The views in this paper are the authors' and do not necessarily represent the views or policies of the Board of Governors of the Federal Reserve System or its staff.

The Welfare and Equity Effects of Carbon-Tax

Carbon tax discussed as way to reduce greenhouse gas emissions

- Generates revenue: leads to multiple policy options
 - What to do with revenue?
- How to evaluate the policies?
 - Maximizing expected utility (implicitly includes inequality)
 - Tax itself is regressive: source of public resistance
 - Can redistribute tax revenue to unwind regressivity

Question: Can carbon tax raise welfare and reduce inequality?

Motivation and Findings

Previous findings:

- Double Dividend
 - Maximize welfare: unwind current distortionary tax (capital/labor)
 - Tends to exacerbate inequality
- Lump-sum rebates
 - Unwinds inequality but reduces welfare

Our findings:

- Policy can achieve Triple Dividend
 - Increase welfare and reduce inequality
 - Lower capital tax and increase labor tax progressivity
- Previous Research: more parsimonious set of instruments
 - Do not examine using combination of policies
 - Do not consider labor tax progressivity

Model

General Equilibrium heterogenous life cycle model

- Idiosyncratic labor productivity shocks
- Consume energy and generic good

Production: two sectors

- Energy production
 - Use capital and labor
- 2 Non-energy production
 - Use capital, labor, and energy

Government

• Raises revenue for consumption (w/ taxes)

Runs social security program

Energy Consumption

Energy Expenditure Share

Energy expenditure share falls with expenditures

Energy Consumption

• Utility function:
$$U(\tilde{c}, h) = \frac{\tilde{c}^{1-\sigma_1}}{1-\sigma_1} - \chi \frac{h^{1+\frac{1}{\sigma_2}}}{1+\frac{1}{\sigma_2}}$$

•
$$ilde{c}=c^{\gamma}(e^{c}-ar{e})^{1-\gamma}$$

- c generic consumption
- e^c household energy consumption
- *ē*: "subsistence energy"

Calibrate:

- γ : average energy budget share
- ē: decline in expenditure share on energy
- calibrate to match the average energy share and slope

Production

Two production technologies:

Energy production: $E = A_e K_e^{\alpha_e} N_e^{1-\alpha_e}$

Non-energy production: $Y = A_{ne} K_{ne}^{\alpha_{ne}} N_{ne}^{1-\alpha_{ne}-\psi} E_{p}^{\psi}$

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

Government

- Government consumption
 - 15.5% of output
- Tax income to raise revenue
 - Flat tax on capital of 36% (τ_k)
 - Progressive labor tax = $(1 \lambda_1 rac{\mathsf{income}}{\mathsf{avg. income}}^{-\lambda_2})\mathsf{income}$

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

Experiment

Experiment

- Introduce carbon tax set at \$35 per ton CO_2
- Rebate revenue through multiple sources
 - **1** Reduce capital tax (τ_k)
 - **2** Equal lump sum rebate (Υ_1)
 - **3** Reduce average labor tax (λ_1)
 - 4 Increase progressive labor tax (λ_2)
 - **5** Progressive lump sum rebate $(max[\Upsilon 1 \Upsilon_2 \text{ total income,0}])$

- Parsimonious set: only 1-3
- Rigorous set: add 4, 5, and combination of rebates
- Rebating carbon revenue: no increase of taxes (i.e. progressive)

Parsimonious Policies

With limited policies: increase welfare or decrease inequality

・ロト ・聞ト ・ヨト ・ヨト

э

What if we allow more policy instruments?

- Add progressive labor tax, progressive lump sum, and combinations of policies
- For each change in equality find welfare maximizing policy

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

 $\bullet \ \Rightarrow \ {\rm welfare \ equality \ frontier}$

Rigorous Policy Frontier

Additional policies: much better outcome

Rigorous Policy Frontier

Can simultaneously increase equality and welfare

What Policies on Frontier

э

Rebate with progressive parameter and capital_tax ,

What Policies on Frontier

To reduce inequality: increase progressivity parameter

What Policies on Frontier

Leaves less to rebate with capital tax

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 三臣 - のへで

Welfare (CEV):

- Percent change in expected per-period consumption
- Decompose into three parts:
 - **1** Level effect: difference in welfare from change in aggregate consumption and hours

- **2** Age effect: difference in welfare from change in average consumption and hours across ages
- **3 Distribution effect:** residual change which is largely difference in distribution of consumption and hours

(日)、

æ

Overall welfare gains:

- LHS: level dominates
- RHS: distribution dominates

(日)、

э

Slope:

• Age and distribution dominate level

э

Level:

- LHS: Unwinding capital tax reduces distortions
- Moving to RHS: ↑ capital tax ↑ distorts economy

Age:

- LHS:
 - Higher interest rate (steeper consumption profile
- Moving to RHS:
 - Decrease after-tax return (flatter consumption profile)
 - Lower burden when young (reducing liquidity constraints)

Distribution: progressive tax reduces inequality \Uparrow welfare

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 三臣 - のへで

Lifecycle and heterogeneity

Lifecycle and heterogeneity important:

• More equal outcome improves welfare from distribution effect

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

· Also leads to increase in welfare from age effect

Policy Frontier

What if labor progressivity cannot be used?

(日)、

э

Different Sources of Welfare Gain

Level: much steeper decline b/c lump sum crowds out capital

(日)、

Different Sources of Welfare Gain

Age:

- Higher after-tax return (steeper consumption profile)
- Lump sum less effective at lowering young tax burden

Different Sources of Welfare Gain

Distribution: fairly similar

Conclusion

- Carbon tax can raise welfare and reduce inequality
 - Progressive labor tax improves allocation over lifetime decreases inequality

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

- Different findings than previous studies
 - Allow for more rigorous rebate schemes
 - Including heterogeneity and life cycle
