## €coin falls slightly in May

- In May €coin fell slightly, to 0.26 from 0.28 in April, recording its fourth consecutive decline.
- The indicator was mainly affected by the slowdown in industry, together with the persistent weakness of price developments.
- The **€coin** indicator developed by the Bank of Italy provides a summary index of the current economic situation in the euro area. The indicator is an estimate of quarterly GDP growth shorn of the most erratic components (seasonal variations, measurement errors and short-run volatility). **€coin** is published monthly by the Bank of Italy and CEPR.
- Next **€coin** release dates: **Thursday 30 June** and **Friday 29 July** (preliminary).

## €coin and euro-area GDP – May 2016

Sources: Bank of Italy and Eurostat.

**€coin** collates data from a large set of macroeconomic time series (industrial production indices, business surveys, demand indicators, stock market indices and more). It extracts the information that is relevant to tracking underlying GDP trends for the entire area.

The **€coin** estimate is timely, leading Eurostat's official release of the area-wide GDP growth figure by several months. And it provides a reasonably close anticipation of the quarterly growth rate net of the more volatile components. The estimate of underlying growth trends by **€coin** has two key advantages:

- (i) monthly frequency, with release several months ahead of the official euro-area GDP estimate;
- (ii) immunity to the short-term fluctuations and measurement errors that mark quarterly output growth; that is, the index figure is an indicator of the euro area's actual growth momentum.

**The following table shows the performance of the €coin indicator over the last year:**

Month	€COIN
May 2015	0.38
June 2015	0.39
July 2015	0.41
