€-coin holds steady in June

- €-coin was unchanged from the previous month, at 0.26 in June, continuing to signal modest growth in the euro area.
- The slight recovery in business confidence in services and construction was countered by the decline in industrial production.
- The **€-coin** indicator developed by Banca d'Italia provides a summary index of the current economic situation in the euro area. The indicator is an estimate of quarterly GDP growth shorn of the most erratic components (seasonal variations, measurement errors and short-run volatility). **€-coin** is published monthly by Banca d'Italia and CEPR.
- The next publication dates for €-coin are **Monday, 4 August 2025** and **Wednesday, 3 September 2025** (to be confirmed).

Source: Banca d'Italia and Eurostat.

Note: The €-coin series is based on the real time estimates of the indicator at a given date and hence the series is not revised. On the other hand, the GDP growth rates are calculated on the basis of Eurostat's most recently published series and do reflect any changes in the historical data.

€-coin is constructed monthly by exploiting a vast set of macroeconomic time series (e.g. industrial production indices, business and household surveys, demand indicators, and stock market indices) in order to extract the data needed to estimate the underlying trend of euro-area GDP growth.

€-coin precedes by several months the official euro-area GDP figure released by Eurostat and gives an early indication of the trend net of any erratic or short-term components.

The following table shows the performance of the €-coin indicator over the last year:

| Month | €-COIN |
