

OCTOBER 21, 2019

ML & AI at the Bank of Canada

*Banca d'Italia Workshop on Big Data and Machine
Learning Applications for Central Banks*

Joseph Hickey (Data Scientist)

Patrick Labelle (Statistical Team Lead)

Bank of Canada – State of ML/AI

- Siloed efforts to employ ML/AI
- Emphasis on experimentation
- Varying levels of maturity across business lines
- Need for enterprise wide strategies and solutions
 - › Digital @ the Bank
 - › Enterprise Data and Analytics Strategy

Digital @ the Bank
"Becoming a 'Digital First' central bank"

EDAS
"Be the leading central bank in the adoption of advanced analytics and use of data"

Understand the implications of digitalization for the economy

Improve our analysis, decision making and operations by embedding a culture of **digital-first**

Leverage **data** to improve decision making, business insights and operational efficiency.

Enable and promote the responsible and secure use of data.

ML & AI

Enterprise Value

Big Data

Projects

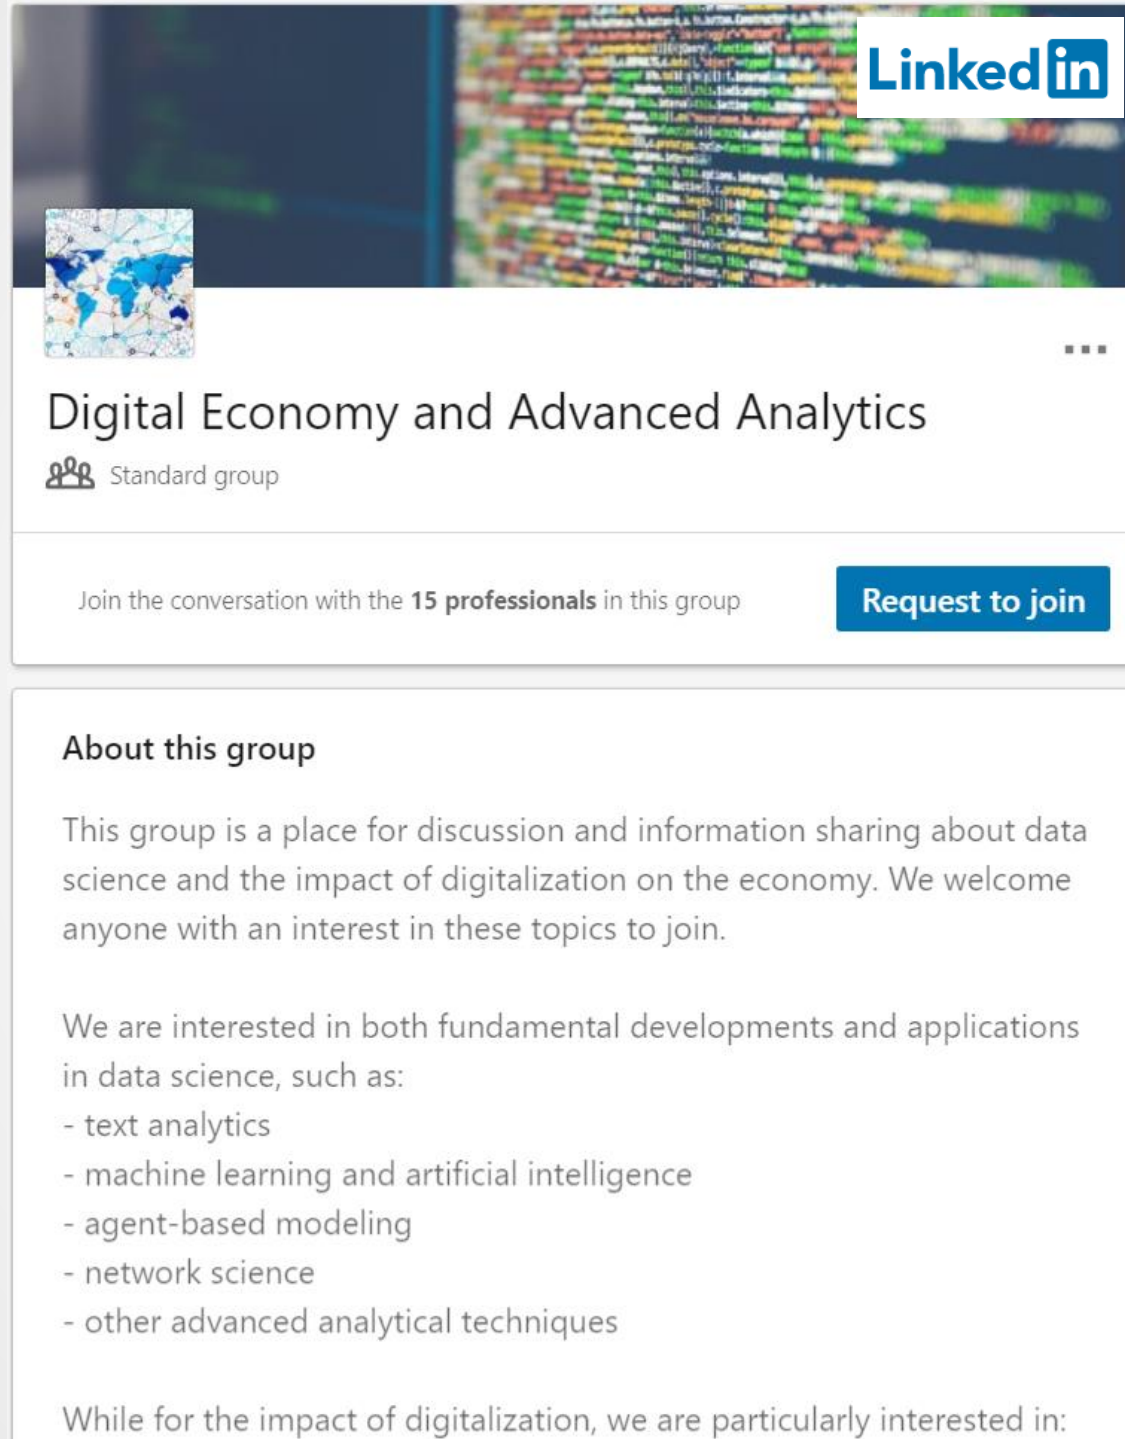

Bank of Canada-wide

- Digital currency
 - › Implications of central bank digital currency on the financial system and wider economy
- FinTech
 - › Exploring how distributed ledger technology affects payment systems
- Text analytics
 - › Assessing Chinese labour market conditions using newspaper text (Bailliu et al., 2019)
- Reinforcement learning in large-value payment systems
- Using microdata to measure consumer credit stress

Digital Economy and Advanced Analytics group

- Text analytics and machine learning
 - › Extracting uncertainty and sentiment measures from BoC Monetary Policy Reports (Binette & Tchebotarev, 2019)
 - › Creating an indicator of Canadian mining sector activity from newspaper articles
 - › Predicting macroeconomic indicators from alternative time series data (e.g. media)
- Network analysis and agent-based models
 - › Inter-nation sentiment network as assessed from media articles: predictor of trade developments?
 - › ABMs giving rise to emergent properties, e.g. market share structure in set of competing service providers
- Digital economy
 - › Internet economy, labour dynamics, inflation, and international trade

LinkedIn group

The image shows a screenshot of a LinkedIn group page. At the top, there is a header banner with a blurred background of code and a world map. The LinkedIn logo is in the top right corner. Below the banner is a profile picture of a world map and a three-dot menu icon. The group name is 'Digital Economy and Advanced Analytics' and it is a 'Standard group'. A blue button says 'Request to join'. Below this, the 'About this group' section contains text about data science and a list of topics of interest.

About this group

This group is a place for discussion and information sharing about data science and the impact of digitalization on the economy. We welcome anyone with an interest in these topics to join.

We are interested in both fundamental developments and applications in data science, such as:

- text analytics
- machine learning and artificial intelligence
- agent-based modeling
- network science
- other advanced analytical techniques

While for the impact of digitalization, we are particularly interested in:

TO JOIN:

1. Send email: jhickey@bankofcanada.ca

OR

2. Search on LinkedIn for: *"Digital Economy and Advanced Analytics"*
