

Appendix

Statistical tables

The world economy

- Table a1 — GDP at constant prices
 " a2 — Industrial production
 " a3 — Consumer prices
 " a4 — External current account
 " a5 — Short-term interest rates
 " a6 — Long-term interest rates and share price indices
 " a7 — Ecu/euro exchange rates and the price of gold
 " a8 — Indicators of competitiveness

The Italian economy

- Table a9 — Sources and uses of income
 " a10 — Industrial production and ISAE business opinion indicators
 " a11 — Labour force, employment and unemployment
 " a12 — National consumer price indices: Italy
 " a13 — Harmonized index of consumer prices: Italy
 " a14 — Harmonized consumer price indices in the euro area
 " a15 — Harmonized index of consumer prices: main euro-area countries
 " a16 — Index of producer prices of manufactures sold in the domestic market: Italy
 " a17 — Index of producer prices of manufactures sold in the domestic market: main euro-area countries
 " a18 — Average unit values in lire of imported and exported manufactures: Italy
 " a19 — Balance of payments: current account and capital account
 " a20 — Balance of payments: financial account

Money, credit and interest rates

- Table a21 — Formation of general government borrowing requirement
 " a22 — Financing of the general government borrowing requirement
 " a23 — General government debt
 " a24 — ECB interest rates
 " a25 — Treasury bill yields and interbank rates
 " a26 — Bank interest rates: funds raised from resident customers in lire/euros
 " a27 — Bank interest rates: loans to resident customers in lire/euros
 " a28 — Banks and money market funds: balance sheet
 " a29 — Banks: deposits and bonds
 " a30 — Banks: loan and securities portfolios
 " a31 — Italian investment funds: securities portfolios and net assets
 " a32 — Italian investment funds: net purchases of securities
 " a33 — Portfolio management services
 " a34 — Italian components of euro-area monetary aggregates: residents of Italy and the rest of the euro area
 " a35 — Financial assets: residents of Italy
 " a36 — Credit: residents of Italy
 " a37 — Supervisory capital and capital adequacy (on a consolidated basis)

SYMBOLS AND CONVENTIONS

In the following tables:

- the phenomenon in question does not occur;
- the phenomenon occurs but its value is not known;
- . . the value is known but is nil or less than half the final digit shown;
- () provisional;
- () estimated.

Notes to the statistical tables are on pp. 47a-53a.

Table a1**GDP at constant prices**

| | Percentage of world GNP in 1999 (1) | 1997 | 1998 | 1999 | 2000 | 2001 | 2000 Q4 | 2001 Q1 | 2001 Q2 | 2001 Q3 | 2001 Q4 |

Source: Based on Istat data.

(1) Indices, 1995=100. – (2) Consumer price index for worker and employee households, excluding tobacco products; 1995=100. – (3) As of January 1999 Istat changes the weights every year on the basis of estimates of households' final consumption in the previous year. The weights shown in the table are those for January 2002. – (4) The calculation of the sub-indices is based on the disaggregation into 207 elementary items. – (5) Includes medicines, for which the reference is to the aggregate calculated by Istat; around one third of this aggregate consists of products in the so-called "C" band, the prices of which are not regulated. – (6) Percentage changes published by Istat and calculated on indices rounded to the first decimal place.

(1) From December 1998 the item "Borrowing from central bank" refers exclusively to the accounts of the Bank of Italy (and not to the consolidated accounts of the Bank of Italy and the UIC) since that month saw the completion of the transfer of the reserves held by the UIC to the Bank of Italy in conformity with Legislative Decrees 43/1998 and 319/1998 and the UIC's securities portfolio is included under "Medium and long-term securities excluding central bank". In December 1998 borrowing from UIC is estimated to have amounted to around 2.3 trillion lire and claims on UIC to 0.7 trillion.

(1) For banks not belonging to a banking group, the data are obtained from the reports they submit on a solo basis. The branches of foreign banks are not included. — (2) Capital shortfalls multiplied by 12.5 and divided by the risk-weighted assets of the banking system.

Notes to the statistical tables

Table a1

Sources: Eurostat, Istat and national statistics.
For India, GDP at factor cost (fiscal year: April-March).

9-10 year public sector bonds; for Japan, France, the United Kingdom and Canada, 10-year public sector bonds; for Italy, yield on 10-year benchmark BTPs listed on the MTS market.

Table a2

Sources: IMF, Eurostat, Istat and national statistics.
For Italy, see the notes to Table a10.
For China, industrial value added. For Indonesia and Thailand, manufacturing.

Share indices (1995=100). For the United States, Standard and Poor's composite index; for Japan, Topix; for Germany, FAZ Aktien; for France, CAC 40; for Italy, MIB; for the United Kingdom, FTSE All-Share; for Canada, composite index of the Toronto stock exchange (closing prices).

Table a3

Sources: IMF, Eurostat, Istat and national statistics.
For the euro area, Germany, France and Italy, harmonized consumer prices. For the United Kingdom, consumer prices excluding mortgage interest.

Table a7

Source: IMF for the gold price.
Period averages except for gold prices, which are end-of-period values.

Table a4

Sources: IMF, OECD, ECB and national statistics.
The annual data for the current account balance may not coincide with the sum of the seasonally adjusted quarterly data.

Sources: Based on IMF, OECD and Eurostat data and national statistics.

The table shows real effective exchange rates calculated on the basis of the producer prices of manufactures of 25 countries. For the methodology, see the article "Nuovi indicatori di tasso di cambio effettivo nominale e reale", in the Bank's *Bollettino Economico*, No. 30, February 1998.

Table a5

Sources: ECB and national statistics.
Official reference rates. For the United States, federal funds target rate; for Japan, discount rate; for the euro area, rate for main refinancing operations; for the United Kingdom, repo rate; for Canada, official bank rate.
Money market rates. For the United States, rate on 3-month CDs; for Japan, 3-month call rate (un-collateralized); for the euro area, 3-month Euribor (until December 1998, based on national statistics); for the United Kingdom, 3-month interbank rate; for Canada, rate on 3-month prime corporate paper.

Table a9

Source: Istat.
Based on the European system of national accounts ESA95. The item "Other domestic uses" includes consumption of general government and non-profit institutions serving households, changes in inventories and valuables, and statistical discrepancies.

Table a6

Source: National statistics.
Bond yields (secondary market, gross). For the United States, 10-year Treasury notes and bonds; for Germany,

Table a10

Sources: Based on Istat and ISAE data.
The indices of industrial production are adjusted for variations in the number of working days. The seasonal adjustment of the general index of production and that of the indices of production by economic use are carried out separately using the TRAMO-SEATS procedure; the

aggregate index may therefore differ from the weighted mean of the disaggregated indices. For the period up to January 1995, the seasonal adjustment procedure is applied to series obtained by shifting directly from indices with base 1990=100 to indices with base 1995=100. Raw data are shown for stocks of finished goods.

Table a12

Source: Istat.

For some years Istat has published three consumer price indices: the index for the entire resident population (NIC), the index for worker and employee households (FOI) and the harmonized index (HICP). The three indicators are constructed on the basis of the same data set. For each level of disaggregation, they have been calculated as chain indices since January 1999. The "calculation base" (the period to which the prices used as the denominator for "simple" indices refer) is December of the previous year; the "reference base of the weights" (the period with reference to which the weights are calculated) is given by the structure of households' average consumption in the previous year; and the "reference base of the indices" (the period for which they are set equal to 100) is currently 1995 for the NIC and FOI indices and 1996 for the HICP. The NIC and FOI indices differ from the HICP mainly with regard to how prices are defined: where sales prices differ from those actually paid by consumers (as in the case of medicinal drugs, for which the National Health Service pays a contribution), the NIC and FOI indices consider the full sales price whereas the HICP considers the price actually paid. The differences between the baskets of the NIC index and the HICP – the indices most used at present in the analysis of inflation – are very small. The FOI index is now used almost exclusively for legislative purposes (revision of rents and contractual amounts, etc.) in the version that includes changes in indirect taxes and excludes tobacco products.

For the NIC index, the identification of items with regulated prices refers to the situation in April 2001. The composition of "Goods and services with regulated prices" is as follows:

Energy products: electricity and gas;

Non-energy products: drinking water, medicinal drugs, tobacco products, postal services, telephone services, railway transport, maritime transport, urban transport, coach services, motorway tolls, taxis, radio and TV licences, lotteries and totalizers, medical services, dental services, certificates and stamps, secondary education, university education, rubbish collection services, religious services.

Lastly, the composition of the sub-index "Food products - not processed" is as follows: fresh meat, fresh fish, fresh fruit and vegetables, milk and eggs.

Tables a13, a14 and a15

Source: Eurostat.

The harmonized indices of consumer prices for the countries of the European Union are published by Eurostat. They are available from January 1995 onwards and are produced by the national statistical authorities using harmonized methods. Consequently, they are the most suitable for comparing consumer price inflation in the different countries. The structure and breakdown of these indicators is basically the same as that of national consumer price indices; consequently, in most countries, including Italy, the differences between the two sets of indicators are minimal.

Table a17

Source: Eurostat.

The sub-indices reported in the table are published by Eurostat, except for those excluding food products. The latter are estimated using the index of the prices of food products published by Eurostat on the basis of the sectoral classification of economic activity. Consequently, for the sub-index of "Consumer goods excluding food products", it has to be assumed that such products are mainly for final consumption.

There are some differences between the statistics published by Eurostat and those published by the national statistical authorities. In the first place Eurostat includes all transport equipment among investment goods, whereas the national statistical authorities do not. In the second place, in allocating goods to the various economic uses, Eurostat applies the "prevalent use" criterion, whereas some countries, including Italy, apply the "effective use" criterion (e.g. food products are prevalently for final consumption but in part for intermediate consumption).

Table a18

Source: Istat.

Foreign trade indicators provide summary information on the transactions of businesses of a given country, geographical area or geo-economic region with businesses of foreign countries or areas. National statistical authorities produce three types of foreign trade indicators referred to: values, average unit values and quantities. In the same way as for producer prices, these statistics are not fully harmonized within Europe, and cross-country

comparisons may not be reliable. Eurostat computes foreign trade indicators on the basis of raw data collected by the EU countries and they should be more comparable, but they are generally different from those of the national statistical authorities. In order to produce series that maintain a satisfactory level of representativeness over time, Eurostat uses chained indices, taking the year preceding the reference year as the base year; Istat uses the same method. In accordance with international agreements, imports are stated "cif" and exports "fob".

The indices of average unit values are obtained for successive stages of aggregation of elementary indicators referring to individual categories of goods and geographical areas. The starting point for the computation of the elementary indicators consists in the average unit values of the specific items, calculated as the ratio of the value of the goods exported/imported in the current month and the related quantity. For each sub-item the elementary index is thus obtained by calculating the ratio of the average unit value of the current month to the average of the average unit values of the preceding year. The indices of the average unit values for higher levels of aggregation are Fisher indices, obtained as the geometric mean of the corresponding Laspeyres and Paasche indices. In calculating the Paasche index, the weighting of the elementary items is variable, i.e. is based on the values of the goods of the current month; by contrast, the aggregate Laspeyres index uses a fixed weighting on the basis of the values of the goods for the whole year. The aggregation of the elementary indices for each sub-item in indices with a higher level of aggregation is carried out using various classifications: trade type (SITC, 3rd revision); economic sector (NACE, 1st revision, ATECO91); economic purpose (BEC); and groups of countries, geographical areas or geo-economic regions.

Table a21

The table shows the formation of the general government borrowing requirement. The state sector borrowing requirement net of debt settlements and extraordinary revenue consisting mainly of privatization receipts is shown as a memorandum item. The data on state sector debt settlements and extraordinary revenue are used to provide an estimate of the general government net borrowing requirement.

The formation of the central government borrowing requirement includes transactions with other general government bodies; accordingly, the borrowing requirement of local government and social security institutions after consolidation refers exclusively to their

financing needs over and above those covered by central government transfers.

The budget deficit excludes accounting items that are offset under Treasury operations, loan disbursements and repayments and settlements of debts involving state sector bodies or which merely result in accounting transactions between the budget and Treasury operations; on the other hand, it includes VAT refunds channeled through taxpayers' tax accounts.

The tax receipts of the State budget shown in this table do not correspond to the amounts actually paid. In fact the monthly flows are observed at the time they are included in the budget accounts, which, as of May 1998, does not coincide with the time they are paid. From that date, following the introduction of the single tax payment form (Legislative Decree 241/1997) and the single mandate procedure (Ministerial Decree 183/1998), the main taxes are paid without distinction into a "Collection account" at the Treasury, together with Irap and social security contributions, and subsequently allocated among the different budget items. Furthermore, owing to the new method of paying taxes the monthly figures of the "Receipts" and "Payments" series are affected by the leads and lags with which tax refunds and collection charges are entered in the accounts. The flows shown in the sub-item "Collection accounts" show the changes in receipts pending the allocation of central government taxes, Irap due to the regions and social security contributions paid using the single mandate procedure but due to INPS. A negative flow indicates that the amounts booked in the month exceeded the revenue received.

The figures for the last year are provisional.

Table a22

The table shows details of the financing of the general government borrowing requirement. The sub-item "Lending by banks - Non-resident banks" does not include loans raised abroad indirectly via resident banks. The sub-item "change in central bank current accounts" includes the Treasury payments account (Law 483/1993) and the sinking fund for the redemption of government securities (Laws 432/1993 and 110/1997). "Medium and long-term securities" and "Lending by banks" include the corresponding financial instruments related to operations entered into by the State Railways with the cost borne by the government.

The figures for the last year are provisional.

Table a23

The table shows general government debt and its composition (the figure for central government is shown

as a memorandum item). The debt (end-of-period data) is stated at face value and that denominated in foreign currency is translated at year-end exchange rates, with account taken of any swap operations. The items "Medium and long-term securities excluding central bank", "Short-term securities excluding central bank" and "Borrowing from central bank" include only securities acquired outright. Securities include those issued abroad and bonds issued by Crediop on behalf of the Treasury and the former autonomous government agencies; the amount of these bonds is deducted from the lending of banks to these bodies. Medium and long-term securities also include the BTPs issued in connection with the closure of the Treasury's current account with the Bank of Italy. Medium and long-term securities and Treasury bills do not include those held by social security institutions and other bodies included in general government. Until December 1998 postal deposits comprised current accounts, net of "service" accounts and Treasury payments to municipalities and provinces that are held with the post office. Postal savings certificates are included at their face value at issue. The stocks of lending by resident banks are based on automated prudential returns; those of lending by non-resident banks are provided directly by the borrowers. In the same way as for the borrowing requirement, the figures for "Medium and long-term securities" and "Lending by banks" include the corresponding financial instruments related to operations entered into by the State Railways with the cost borne by the government. December 1998 saw the completion of the transfer of the reserves held by the UIC to the Bank of Italy in conformity with Legislative Decrees 43/1998 and 319/1998. The UIC's securities portfolio is consequently included under "Medium and long-term securities excluding central bank".

The figures for the last year are provisional.

Table a24

The interest rates on the "Deposit facility" and the "Marginal lending facility" are set by the Governing Council of the ECB and represent respectively the lower limit and the upper limit of the corridor of official interest rates.

On 8 June the Governing Council of the ECB announced that, starting from the operation to be settled on 28 June 2000, the main refinancing operations of the Eurosystem would be conducted as variable rate tenders. For these operations the Governing Council sets a minimum bid rate, which plays the role of indicator of the stance of monetary policy previously played by the fixed rate.

Under Legislative Decree 213/1998, as of 1 January 1999, for a period of not more than 5 years, the Bank of Italy

periodically determines the "official reference rate for instruments linked to the former official discount rate", which replaces the latter. The reference rate is modified by an order issued by the Governor taking account of the changes involving the monetary instrument used by the ECB that the Bank of Italy considers to be the closest equivalent to the official discount rate.

Table a25

The average Treasury bill rate is the average, weighted on the basis of the quantities allotted, of the compound allotment rates of the auctions of three, six and twelve-month BOTs and of those with other maturities. As of January 1999, the 360-day year is used instead of the 365-day year.

The interbank rates (overnight and at one, three, six and twelve months) are observed daily on the Interbank Deposit Market (MID); they are weighted average bid-ask rates.

Tables a26 and a27

The annual data refer to the month of December.

The figures are based on the 10-day survey introduced in January 1995. The sample consists of the banks participating in the survey at each reference date.

The indication "lire/euros" means that as of January 1999 the figures include amounts in euros and the euro-area currencies.

Table a28

This table refers to the statistical returns submitted to the European Central Bank by Italian banks and money market funds. Since the start of the third stage of Economic and Monetary Union, intermediaries subject to statistical reporting requirements in the euro area have been known as Monetary Financial Institutions (MFIs). The category comprises central banks, credit institutions and all other resident financial institutions whose business consists in receiving deposits and/or close substitutes for deposits from institutions other than MFIs and in granting credit and/or making investments in securities for their own account. For further details, see the Methodological Appendix and the notes to the tables of the "Monetary Financial Institutions: Banks and Money Market Funds" Supplement to the Statistical Bulletin.

For the period from December 1995 to May 1998, the time series are estimated drawing on supervisory returns; as of June 1998 data are reported by banks in accordance with the new harmonized definitions adopted by the ESCB for the euro area as a whole. "Loans" include repo assets

and bad debts. "Deposits" include overnight deposits, deposits with agreed maturities and redeemable at notice, and repo liabilities. "Debt securities" include subordinated liabilities. The item "Capital and reserves" is made up of share capital, reserves, provisions for general banking risks and the balance of prior-year profits and losses.

Table a29

The data refer to all the banks resident in Italy.

The annual data refer to the month of December.

Deposits refer to those of other general government and other sectors. Current account deposits include banker's drafts but not current account time deposits. Deposits with agreed maturity include certificates of deposit, current account time deposits and savings account time deposits. Deposits redeemable at notice consist of ordinary savings account deposits.

Bonds comprise all the debt instruments issued by banks, including subordinated liabilities. As of December 2000, reverse convertibles are included in the series with maturities up to two years.

Table a30

The data refer to all the banks resident in Italy.

The annual data refer to the month of December.

"Loans" do not include those granted by branches abroad.

"Other" securities refer to banks' holdings of lira and foreign currency bonds issued by residents.

The indication "lire/euros" means that as of January 1999 the figures include amounts in euros and the euro-area currencies.

Table a31

"Other financial assets" include CDs, banker's acceptances and commercial paper. The difference between "Net assets" and "Total portfolio" consists of other net assets (mainly current accounts and repos). SICAVs are included. The data refer only to harmonized funds. Rounding may cause discrepancies in totals.

Table a32

"Other financial assets" include CDs, banker's acceptances and commercial paper. The data refer only to harmonized funds. Rounding may cause discrepancies in totals.

Table a33

The amounts shown for each category of intermediary refer to the portfolio management services they provide directly. "Other financial assets" include CDs, banker's acceptances and commercial paper. "Net inflow" is calculated as the sum of monthly flows.

Table a34

All the items refer to the liabilities included in M3 of Italian MFIs and Poste Italiane S.p.A. towards the "money holding sector" of the entire euro area. This sector, adopted by the ESCB in the harmonization of national statistics, comprises all the residents of the euro area apart from MFIs and central governments. Accordingly, it includes "other general government" (local authorities and social security funds) and "other residents" (non-money-market investment funds, other financial institutions, non-financial corporations, insurance corporations, households, and non-profit institutions serving households).

As of January 2002, the Italian monetary aggregates include notes and coins in circulation denominated in euros.

Owing to the cross-border migration of euro notes and coins, the currency in circulation in the various countries no longer corresponds to the quantities they have issued. In order to measure the currency in circulation for inclusion here, the Bank of Italy is conventionally allocated a share of the total issue of euro notes on the basis of its share of the ECB's capital (the so-called Capital Share Mechanism). Each country's share of the ECB's capital is equal to the arithmetic mean of its shares of the euro-area's total population and total income.

Until December 2001 the item "Currency in circulation" comprises Bank of Italy banknotes and Treasury coins. As of January 2002, the Italian component of the currency in circulation in the euro area includes the remaining quantity of lira currency in circulation and the euro currency conventionally allocated to the Bank of Italy by applying the Capital Share Mechanism. This differs from the quantity obtained by applying the harmonized accounting methods for the note circulation in the euro area since it is calculated by applying the Capital Share Mechanism to 100% of the total value of the euro notes in circulation, thus including the 8% share distributed by the NCBs but allocated for accounting purposes to the ECB.

"Current account deposits" comprise current accounts held with resident MFIs and the Post Office; bank CDs redeemable within 24 months are included under "Deposits with agreed maturities up to 2 years"; freely available postal deposit book accounts and ordinary postal savings

certificates are included under "Deposits redeemable at notice up to 3 months". Resident banks do not issue liabilities classifiable as money market paper. Money market funds are defined as collective investment funds whose shares/units are close substitutes for deposits in terms of liquidity and/or which invest in tradable debt securities with a residual maturity of up to one year.

The contributions to the euro-area monetary aggregates are obtained by summing the relevant items and deducting Italian MFIs' holdings of: banknotes and coin in lire and the other euro-area currencies, for M1, and bonds issued by MFIs resident in the rest of the euro area, for M3. For further details on the methods used to compile these statistics, see "Note metodologiche e informazioni statistiche – Aggregati monetari e creditizi dell'area dell'euro: le componenti italiane" in the series Supplements to the *Statistical Bulletin*, Volume X, No. 33, 12 June 2000.

Table a35

All the items refer to the financial assets of the Italian "money holding sector" (see the note to Table a34); the share of each item held by non-money-market funds is shown separately.

"Total monetary assets" comprise currency in circulation, current account deposits, deposits with agreed maturity up to 2 years, deposits redeemable at notice up to 3 months, repos, money market fund shares/units and money market paper, and debt securities up to 2 years.

"Other deposits" comprise deposits with agreed maturity over 2 years, deposits redeemable at notice over 3 months and forward postal savings certificates, which are measured on the basis of the price at issue.

"Government securities" comprise CCTs, BTPs, CTZs, CTEs and other medium and long-term government securities at face value. The item refers to securities acquired outright; it excludes the securities acquired by the money holding sector under repos but includes those sold.

"Other financial assets" include enterprises' surety deposits; "Other financial assets held by non-money-market funds" include shares issued by residents in Italy.

From January 1999 the balance-of-payments statistics used in computing the components of financial assets and credit are based on the methods established in ESA95.

The main changes concern the inclusion of data on all the deposits held abroad by Italian residents (previously only those held with the foreign branches of Italian banks were surveyed), together with data on trade credits and the

technical reserves of insurance companies (liabilities of the latter towards customers). In addition, Italian residents' holdings of units of foreign investment funds, previously not available, are now included.

Table a36

The items refer to "other residents" and "general government", which have replaced respectively the "non-state sector" and the "state sector" in the statistics compiled until December 1998 (see "Note metodologiche e informazioni statistiche – Aggregati monetari e creditizi dell'area dell'euro: le componenti italiane" in the series Supplements to the *Statistical Bulletin*, Volume X, No. 33, 12 June 2000).

"Bonds placed domestically" are those issued by "other residents" after deducting the amounts held by residents of the rest of the euro area and the rest of the world.

"External finance" comprises the loans disbursed to "other residents" and the debt securities thereof bought at issue by residents of the rest of the euro area and the rest of the world.

"General government debt" is stated at face value and is calculated, in accordance with the EU definition, gross of the Treasury's claims on the Bank of Italy (balances on the Treasury payments account, the sinking fund for the redemption of government securities and other smaller accounts) since December 1998, and of claims on the Bank of Italy and the UIC for the preceding period.

From January 1999 the balance-of-payments statistics used in computing the components of financial assets and credit are based on the methods established in ESA95.

The main changes concern the inclusion of data on all the deposits held abroad by Italian residents (previously only those held with the foreign branches of Italian banks were surveyed), together with data on trade credits and the technical reserves of insurance companies (liabilities of the latter towards customers). In addition, Italian residents' holdings of units of foreign investment funds, previously not available, are now included.

Table a37

Source: Supervisory reports.

The data refer to supervisory capital calculated on a consolidated basis and the corresponding solvency ratio.

Supervisory capital is determined as the algebraic sum of a series of positive and negative items, whose inclusion in core or supplementary capital is admitted, with or without restrictions, according to the item.

Paid-in capital, reserves, provisions for general banking risks and innovative capital instruments – net of any own

shares or capital parts held, intangible assets and loss for the year – are the elements of core capital, which is included in the calculation of supervisory capital without restriction. Revaluation reserves, provisions for losses, hybrid capital instruments and subordinated liabilities – net of any revaluation losses on securities held as financial fixed assets and other negative items – constitute supplementary capital, which is included in the calculation of supervisory capital up to the amount of core capital.

The regulations governing the solvency ratio require banking groups and banks not belonging to a group to satisfy a minimum capital requirement of 8 per cent, defined as the ratio of their supervisory capital to the

total of their on- and off-balance-sheet assets, weighted according to their potential riskiness.

The calculation of the excess amounts and shortfalls of supervisory capital (“Excess capital” and “Capital shortfalls”) is based on the assumption of a minimum capital requirement of 8 per cent for all banks, including those belonging to banking groups, for which the supervisory regulations envisage a requirement of 7 per cent provided that the group as a whole satisfies the 8 per cent requirement.

The solvency ratio figures take account of the prudential requirements for market risks.
