

# Balance of Payments and International Investment Position

19 November 2020

For further information: [statistiche@bancaitalia.it](mailto:statistiche@bancaitalia.it)  
[www.bancaditalia.it/statistics/index.html](http://www.bancaditalia.it/statistics/index.html)

**Current account: 12-month cumulated balances**  
(billions of euros)

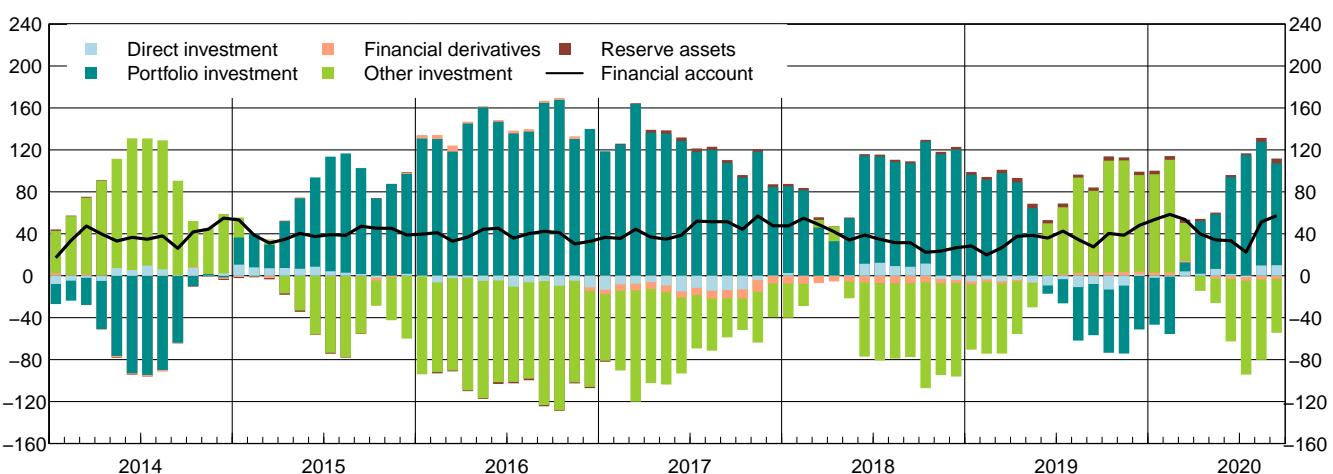

Figure 1

In the twelve months ending in September 2020 the current account surplus amounted to EUR 57.0 billion (equivalent to 3.4 per cent of GDP), from 45.7 billion in the corresponding period of 2019. The improvement was almost entirely due to the widening of the goods surplus (63.7 billion, from 50.6), which offset the worsening in the services deficit (-7.0 billion, from -2.1); the primary income surplus slightly increased (18.9 billion, from 16.4). In September the tourism surplus (2.2 billion) is just slightly lower than the level prevailing in the same month of the previous year (2.4 billion).

**Financial account: 12-month cumulated balances**  
(billions of euros)

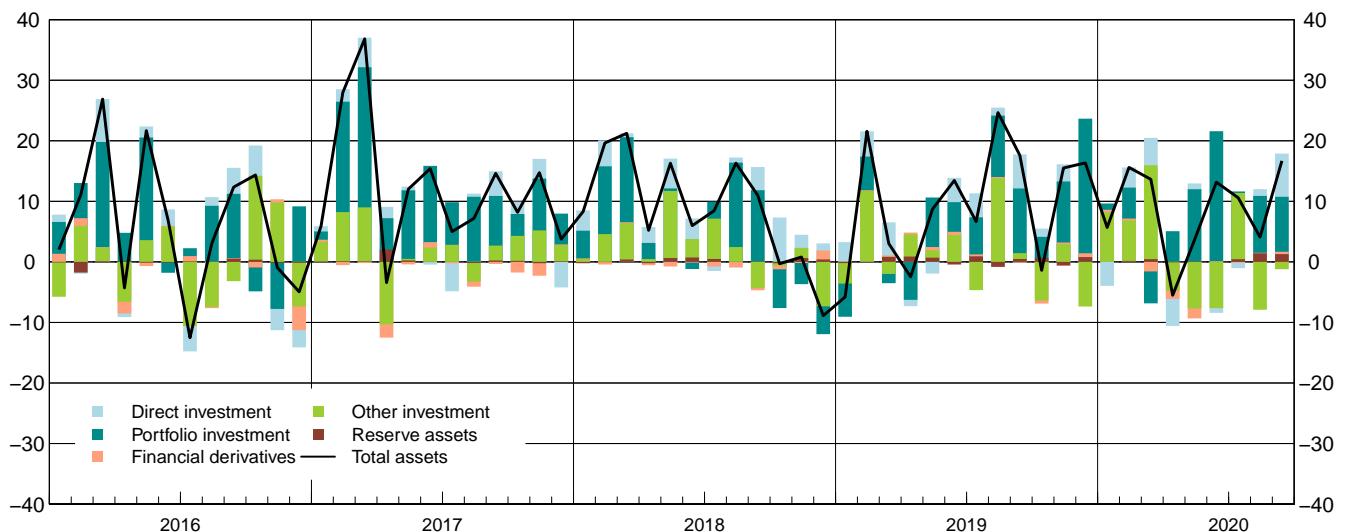

Figure 2

In the twelve months ending in September 2020 in the financial account net acquisitions of foreign assets amounted to 57.3 billion (from 27.5 billion in the corresponding period of 2019). The balances for portfolio investment and direct investment were positive (97.1 and 10.1 billion respectively), whereas the balances were negative for "other investment" (-51.5 billion) and derivatives (-3.0 billion).

**Figure 3**

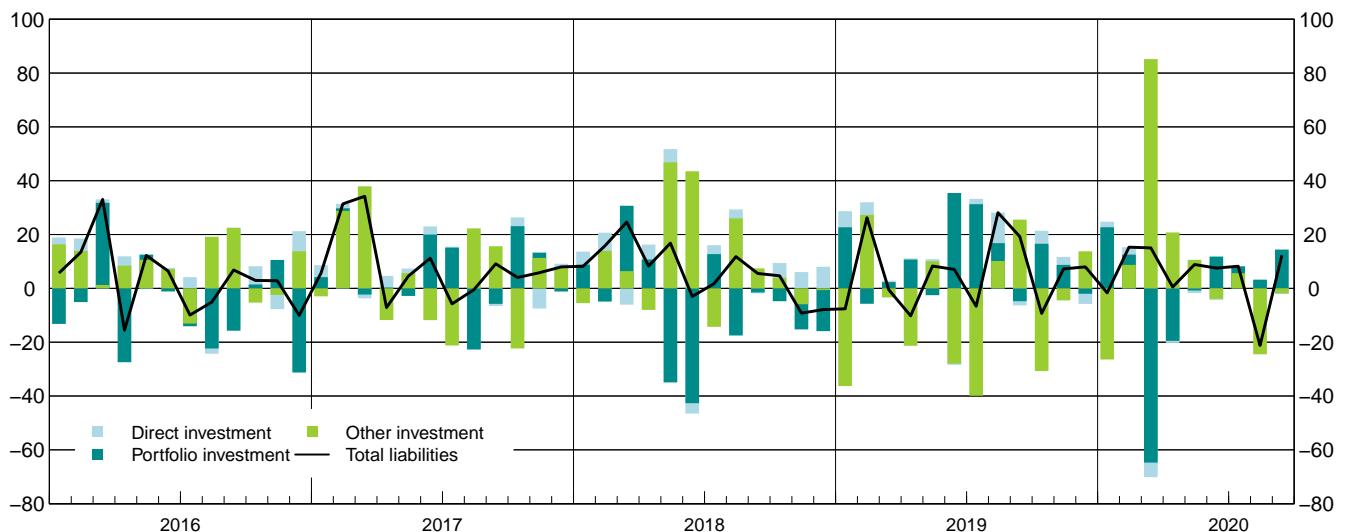

**Financial account – assets**  
(monthly flows; billions of euros)

In September net acquisitions of external financial assets amounted to 16.7 billion. Italian residents increased portfolio investment by 9.1 billion and direct investment by 7.1 billion; "other investment" assets fell instead by 1.2 billion.

**Figure 4**

**Financial account – liabilities**  
(monthly flows; billions of euros)

In September 2020 net incurrence of external liabilities increased by 12.3 billion. Foreign investments in Italian portfolio securities increased by 14.4 billion (almost entirely issued by the public sector). "Other investment" liabilities slightly decreased (1.8 billion); the increase in Bank of Italy's debtor position on TARGET2 (23.4 billion) was partly offset by the decrease in banks' external liabilities (-18.7 billion).

Reference period: September 2020

## **Balance of payments and international investment position**

### **Notice to readers**

#### **Compilation of Italy's external statistics**

The ongoing public health emergency is creating problems in the collection of the elementary data that represent the input for the compilation of the balance of payments and international investment position. In order to ensure continuity and to preserve the quality of the statistical production, solutions and corrective actions have been identified, hence allowing the processing and dissemination of data. As is standard, the provisional data provided with this publication will be subject to revision in future releases, when additional statistical sources become available. These revisions may be of a greater extent than normal.

From data referring to March 2020, the main difficulties for the compilation of statistics are concentrated in the current account items and substantially concern three aspects: i) the absence of some statistical sources (for example the survey on international tourism, initially suspended due to the emergency and partially resumed in July); ii) the lower response rate of the reporting agents in the surveys conducted by the Bank of Italy; iii) the impossibility of using standard forecasting models to estimate the provisional data.

The solutions and the corrective actions adopted were based on the use of alternative sources (for example, data from mobile telephones, airport traffic and bilateral data for the estimation of the travel item), the application of accurate imputation techniques for missing answers and the formulation of estimation models exploiting auxiliary information capable of adequately representing the size of the current phenomena.

## **General information**

- I Unless indicated otherwise, figures have been computed by the Bank of Italy.
- II Symbols and Conventions:
  - the phenomenon does not occur;
  - .... the phenomenon occurs but its value is not known;
  - .. the value is known but is nil or less than half the final digit shown.
- Figures in parentheses in roman type () are provisional. Those in parentheses in italics () are estimated.
- III The tables are identified both by a number and by an alphanumeric code that defines the content of the table in the electronic database holding the information to be released to the public. A similar code identifies the different aggregates shown in each table.

## **Balance of payments and international investment position**

### **Notes to the tables**

*The order of the tables in the following notes is based on their code numbers.*

#### **TBP60085- Financial account**

Italy's balance of payments data have been compiled since 2013 on the basis of the international standards laid down by the IMF's Balance of Payments and International Investment Position Manual (BPM6) and reconstructed for the earlier periods to guarantee continuity. Starting from January 2009, investment portfolio data are derived, security-by-security, as the difference of the monthly stocks of foreign securities held by residents (assets) and by nonresidents (liabilities), in quantity or nominal value, evaluated at the average price of the security in the reference period. The data sources used to calculate the stocks of foreign securities are the reports of resident custodians (mainly banks), anonymous and security-by-security, on securities held in custody on behalf of investors supplemented by the reports of resident banks and money market funds and the Bank of Italy on their own securities and by a sample survey on assets held abroad by non-bank entities.

#### **TBP60200 - Changes in the TARGET2 balance in relation to the other Balance of payments items**

The cross-border payments in euro of the euro-area national banking sectors and central banks (NCBs) are settled through the common payments system TARGET2 (Trans-European Automated Real-time Gross settlement Express Transfer system). When a bank makes a cross-border payment to another bank, this transaction is debited to the account of the paying bank at its NCB and credited to the account of the receiving bank at its NCB. The NCB of the paying bank therefore records a decrease in the bank's account with it while the NCB of the recipient bank records an increase in the account of the recipient bank. These positions correspond to a liability in the TARGET2 system for the first NCB and an asset for the second. Changes in TARGET2 assets and liabilities may also derive from cross-border transactions by the NCBs themselves, such as purchases and sales of securities. At the end of the business day, assets and liabilities are aggregated and offset at the Eurosystem level. This process gives rise, for each NCB, to a bilateral net position vis-à-vis the ECB in the form of a positive or negative TARGET2 balance. The balance is recorded in the external statistics among other investments in the item 'accounts and deposits' of the central bank, either on the asset side (when the balance is positive) or on the liability side (when the balance is negative). The TARGET2 balance of each country can be seen as a contra item to the commercial and financial transactions between residents and non-residents and its changes over time can, therefore, be described ex-post using the balance of payments accounting identity. The table provides a breakdown of the changes in the TARGET2 balance by showing its main counterparts for Italy:

- A. foreign portfolio investment in Italian public debt securities;
- B. foreign portfolio investment in Italian private sector securities, excluding bank bonds;
- C. foreign portfolio investment in Italian bank bonds;
- D. resident monetary financial institutions' (excluding the central bank) net foreign funding for loans, deposits and other investments (including transactions cleared through the resident central counterparty);
- E. current account balance and capital account balance;
- F. net liquidity inflows due to other items (direct investments from and into the country, residual items in the 'other investments' item, changes in official reserves, financial derivatives, other portfolio liabilities, errors and omissions); and
- G. portfolio investment in foreign financial assets by Italian residents.

By definition, the change in the TARGET2 balance is equal to A + B + C + D + E + F - G: liquidity inflows (outflows) determine an improvement (worsening) of the TARGET2 balance over the reference period.

## **Balance of payments and international investment position**

The sum of items A, B and C corresponds to the total purchases of Italian portfolio securities by non-residents (excluding central bank portfolio liabilities and the equity securities of the public sector, which are included in the residual items 'F' and are typically zero); positive values represent liquidity inflows.

Item D is the difference between the increase in liabilities and that in assets for other investments by resident monetary financial institutions (excluding the central bank); positive values represent liquidity inflows. The liabilities in item D also include repo transactions by the banking sector that are cleared through the resident central counterparty (which in the balance of payments presentation is classified under 'other sectors', as it is not a bank).

Positive current and capital account balances indicate liquidity inflows, as well as a positive value for the residual items F. Purchases of foreign portfolio securities by residents (item G) instead indicate liquidity outflows.

From an accounting point of view, changes in the TARGET2 balance are recorded as an increase/decrease in assets when the balance is positive, and in liabilities when the balance is negative. In the latter case, which is the situation of the TARGET2 balance of the Bank of Italy since July 2011, an improvement in the balance is recorded with a negative sign, i.e. as a reduction in liabilities. Therefore, the sign of the change in the TARGET2 balance obtained from the sum A + B + C + D + E + F - G is the opposite of that in the standard presentation of the balance of payments.

### **TBP60300 - Current account: balances**

The data have been compiled since 2013 on the basis of the international standards laid down by the IMF's Balance of Payments and International Investment Position Manual (BPM6) and reconstructed for the earlier periods to guarantee continuity.

### **TBP60310 - Current account: credits**

The data have been compiled since 2013 on the basis of the international standards laid down by the IMF's Balance of Payments and International Investment Position Manual (BPM6) and reconstructed for the earlier periods to guarantee continuity.

### **TBP60320 - Current account: debits**

The data have been compiled since 2013 on the basis of the international standards laid down by the IMF's Balance of Payments and International Investment Position Manual (BPM6) and reconstructed for the earlier periods to guarantee continuity.

### **TBP60400 - International travel by purpose: credits, debits and balances**

Data are derived from the sample survey on Italy's international tourism, carried out by the Banca d'Italia on a continuous basis since 1996. The survey consists in questioning a sample of inbound and outbound travellers at the borders. Two main activities are carried out each year: around 150,000 face-to-face interviews in order to collect information on the travellers' expenditure and on a set of detailed traveller's characteristics and behaviour, and about 1,500,000 counting operations for disaggregating the number of travellers - drawn by administrative sources - by country of residence.

### **TED60500 - Breakdown of external liabilities other than equity (external debt)**

The data are compiled on the basis of the sixth IMF's Balance of Payments and International Investment Position Manual (BPM6) and therefore are consistent with those related to international investment position. External debt statistics are a subset of the international investment position statistics, as the former do not include financial derivatives, equity capital and reinvested earnings. Partial misalignments between the two sets of statistics may be due to the

## **Balance of payments and international investment position**

differences in the provisional nature of the data. With effect from end-2008 data, portfolio investment stocks are calculated on the basis of an anonymous security-by-security reporting of the stocks held for investors by depositaries.

### **TICOM250 - Price-competitiveness indicators based on producer prices in manufacturing**

The table gives overall price-competitiveness indicators (export and import competitiveness combined) as calculated on the basis of manufacturing producer prices in 61 countries. Starting in December 2018, the set of indicators presented in the table comprises 12 countries, as Brazil, Poland and Turkey are now excluded from the group of countries for which indicators are provided; at the same time, the dissemination of new time series has begun which provide a breakdown of the indicators based on a number of attributes (outlet market; subset of competitors; distinction between import and export competitiveness). The new series are published in [Excel format](#). All the published time series are monthly and begin in January 1992. For the method of calculation see A. Felettigh and C. Giordano, [Rethinking prices and markets underlying price-competitiveness indicators](#), Banca d'Italia, Questioni di Economia e Finanza (Occasional Papers), 447, July 2018. Rounding may cause discrepancies between monthly, quarterly and annual data.

### **TIIP0200 - International investment position: net positions**

The data have been compiled since 2013 on the basis of the international standards laid down by the IMF's Balance of Payments and International Investment Position Manual (BPM6) and reconstructed for the earlier periods to guarantee continuity. Further information is included in the notes to Tables TIIP0300 e TIIP0400.

### **TIIP0300 - International investment position: assets**

The data have been compiled since 2013 on the basis of the international standards laid down by the IMF's Balance of Payments and International Investment Position Manual (BPM6) and reconstructed for the earlier periods to guarantee continuity. With effect from end-2007, Italy's international investment position is compiled on the basis of a statistical data collection and compilation system based on stock data; the series prior to end-2007 have been revised to provide continuity with the new data. With effect from end-2008 data, portfolio investment stocks are calculated on the basis of an anonymous security-by-security reporting of the stocks held for investors by depositaries (as provided for in Guidelines ECB/2004/15 and ECB/2007/3).

### **TIIP0400 - International investment position: liabilities**

The data have been compiled since 2013 on the basis of the international standards laid down by the IMF's Balance of Payments and International Investment Position Manual (BPM6) and reconstructed for the earlier periods to guarantee continuity. With effect from end-2007, Italy's international investment position is compiled on the basis of a statistical data collection and compilation system based on stock data; the series prior to end-2007 have been revised to provide continuity with the new data. With effect from end-2008 data, portfolio investment stocks are calculated on the basis of an anonymous security-by-security reporting of the stocks held for investors by depositaries (as provided for in Guidelines ECB/2004/15 and ECB/2007/3). Starting with the November 2013 issue of the Supplement, the external debtor position in financial derivatives of General government of Italy includes new information on transactions with foreign banks. The information became available following a cooperation agreement with the Ministry of Economy and Finance, under which new estimation methods consistent with national accounts and balance of payments definitions were developed. Since the variation in the liability side is entirely due to valuation adjustments, no corrections were made to balance of payments flows.

'Statistics' series publications are available on the Bank of Italy's site:
