those on supported loans, for which the total interest rate must be reported, regardless of how much the customer pays. By contrast, the rates on bad debts and restructured loans are excluded. Loans "for other uses" comprise repos, advances on invoices and other secured loans. The annual percentage rate of charge (APRC) includes accessory expenses (administrative, application processing, insurance) provided for in Directive 87/102/EEC. The item "Consumer credit and other loans", determined only for the rates on outstanding amounts, comprises overdrafts, repos, advances against invoices and other secured loans.

Since June 2010 harmonized statistics on interest rates have been modified in accordance with Regulation ECB/2009/7; these changes and the revision of the sample of banks caused some discontinuities in the time series. The main methodological

innovation is that bad loans (not to be included in the weighted interest rates) are now defined in accordance with Annex II to Regulation ECB/2008/32 and include loans in respect of which repayment is overdue or otherwise identified as being impaired, either partially or totally. Since June 2010, a further innovation is that interest rates on new business exclude extended credit card credit and revolving loans that are now included in the statistics on interest rates on overdrafts. Revolving loans are loans that have all the following features: 1. The borrower may use or withdraw funds up to a pre-approved credit limit without giving prior notice to the lender; 2. The amount of available credit can increase and decrease as funds are borrowed and repaid; 3. The credit may be used repeatedly; 4. There is no obligation of regular repayment of funds. The revision of the sample of banks has affected mainly interest rates statistics on deposits.

REVISION OF THE DATA

In principle the data revision policy observed in this publication follows the ECB Guidelines on monetary and banking statistics (available at www.ecb.int). The data for the last available month are provisional; revisions of these statistics are classified as ordinary revisions in the lexicon of the European System of Central Banks. Any revisions for periods other than the last month are classified as extraordinary revisions and are generally incorporated into the publication upon transmission from the reporting institutions. The impact of revisions on the aggregates is negligible in the majority of cases; where it is not, the reasons for the revisions are specified in this Appendix. The estimated values of the time series may be revised in the future.

THE NEW STATISTICS ON BANK BALANCE SHEETS SINCE JUNE 2010

The entry into force of the new Regulation ECB/2008/32 as of June 2010 and some changes to the supervisory reports have produced some breaks in the time series on loans, deposits, securities other than shares and capital and reserves. Series on total assets and total liabilities also show a statistical break in June 2010 as a consequence of these discontinuities. In more detail time series on loans include securitized, or otherwise transferred, loans which do not satisfy the criteria for derecognition as established in the international accounting standard IAS 39. The adoption of these criteria implied the re-recognition of assets that had previously been cancelled from the balance sheet, with a corresponding increase in some time series. Breaks in time series affect both Sections 1 and 2 of this Supplement.

In Section 1, the main items concerned are the following: "Loans to euro-area residents" (Table 1.1a - code TAM10100); "Finance to other residents" (Table 1.3a - code TAM10300); "Loans to residents of Italy" (Table 1.9a - code TAM10900); "Bank loans" (Table 1.10a - code TAM11000). In Section 2, the main items interested by discontinuities are: "Loans to residents of Italy" (Table 2.1a - code TSC20100); Breakdowns of loans by maturity, sector and type in Tables 2.3 and 2.4 (codes TSC20300 and TSC20400).

Since June 2010, securities other than shares held by banks include the asset-backed securities bought back by the same bank when the securitized loans have not been derecognized from the balance sheets. Previous rules implied that only a small part of these securities were included in the banks' portfolios. This series is now available in Table 2.10 (code TSC21000). Also since June 2010, securitization liabilities that are "Counterpart of loans and/or other assets" disposed of in a securitization but still recognized on the statistical balance sheet are included, by convention, among deposits with agreed maturity over two years, as specified in Regulation ECB/2008/32. This series is now available in Table 2.2 (code TSC20200). In the table 1.7a (code TAM10700) the item "deposits with agreed maturity over two years" includes liabilities related to securitisations (approximately 38 billions of euros in June 2010) but excludes those related to bonds connected with their own securitisation not derecognised.

The overall impact on the total balance sheet of the methodological changes discussed above is approximately 150.8 billion of euros. A summary table of the breaks in the time series in June 2010 is provided below.

GENERAL INFORMATION

- I - Unless indicated otherwise, figures have been computed by the Bank of Italy.
- II - Symbols and Conventions:
- the phenomenon in question does not occur;
 - the phenomenon occurs but its value is not known;
 - .. the value is known but is nil or less than half the final digit shown.
- Figures in parentheses in roman type () are provisional, those in parentheses in italics () are estimated.
- III - The tables are identified both by a number and by an alphanumeric code that defines the content of the table in the database in the electronic archive in which information to be released to the public is held. A similar code identifies the different aggregates shown in each table.
- IV - The methodological notes in the last part of the Supplement are identified by electronic codes that refer to the tables and, within each table, to the individual aggregates. Notes that refer to a single observation are also identified by the date of that observation.

SUPPLEMENTS TO THE STATISTICAL BULLETIN
