

Appendix

Statistical tables

The world economy

- Table a1 — GDP at constant prices
 " a2 — Industrial production
 " a3 — Consumer prices
 " a4 — External current account
 " a5 — Short-term interest rates
 " a6 — Long-term interest rates and share price indices
 " a7 — Ecu/euro exchange rates and the price of gold
 " a8 — Indicators of competitiveness

The Italian economy

- Table a9 — Sources and uses of income
 " a10 — Industrial production and ISAE business opinion indicators
 " a11 — Labour force, employment and unemployment
 " a12 — National consumer price indices: Italy
 " a13 — Harmonized index of consumer prices: Italy
 " a14 — Harmonized consumer price indices in the euro area
 " a15 — Harmonized index of consumer prices: main euro-area countries
 " a16 — Index of producer prices of manufactures sold in the domestic market: Italy
 " a17 — Index of producer prices of manufactures sold in the domestic market: main euro-area countries
 " a18 — Average unit values in lire of imported and exported manufactures: Italy
 " a19 — Balance of payments: current account and capital account
 " a20 — Balance of payments: financial account

Money, credit and interest rates

- Table a21 — State sector borrowing requirement
 " a22 — Financing of the general government borrowing requirement
 " a23 — General government debt
 " a24 — ECB interest rates
 " a25 — Treasury bill yields and interbank rates
 " a26 — Bank interest rates: funds raised from resident customers in lire/euros
 " a27 — Bank interest rates: loans to resident customers in lire/euros
 " a28 — Banks and money market funds: balance sheet
 " a29 — Banks: deposits and bonds
 " a30 — Banks: loan and securities portfolios
 " a31 — Italian investment funds: securities portfolios and net assets
 " a32 — Italian investment funds: net purchases of securities
 " a33 — Portfolio management services
 " a34 — Italian components of euro-area monetary aggregates: residents of Italy and the rest of the euro area
 " a35 — Financial assets: residents of Italy
 " a36 — Credit: residents of Italy
 " a37 — Supervisory capital and capital adequacy (on a consolidated basis)

SYMBOLS AND CONVENTIONS

In the following tables:

- the phenomenon in question does not occur;
- the phenomenon occurs but its value is not known;
- .. the value is known but is nil or less than half the final digit shown;
- () provisional;
- () estimated.

Notes to the statistical tables are on pp. 47a-52a.

Table a1

GDP at constant prices

	Percentage of world GNP in 1998 (1)	1996	1997	1998	1999	2000	1999 Q4	2000 Q1	2000 Q2	2000 Q3	2000 Q4
--	--	------	------	------	------	------	------------	------------	------------	------------	------------

Source: Based on Istat data.

(1) Indices, 1995=100. - (2) Consumer price index for worker and employee households, excluding tobacco products; 1995=100. - (3) As of January 1999 Istat changes the weights every year on the basis of estimates of households' final consumption in the previous year. The weights shown in the table are those for January 2000. - (4) The calculation of the sub-indices is based on the disaggregation into 209 elementary items. - (5) Includes medicines, for which the reference is to the aggregate calculated by Istat; around one third of this aggregate consists of products in the so-called "C band", the prices of which are not regulated. - (6) Percentage changes published by Istat and calculated on indices rounded to the first decimal place.

(1) From December 1998 the item "Borrowing from central bank" refers exclusively to the accounts of the Bank of Italy (and not to the consolidated accounts of the Bank of Italy and the UIC) since that month saw the completion of the transfer of the reserves held by the UIC to the Bank of Italy in conformity with Legislative Decrees 43/1998 and 319/1998 and the UIC's securities portfolio is included under "Medium and long-term securities excluding central bank". At 31 December 1998 borrowing from UIC is estimated to have amounted to around 2.3 trillion lire.

(1) For banks not belonging to a banking group, the data are obtained from the reports they submit on a solo basis. - (2) Capital shortfalls multiplied by 12.5 and divided by the risk-weighted assets of the banking system.

Notes to the statistical tables

Table a1

Sources: IMF, OECD, Eurostat, Istat and national statistics.

For India, GDP at factor cost (fiscal year: April-March).

Table a2

Sources: IMF, Eurostat, Istat and national statistics.

For Italy, see the notes to Table a10.

For China, industrial value added. For Indonesia and Thailand, manufacturing.

Table a3

Sources: IMF, Eurostat, Istat and national statistics.

For the euro area, Germany, France and Italy, harmonized consumer prices. For the United Kingdom, consumer prices excluding mortgage interest.

Table a4

Sources: IMF, ECB and national statistics.

The annual data for the current account balance may not coincide with the sum of the seasonally adjusted quarterly data.

Table a5

Sources: ECB and national statistics.

Official reference rates. For the United States, federal funds target rate; for Japan, discount rate; for the euro area, rate for main refinancing operations; for the United Kingdom, base rate; for Canada, official bank rate.

Money market rates. For the United States, rate on 3-month CDs; for Japan, 3-month call rate (un-collateralized); for the euro area, 3-month Euribor (until December 1998, based on national statistics); for the United Kingdom, 3-month interbank rate; for Canada, rate on 3-month prime corporate paper.

Table a6

Source: National statistics.

Bond yields (secondary market, gross). For the United States, 10-year Treasury notes and bonds; for Germany, 9-10 year public sector bonds; for Japan, France, the United Kingdom and Canada, 10-year public sector bonds; for Italy, yield on 10-year benchmark BTPs listed on the screen-based market.

Share indices (1995=100). For the United States, Standard and Poor's composite index; for Japan, Topix; for Germany, FAZ Aktien; for France, CAC 40; for Italy, MIB; for the United Kingdom, FTSE All-Share; for Canada, composite index of the Toronto stock exchange (closing prices).

Table a7

Source: IMF for the gold price.

Period averages except for gold prices, which are end-of-period values.

Table a8

Sources: Based on IMF and OECD data and national statistics.

The table shows real effective exchange rates calculated on the basis of the producer prices of manufactures of 25 countries. For the methodology, see the article "Nuovi indicatori di tasso di cambio effettivo nominale e reale", in the Bank's *Bollettino Economico*, no. 30, February 1998.

Table a9

Source: Istat.

Based on the European system of national accounts ESA95. The item "Other domestic uses" includes consumption of general government and non-profit institutions serving households, changes in inventories and valuables, and statistical discrepancies.

Table a10

Sources: Based on Istat and ISAE data.

The indices of industrial production are adjusted for variations in the number of working days. The seasonal

adjustment of the general index of production and that of the indices of production by economic use are carried out separately using the TRAMO-SEATS procedure; the aggregate index may therefore differ from the weighted mean of the disaggregated indices. For the period up to January 1995, the seasonal adjustment procedure is applied to series obtained by shifting directly from indices with base 1990=100 to indices with base 1995=100. Raw data are shown for the level of foreign orders and for stocks of finished goods.

Table a12

Source: Istat.

As of February 1992, the consumer price index for worker and employee households excludes tobacco products (Law 81/1992). As of January 1999, both the consumer price index for the entire resident population and that for worker and employee households are chain indices with December of the previous year as the calculation base. The reference year for the indices remains 1995 (1995=100). The item "Goods and services with regulated prices" includes the unregulated price of cylinder gas among energy prices since the disaggregation into 209 elementary items does not permit its exclusion.

Table a17

Source: Istat.

The sub-indices reported in the table are constructed on the basis of the data published by Eurostat to obtain aggregates that are comparable across countries and analogous to those used for the analysis of consumer price inflation (see the box "Nuovi indicatori dei prezzi alla produzione nell'area dell'euro", in the Bank's *Bollettino Economico*, no. 35, October 2000).

Table a21

The table shows the state sector borrowing requirement on the basis of the definition of the sector that comprises the budget and Treasury operations, the Deposits and Loans Fund, the Southern Italy Development Agency (suppressed in April 1993), the National Road Agency (ANAS) and the former State Forests.

The budget deficit excludes accounting items that are offset under Treasury operations, loan disbursements and repayments and settlements of debts involving state sector bodies or which merely result in accounting transactions between the budget and Treasury operations; on the other hand, it includes VAT refunds channeled through

taxpayers' tax accounts. As of May 1998, following the introduction of the single tax payment form (Legislative Decree 241/1997) and the single mandate procedure (Ministerial Decree 183/1998), the main taxes are paid without distinction into a single account at the Treasury and subsequently allocated among the different budget items. The receipts shown in this table are based on data collected at the time they are booked in the budget accounts; accordingly, they do not include any balances at the Treasury deriving from delays in the booking of receipts. Furthermore, owing to the new method of paying taxes the monthly figures of the "Receipts" and "Payments" series are affected by the leads and lags with which tax refunds and collection charges are entered in the accounts. The item "Treasury operations" includes transactions vis-à-vis the Treasury Ministry (net of accounting items vis-à-vis the budget) and minor items vis-à-vis the Bank of Italy and the UIC. The flows shown in the subitem "Collection accounts" show the changes in receipts pending the allocation of central government taxes, the share of Irap due to the regions and the social security contributions paid using the single mandate procedure but due to INPS. A negative flow indicates that the amounts booked in the month exceeded the revenue received and vice versa. The interest on postal savings certificates is determined on a cash basis. The additional borrowing of "ANAS, Forests and other bodies" includes the net funds they raised directly in the market. The items "Settlements of past debts" and "Privatization receipts" permit the reconciliation of the effective funding requirement and the definition of the borrowing requirement currently used to determine the objectives for fiscal policy. The figures for the last year are provisional.

Table a22

The table shows the financing of the general government borrowing requirement. "Foreign loans" comprise only those raised abroad directly; they do not include loans contracted indirectly via banks, which are included under "Lending by banks", or BOTs and other government securities acquired by non-residents, which are included in the respective categories of domestic debt. The item also includes CTEs stamped as being for circulation abroad. The item "Central bank financing" includes the Treasury's overdraft with the Bank of Italy, a suspense account and the Treasury payments account (see Law 483/1993) and the sinking fund for the redemption of government securities (see Laws 432/1993 and 110/1997). Postal savings certificates are included at their face value at issue. "Medium and long-term securities", "Foreign loans" and "Other" include the corresponding financial instruments related to operations

entered into by the State Railways with the cost borne by the government. The figures for the last year are provisional.

Some of the criteria for the classification of bank loans have been revised in this issue of the Bulletin. The revision, which has been carried out for the entire series of bank loans, has resulted in the attribution to general government of some loans that were previously classified as being to persons outside that sector.

Table a23

The table shows general government debt and its composition (the figure for the state sector is shown as a memorandum item). The debt (end-of-period data) is stated at face value and that denominated in foreign currency is translated at year-end exchange rates. The items "Medium and long-term securities excluding central bank", "BOTs and BTEs excluding central bank" and "Borrowing from central bank" include only securities acquired outright. CTEs that are not stamped as being for circulation abroad and BTEs are included in domestic debt. Medium and long-term securities include bonds issued by Crediop on behalf of the Treasury and the former autonomous government agencies; the amount of these bonds is deducted from the lending of banks to these bodies. Medium and long-term securities also include the BTPs issued in connection with the closure of the Treasury's current account with the Bank of Italy. Medium and long-term securities and Treasury bills do not include those held by social security institutions and other bodies included in general government. PO deposits comprise current accounts, net of "service" accounts and Treasury payments to municipalities and provinces that are held with the PO. Postal savings certificates are included at their face value at issue. The stocks of lending by banks are based on automated prudential returns. "Debt issued abroad" includes only loans raised directly abroad and CTEs that are stamped as being for circulation abroad. Foreign loans are translated into lire on the basis of the currency in which the debt was originally contracted, regardless of subsequent swap transactions. In the same way as for the state sector borrowing requirement, the debt figures for "Medium and long-term securities", "Lending by banks" and "Debt issued abroad" include the corresponding financial instruments related to operations entered into by the State Railways with the cost borne by the government. From December 1998 the item "Borrowing from central bank" refers exclusively to the accounts of the Bank of Italy (and not to the consolidated accounts of the Bank of Italy and the UIC) since that

month saw the completion of the transfer of the reserves held by the UIC to the Bank of Italy in conformity with Legislative Decrees 43/1998 and 319/1998. The UIC's securities portfolio is included under "Medium and long-term securities excluding central bank". The figures for the last year are provisional.

Some of the criteria for the classification of bank loans have been revised in this issue of the Bulletin. The revision, which has been carried out for the entire series of bank loans, has resulted in the attribution to general government of some loans that were previously classified as being to persons outside that sector.

Table a24

The interest rates on the "deposit facility" and the "marginal lending facility" are set by the Governing Council of the ECB and represent respectively the lower limit and the upper limit of the corridor of official interest rates.

On 8 June the Governing Council of the ECB announced that, starting from the operation to be settled on 28 June 2000, the main refinancing operations of the Eurosystem would be conducted as variable rate tenders, applying the multiple rate auction procedures. It also decided to set a minimum bid rate for these operations.

Under Legislative Decree 213/1998, as of 1 January 1999, for a period of not more than 5 years, the Bank of Italy periodically determines "the reference rate for instruments linked to the former discount rate", which replaces the latter. The reference rate is modified by an order issued by the Governor taking account of the changes involving the monetary instrument used by the ECB that the Bank of Italy considers to be the closest equivalent to the official discount rate.

Table a25

The average Treasury Bill rate is the average, weighted on the basis of the quantities allotted, of the allotment rates of the auctions of mini-BOTs and three, six and twelve-month BOTs. As of January 1999, the 360-day year is used instead of the 365-day year.

The interbank rates (overnight and at one, three six and twelve months) are observed daily on the Interbank Deposit Market (MID) are weighted average bid-ask rates.

Tables a26 and a27

The annual data refer to the month of December.

The figures are based on the 10-day survey introduced in January 1995. The sample consists of the banks participating in the survey at each reference date.

The indication "lire/euros" means that as of January 1999 the figures include amounts in euros and other euro-area currencies.

Table a28

This table refers to the statistical returns submitted to the European Central Bank by Italian banks and money market funds. Since the start of the third phase of Economic and Monetary Union, intermediaries subject to statistical reporting requirements in the euro area have been known as Monetary Financial Institutions (MFIs). The category comprises central banks, credit institutions and all other resident financial institutions whose business consists in receiving deposits and/or close substitutes for deposits from institutions other than MFIs and in granting credit and/or making investments in securities for their own account. For further details, see the Methodological Appendix and the notes to the tables of the "Monetary Financial Institutions: Banks and Money Market Funds" Supplement to the Statistical Bulletin.

For the period from December 1995 to May 1998, the time series are estimated drawing on supervisory returns; as of June 1998 data are reported by banks in accordance with the new harmonized definitions adopted by the ESCB for the euro area as a whole. "Loans" include repo assets and bad debts. "Deposits" include current account deposits, deposits with agreed maturities and redeemable at notice, and repo liabilities. "Debt securities" include subordinated liabilities. The item "Capital and reserves" is made up of share capital, reserves, provisions for general banking risks and the balance of prior-year profits and losses.

Table a29

The data refer to all the banks resident in Italy.

The annual data refer to the month of December.

Deposits refer to those of other general government and other sectors. Current account deposits include banker's drafts but not current account time deposits. Deposits with agreed maturity include certificates of deposit, current account time deposits and savings account time deposits. Deposits redeemable at notice consist of ordinary savings account deposits.

Bonds comprise all the debt instruments issued by banks, including subordinated liabilities. As of December 2000, reverse convertibles are included in the series with maturities up to two years.

Table a30

The data refer to all the banks resident in Italy.

The annual data refer to the month of December.

"Loans" do not include those granted by branches abroad.

"Other" securities refer to banks' holdings of lira and foreign currency bonds issued by residents.

The indication "lire/euros" means that as of January 1999 the figures include amounts in euros and other euro-area currencies.

Table a31

"Other financial assets" include CDs, banker's acceptances and commercial paper. The difference between "Net assets" and "Total portfolio" consists of other net assets (mainly current accounts and repos). SICAVs are included. Funds of funds are not included. Rounding may cause discrepancies in totals.

Table a32

"Other financial assets" include CDs, banker's acceptances and commercial paper. Funds of funds are not included. Rounding may cause discrepancies in totals.

Table a33

The amounts shown for "Banks" refer to the portfolio management services they provide directly. Owing to changes introduced in July 2000 in the statistical reports submitted by investment firms (SIMs), there is a break in the data concerning these intermediaries in the third quarter of 2000. "Other financial assets" include CDs, banker's acceptances and commercial paper. "Net inflow" is calculated as the sum of monthly flows.

Table a34

All the items refer to the liabilities included in M3 of Italian MFIs and the Post Office towards the "money holding sector" of the entire euro area. This sector, adopted by the ESCB in the harmonization of national statistics, comprises all the residents of the euro area apart from MFIs and central governments. Accordingly, it includes "other general government" (local authorities and social security funds) and "other residents" (non-money-market investment funds, other financial institutions, non-financial corporations, insurance corporations, households, and non-profit institutions serving households).

“Currency in circulation” comprises Bank of Italy banknotes and Treasury coins. “Current account deposits” comprise current accounts held with resident MFIs and the Post Office; bank CDs redeemable within 24 months are included under “Deposits with agreed maturities up to 2 years”; freely available PO deposit book accounts and ordinary PO savings certificates are included under “Deposits redeemable at notice up to 3 months”. Money market paper includes atypical securities and banker’s acceptances liabilities. Money market funds are defined as collective investment funds whose shares/units are close substitutes for deposits in terms of liquidity and/or which invest in tradable debt securities with a residual maturity of up to one year.

The contributions to the euro-area monetary aggregates are obtained by summing the relevant items and deducting Italian MFIs’ holdings of: banknotes and coin in lire and the other euro-area currencies, for M1, and bonds issued by MFIs resident in the rest of the euro area, for M3. For further details on the methods used to compile these statistics, see “Note metodologiche e informazioni statistiche - Aggregati monetari e creditizi dell’area dell’euro: le componenti italiane” in the series Supplements to the *Statistical Bulletin*, Volume X, no. 33, 12 June 2000.

Table a35

All the items refer to the financial assets of the Italian “money holding sector” (see the note to Table a34); the share of each item held by non-money-market funds is shown separately.

“Total monetary assets” comprise currency in circulation, current account deposits, deposits with agreed maturity up to 2 years, deposits redeemable at notice up to 3 months, repos, money market fund shares/units and money market paper, and debt securities up to 2 years.

“Other deposits” comprise deposits with agreed maturity over 2 years, deposits redeemable at notice over 3 months and forward PO savings certificates, which are measured on the basis of the price at issue.

“Government securities” comprise CCTs, BTPs, CTZs, CTEs and other medium and long-term government securities at face value. The item refers to securities acquired outright; it excludes the securities acquired by the money holding sector under repos but includes those sold.

“Other financial assets” include enterprises’ surety deposits; “Other financial assets held by non-money-market funds” include shares issued by residents in Italy.

Table a36

The items refer to “other residents” and “general government”, which have replaced respectively the “non-state sector” and the “state sector” in the statistics compiled until December 1998 (see “Note metodologiche e informazioni statistiche - Aggregati monetari e creditizi dell’area dell’euro: le componenti italiane” in the series Supplements to the *Statistical Bulletin*, Volume X, no. 33, 12 June 2000).

“Bonds placed domestically” are those issued by “other residents” after deducting the amounts held by residents of the rest of the euro area and the rest of the world.

“External finance” comprises the loans disbursed to “other residents” and the debt securities thereof bought at issue by residents of the rest of the euro area and the rest of the world.

“General government debt” is stated at face value and is calculated, in accordance with the EU definition, gross of the Treasury’s claims on the Bank of Italy (balances on the Treasury payments account, the sinking fund for the redemption of government securities and other smaller accounts) since December 1998, and of claims on the Bank of Italy and the UIC for the preceding period.

Table a37

Source: Supervisory reports.

The data refer to supervisory capital calculated on a consolidated basis and the corresponding solvency ratio.

Supervisory capital is determined as the algebraic sum of a series of positive and negative items, whose inclusion in core or supplementary capital is admitted, with or without restrictions, according to the item.

Paid-in capital, reserves, provisions for general banking risks and innovative capital instruments – net of any own shares or capital parts held, intangible assets and loss for the year – are the elements of core capital, which is included in the calculation of supervisory capital without restriction. Revaluation reserves, provisions for losses, hybrid capital instruments and subordinated liabilities – net of any revaluation losses on securities held as financial fixed assets and other negative items – constitute supplementary capital, which is included in the calculation of supervisory capital up to the amount of core capital.

The regulations governing the solvency ratio require banking groups and banks not belonging to a group to satisfy a minimum capital requirement of 8 per cent, defined as the ratio of their supervisory capital to the total of their on-and off-balance-sheet assets, weighted according to their potential riskiness.

The calculation of the excess amounts and shortfalls of supervisory capital ("Excess capital" and "Capital shortfalls") is based on the assumption of a minimum capital requirement of 8 per cent for all banks, including those belonging to banking groups, for which the supervisory regulations envisage a requirement of 7 per

cent provided that the group as a whole satisfies the 8 per cent requirement.

The solvency ratio figures take account of the prudential requirements for market risks.

For India, GDP at factor cost (fiscal year: April-March).
