## €-coin decreases in May

- **€-coin** fell in May (from 0.52 to 0.45).
- The indicator was affected by the low levels of consumer and business confidence, partly due to weakening demand and to pressures on supply chains.
- The **€-coin** indicator developed by Banca d'Italia provides a summary index of the current economic situation in the euro area. The indicator is an estimate of quarterly GDP growth shorn of the most erratic components (seasonal variations, measurement errors and short-run volatility). **€-coin** is published monthly by Banca d'Italia<sup>1</sup> and CEPR.
- The next publication dates for **€-coin** are **Thursday, 2 July** and **Tuesday, 4 August** (to be confirmed).

## €-coin and euro-area GDP

Sources: Banca d'Italia and Eurostat.

Note: The €-coin series is based on the real time estimates of the indicator at a given date and therefore the series is not revised. On the other hand, the GDP growth rates are calculated on the basis of Eurostat's most recently published series and do reflect any changes in the historical data.

**€-coin** is constructed monthly by using a vast set of macroeconomic time series (e.g. industrial production indices, business and household surveys, demand indicators, and stock market indices) in order to extract the data needed to estimate the underlying trend of euro-area GDP growth.

**€-coin** precedes the official euro-area GDP figure released by Eurostat by several months and gives an early indication of the trend net of any erratic or short-term components.

**The following table shows the performance of the €-coin indicator over the last year:**
