

Economic Bulletin

STATISTICAL APPENDIX

Number 44 April 2007

SYMBOLS AND CONVENTIONS

Unless indicated otherwise, figures have been computed by the Bank of Italy.

In the following tables:

- the phenomenon in question does not occur
 - the phenomenon occurs but its value is not known
 - .. the value is known but is nil or less than half the final digit shown
 - :: the value is not statistically significant
 - (*)* provisional; estimates are in italics
-

INDEX

1 The world economy	Page
1.1 Sources and uses of income: United States	5
1.2 Sources and uses of income: Japan	6
1.3 Sources and uses of income: United Kingdom	7
1.4 Gross domestic product and domestic demand in the newly industrialized Asian economies and selected emerging countries	8
1.5 Consumer prices	10
1.6 Balance of payments: United States	11
1.7 Balance of payments: Japan	12
1.8 Balance of payments: United Kingdom	13
1.9 Balance of payments of the newly industrialized Asian economies and selected emerging countries	14
1.10 International oil prices	16
1.11 Prices in dollars of non-energy raw materials	18
1.12 Indicators of competitiveness	19
1.13 Sources and uses of income: France	21
1.14 Sources and uses of income: Germany	22
1.15 Sources and uses of income: euro area	23
1.16 Industrial production in the euro area	24
1.17 Employment in the euro area	25
1.18 Employment in the euro area: percentage changes on the previous period	27
1.19 Employment in the euro area: percentage changes on the year-earlier period	29
1.20 Unemployment rate in the euro area	31
1.21 Unit labour costs, per capita compensation and productivity: France	33
1.22 Unit labour costs, per capita compensation and productivity: Germany	34
1.23 Unit labour costs, per capita compensation and productivity: Euro 4	35
1.24 Harmonized index of consumer prices: euro area	36
1.25 Harmonized index of consumer prices: main euro-area countries	37
1.26 Index of producer prices of industrial products sold in the domestic market: main euro-area countries	38
1.27 Expectations and forecasts on consumer price inflation	39
1.28 Balance of payments of the euro area: current and capital account	40
1.29 Balance of payments of the euro area: financial account	41
1.30 ECB interest rates	42

	2 The Italian economy	Page
2.1	Sources and uses of income	43
2.2	Industrial production and ISAE business opinion indicators	44
2.3	Labour force, employment and unemployment	45
2.4	Contractual earnings	46
2.5	Actual earnings	48
2.6	Unit labour costs, per capita compensation and productivity	49
2.7	National consumer price index	50
2.8	Harmonized index of consumer prices	52
2.9	Consumer price inflation differentials between Italy and the leading euro-area countries	53
2.10	Index of producer prices of industrial products sold in the domestic market	54
2.11	Average unit values in euros of imported industrial products	55
2.12	Average unit values of exported industrial products	56
2.13	Merchandise exports and imports <i>cif-fob</i> by main countries and areas in 2006	57
2.14	Merchandise exports and imports <i>cif-fob</i> by branch of economic activity and balances in 2006	58
2.15	Balance of payments: current account and capital account	59
2.16	Balance of payments: financial account	60
2.17	Treasury bill yields and interbank rates	61
2.18	Banks and money market funds: balance sheet	62
2.19	Banks: loans and securities portfolios	64
2.20	Italian components of euro-area monetary aggregates, excluding currency	65
2.21	Lending by Italian banks by geographical area and sector	66
2.22	Lending to firms by Italian banks, by maturity, sector, size and geographical area	67
2.23	Bad debts and substandard loans of Italian banks by sector and by geographical area	68
2.24	Supervisory capital and capital requirements	69
2.25	Issues of Italian government securities	70

(1) The interest rates on the "Deposit facility" and on the "Marginal lending facility" are fixed by the ECB Governing Council and represent, respectively, the lower and upper limits of the official interest rate corridor. As of 28 June 2000, the Eurosystem's main refinancing operations are conducted at variable rate auctions.

(1) Before tax; the annual values are the arithmetic means of monthly rates. BOT interest rates (average) are calculated as a quantity-weighted average of the compound allotment rates in the auctions held in the month indicated (3, 6, 12-month and other maturities). Yields are calculated on the basis of the business year (360 days). The interbank rates (overnight, 1, 3, 6 and 12 months) recorded daily on the MID are weighted average bid/ask prices.

(2) The item "capital and reserves" on the liability side is composed of share capital, reserves, the fund for general banking risks and the balance of previous years' profits and losses. The item "current accounts" includes bankers' drafts but does not include time deposits. "Deposits with agreed maturity" include certificates of deposit, time deposits and time savings accounts. "Deposits redeemable at notice" are the same as ordinary savings accounts. The item "Debt securities issued" covers the total debt securities issued by banks, including subordinated liabilities and reverse convertibles. Annual data refer to the month of December. For details see the methodological appendix and tables of "Supplements to the Statistical Bulletin – Monetary Financial Institutions: Banks and Money Market Funds".

(1) The information in this table refers to the universe of banks resident in Italy. The definitions of the aggregates are not always the same as the harmonized ESCB definitions, but they ensure continuity with the statistics traditionally presented by the Bank of Italy. The initial maturity of short-term loans to residents of Italy is 18 months, that of medium and long-term loans is over 18 months. All securities are at book value. Other securities are bonds issued by residents and held in the portfolio of the banks.

Annual data refer to the month of December. For details see the methodological appendix and tables of "Supplements to the Statistical Bulletin – Monetary Financial Institutions: Banks and Money Market Funds".

(1) The Italian components of euro-area monetary aggregates and the growth rates do not include currency because it is not possible to measure the actual quantity of euro banknotes and coins in each country since the introduction of the euro. M1 includes banks and post office current accounts; M2 is the sum of M1 plus deposits with agreed maturity up to 2 years and deposits redeemable at notice up to 3 months; M3 is the sum of M2 plus repurchase agreements, money market fund units, money market securities and bonds issued by MFIs with a maturity of up to 2 years, minus bonds issued by euro-area MFIs held by Italian MFIs. For details see the methodological appendix and tables of "Supplements to the Statistical Bulletin – Monetary and Credit Aggregates of the Euro Area: The Italian Components".

(1) Loans do not include repurchase agreements, bad debts and some smaller items included in the Eurosystem harmonized definition. The breakdown by geographical area is according to customers' place of residence. Data for February 2007 are provisional. – (2) Limited partnerships and general partnerships with fewer than 20 employees. Informal associations, de facto companies and sole proprietorships with 5-20 employees. – (3) Informal associations, de facto companies and sole proprietorships with up to 5 employees. – (4) Net of the effects of reclassification, exchange rate changes and other modifications not due to transactions. – (5) Stocks by geographical area may not add to the total because the figures are taken from different items of the accounting supervisory reports. – (6) Rounding may cause discrepancies.

METHODOLOGICAL NOTES

Table 2.24

The data refer to supervisory capital and the capital ratio, calculated on a consolidated basis (on a solo basis for banks not belonging to a banking group). The Italian branches of foreign banks are not included.

In 2005 the definition of supervisory capital was partly changed following banks' application of the new international accounting standards. The description below refers to the new definition; for that in force until 2004, see the methodological note to Tables E16 and E10 in *Relazione annuale sul 2004 – Appendice*.

Supervisory capital is determined, net of deductions, as the algebraic sum of a series of positive and negative items, whose inclusion in core or supplementary capital is admitted, with or without restrictions, according to the item.

Paid-in capital, reserves, innovative capital instruments, profits brought forward and for the year – net of own shares, goodwill, intangible fixed assets and any losses recorded in prior years and for the year – constitute core capital (tier 1 capital), which is included in the calculation of supervisory capital without restriction. Core capital is increased (decreased) by positive (negative) "prudential filters", which are adjustments made to banks' own funds to safeguard the quality of supervisory capital and reduce its potential volatility consequent on the application of IAS/IFRS.

Revaluation reserves, innovative capital instruments not included in core capital, hybrid capital instruments, subordinated liabilities net gains on equity holdings, other positive elements and the positive supplementary capital "prudential filters" constitute "supplementary capital" (tier 2 capital). This aggregate – net of any revaluation losses on equity holdings, other negative elements and the negative supplementary capital "prudential filters" – is included in the calculation of supervisory capital up to the amount of core capital.

Consolidated supervisory capital consists, in addition to the components of individual bank supervisory capital, of the characteristic items resulting from the consolidation itself (positive or negative consolidation differences, etc.). The deductions consist of equity holdings, innovative capital instruments, hybrid capital instruments and subordinated instruments involving banks and financial corporations and equity holdings in insurance companies and instruments issued by investee insurance companies.

The regulations governing capital require banking groups and banks not belonging to a group to satisfy a minimum capital requirement in relation to their credit risk and market risks. For credit risk the ratio of supervisory capital to total on- and off-balance-sheet assets, weighted according to their potential riskiness, must be equal to at least 8 per cent. The capital charges for market risks concern the risk of fluctuation in the prices of the trading portfolio defined for supervisory purposes (divided between position risk in relation to debt and equity securities, settlement risk, counterparty risk, position risk in collective investment schemes, and options), concentration risk for the same portfolio, and exchange

rate risk and position risk in relation to commodities with reference to the entire banking balance sheet. The capital charges for market risks may be covered not only by core and supplementary capital but also by tier 3 subordinated loans up to the limits established by the applicable supervisory regulations.

In calculating excess capital and capital shortfalls, any special capital limits imposed on individual intermediaries are not considered.

The numerator of the capital ratio consists of supervisory capital and tier 3 subordinated loans. The denominator includes the risk-weighted assets, the market risk capital charges and the “other requirements”, the latter both multiplied by 12.5.

For further information, see *Istruzioni per la compilazione delle segnalazioni sul patrimonio di vigilanza e sui coefficienti prudenziali*.

Table 2.28

The figures for the budget exclude accounting items that are offset under Treasury operations, loan disbursements and repayments and settlements of debts involving state sector bodies or which merely result in accounting transactions between the budget and Treasury operations.

The tax component of state budget receipts refers to the amounts allocated each month to the various chapters of the budget. In fact, as of 1998, the time at which amounts are allocated may not coincide with the time at which they are paid. Tax revenue is not adjusted for tax refunds (included in the budget under payments) and includes VAT accruing to the European Union. The monthly figures are consistent with those published by the Ministry for the Economy and Finance in *Conto Riassuntivo del Tesoro*, except that they are net of accounting transactions with the Sicily and Sardinia regions. The sub-item “Collection account” shows the change in receipts paid using the single mandate procedure and awaiting allocation (including central government taxes, Irap due to the regions and social security contributions due to INPS). A negative (positive) sign indicates that the amounts allocated in the month were higher (lower) than the revenue received.

The formation of the central government borrowing requirement (computed as the sum of the budget plus other central government operations) includes transactions with other general government bodies. Accordingly, the borrowing requirement of local government and social security institutions refers exclusively to their financing needs over and above those covered by central government transfers.

The unconsolidated central government borrowing requirement net of debt settlements and extraordinary revenue, consisting mainly of privatization receipts, is shown as a memorandum item. The data on central government debt settlements and extraordinary revenue are used to provide an estimate of the general government net borrowing requirement.

As of December 2003 Cassa Depositi e Prestiti S.p.A. is no longer part of general government and loans to local governments are included in the item “Borrowing requirement of local government and social security institutions after consolidation”. The Cassa’s deposits with the Treasury and postal deposits pertaining to the Treasury appear in the item “Other central government operations”.

Tables 2.29 and 2.30

General government debt consists of the sector’s total financial liabilities at face value at issue. The debt is consolidated within and between the various sub-sectors, i.e. it does not include liabilities constituting

assets in the same instruments of general government bodies, following the definition adopted in the European Monetary Union's excessive deficit procedure. The aggregate is calculated according to the methods set out in Council Regulation 3605/93/EC by summing the financial liabilities falling in the following categories: currency and deposits, securities other than shares, and loans. Lending by monetary and financial institutions (MFIs) is allocated to the general government sub-sector of the actual borrower, i.e. the body required to make the repayment, and not to the sub-sector of the body that receives the funding.

The discrepancy between the borrowing requirement and the change in the debt is due to differences in the treatment of general government deposits with the Bank of Italy and in the accounting standards used to compute the two statistics. More specifically: a) in the case of the borrowing requirement, securities issues, excluding BOTs, are valued on the basis of their "net proceeds" while for the debt they are stated at face value; b) for the borrowing requirement, liabilities denominated in foreign currency are converted at the exchange rate applying at the time of settlement, while for the debt they are valued at end-of-period exchange rates.

Medium and long-term securities include those issued in repayment of past debts, those issued by the former autonomous agencies, which are repaid from the budget, those issued in 1993 to set up the Treasury's current account with the central bank in accordance with Law 483/1993, and those issued in November 1994 in connection with the conversion of the temporary Treasury account pursuant to Ministerial Decree of 15.11.1994 (76,206 billion lire). The latter, which were initially held in the Bank of Italy's portfolio, were the subject of a bond conversion transaction in December 2002.

The sub-item "Change in central bank current accounts" mainly includes the Treasury payments account (Law 483/1993 and a Ministerial Decree of 19.9.2005) and the sinking fund for the redemption of government securities (Law 432/1993, amended by Decree Law 436/1994 and ratified by Law 110/1996) and, until November 1994, the Treasury's current account with the Bank of Italy and the Treasury suspense account (Law 483/1993).

As of December 2003, when Cassa Depositi e Prestiti S.p.A. ceased to be part of general government, PO deposits include only those pertaining to the Ministry of the Economy and Finance. The item includes ordinary and fixed-term postal savings certificates and postal current accounts and is included, together with the Cassa's deposits with the Treasury, in the item "Currency and deposits"; from the same date lending by the Cassa to general government is included in the items "Other operations" and "Other liabilities". As of September 2006 Cassa Depositi e Prestiti S.p.A. is included among MFIs; from the same date its loans to general government bodies are included in the item "MFI loans".

Following Eurostat's decision of 23 May 2005 the item "Currency and deposits" includes the payments on account made by tax collectors under Decree Law 341/2003, ratified by Law 31/2004, and Decree Law 282/2004, ratified by Law 307/2004, while the debts contracted by Infrastrutture S.p.A. to finance the high-speed train project are included in the items "Medium and long-term securities" and "MFI loans".
