Methodological appendix

General information

Introductory Note¹

This series of the Supplements to the Statistical Bulletin contains detailed information on local government debt². The data refer to the period 2007-12³ and statistics are also published for the first half of 2013. The composition of local government debt by instrument is given for each Italian region, and both the composition by instrument and the distribution by level of government (Regions and autonomous Provinces, Provinces, Municipalities, and other entities) are provided for each of the four macro-regions (North-West, North-East, Centre, South/Islands).

At the end of 2012 local government debt amounted to €115.3 billion (accounting for 5.8 per cent of total general government debt); the ratio of local government debt to GDP was 7.4 per cent (Figure 1). The debt decreased in 2012 by €2.4 billion (Figure 2). The ratio to GDP has remained unchanged with respect to the previous year. In relation to macro-regional GDP, local government debt was 6.2 per cent in the North-West, 4.7 per cent in the North-East, 9.4 per cent in the Centre and 9.8 per cent in the South and Islands (Figure 3)⁴. The movements in these debt ratios over the last four years are shown for each region in Figure 4.

Considering the breakdown of local government debt by macro-region, 41.9 per cent was contracted by bodies in the North of Italy (27.5 percent in the North-West and 14.5 per cent in the North-East); 27.4 per cent in the Centre; and 30.7 per cent in the South and Islands (Figure 5A). By type of body, 42.3 per cent of the debt was contracted by Municipalities, 35.6 per cent by Regions, 7.7 per cent by Provinces, and 14.5 per cent by other local government bodies, mainly those providing health services (Figure 5B).

By instrument, 28.4 per cent of local government debt consisted in loans from resident monetary financial institutions (MFIs), 37.9 per cent loans from Cassa Depositi e Prestiti S.p.A⁵, and 2.6 per cent loans from non-resident intermediaries (Figure 5C). Bonds issued abroad accounted for 14.2 per cent, those issued in Italy for 7.2 per cent; other transactions, mainly trade liabilities assigned to financial intermediaries without recourse and securitizations, accounted for 9.8 per cent.

1. Prepared by Enrico Bonamici and Emilio Vadalà.

2. Local government debt is calculated using the methodology established in European Council Regulation 479/2009 by summing the following categories of financial liabilities: currency and deposits, non-equity securities, and loans with the exception of liabilities held by other general government bodies. The debt therefore excludes liabilities stemming from the delay in payments related to supplies of goods and services (except for those assigned to financial intermediaries without recourse starting from 2005 under the accounting rules issued by Eurostat in July 2012) and derivative financial instruments (except for the upfront payments received by local authorities as part of contracts drawn up with banks operating in Italy and those under contracts drawn up with foreign counterparties starting from 2001 under the accounting rules issued by Eurostat in March 2008). In the instrument of loans are included, as of 2005, public-private partnership transactions that under the accounting rules issued by Eurostat in February 2004 have to be consolidated in public accounts.

3. Compared with the data published in the Supplement to the Statistical Bulletin - Local Government debt No. 55 of October 2012, the local government debt has been revised for the normal updating of the sources. The complete series from 1998 onwards is available in the historical tables section of the Bank of Italy's website:
<http://bip.bancaditalia.it/4972unix/homebipentry.htm?dadove=corr&lang=eng>.

4. The source for regional GDP is Istat, *Conti economici regionali* for the years 2007-2011, SVIMEZ for the year 2012.

5. Net of the part of the specific-purpose loans not yet disbursed by Cassa Depositi e Prestiti and included under deposits in the supervisory reports.

The trend in local government debt in the period 2007-12 by geographical area, type of body and financial instrument is shown in Figures 6A-C. The loan component rose from 67.7 per cent of the total in 2011 to 68.9 per cent in 2012; the securities component decreased from 22.1 to 21.3 per cent; the "other transactions" decreased from 10.2 to 9.8 per cent.

This supplement also contains information on transactions in financial derivatives entered into by local government bodies (Table 33)⁶. The market value of the transactions and the number of entities involved are shown for each region. The figures are prepared on the basis of Supervisory statistical reports and Central Credit Register data, which cover only contracts concluded with intermediaries operating in Italy; moreover the central credit register data are subject to a reporting threshold⁷. The figures provided are therefore to be considered as an underestimate of the total volume of business⁸. Negative market values for local government (corresponding to positive market values for intermediaries) do not count towards the former's debt, as they are contingent liabilities.

6. Compared with the data published in the Supplement to the Statistical Bulletin, Local Government Debt, No. 55, October 2012, the data in Table 33 have been revised for the normal updating of the sources and to take account of the results of an analysis concerning the correct statistical representation of some derivative transactions. This analysis resulted in an increase in their notional value (by €900 million for the years 2008-2011) and in their negative market value (by €55 million at end-2008, €66 million at end-2009, €118 million at end-2010 and €170 million at end-2011).

7. Reduced from €75,000 to €30,000 in January 2009. For this reason the figures for 2009 are not comparable with those of previous years, especially regarding the number of local government bodies.

8. According to estimates prepared by the Ministry for the Economy and Finance on the basis of the compulsory notifications by Regions, Provinces and Municipalities (other local authorities are not subject to the notification requirement), which do not include the derivative components of loan contracts, at the end of 2012 transactions with banks resident in Italy accounted for about 50 per cent of the total.

Source: Bank of Italy, Supervisory reports and Central Credit Register.

(1) The derivative components of loan contracts, such as interest rate caps on floating rate loans, are included. Banks operating in Italy is to be taken as meaning banks authorized in Italy and the Italian branches of foreign banks. - (2) Negative market value for the local authority and positive for the bank; it is the potential payment for the local authority if the contract were closed at the time of the observation. It is not included in the calculation of the local authority's debt. From December 2008 onwards, following a change in the structure of supervisory reports, reference has been made to fair value (previously it refers to intrinsic value). For the breakdown by region, use was made of weights deriving from reports to the Central Credit Register. From January 2005 onwards, with reference to intermediaries operating in Italy, the Central Credit Register has observed, on a monthly basis, the negative market value of financial derivatives for local authorities with an exposure above the observation threshold (reduced from €75,000 to €30,000 as of January 2009). - (3) Number of local authorities (with an exposure above the observation threshold – see footnote 2) that are parties to derivative contracts having a negative market value. - (4) Positive market value for the local authority and negative for the bank (see footnote 2).

METHODOLOGICAL APPENDIX

This publication contains the annual series on local government debt and the situation at 30 June 2013. For the four macro-regions the figures are shown by instrument (securities, loans from monetary financial institutions and Cassa depositi e prestiti S.p.A, other liabilities), and for the different types of local government bodies (Regions and autonomous provinces, Provinces, Municipalities and other local government bodies) and for each region are analyzed by instrument.

Local government debt is consolidated between the other subsectors of general government; in other words it excludes liabilities that are assets of other general government bodies. Bonds are valued at their face value at issue.

The data for loans granted by resident monetary financial institutions (MFIs, including Cassa Depositi e Prestiti S.p.A) are derived from accounting supervisory reports. Loans granted by Cassa Depositi e Prestiti are calculated net of the part of the specific-purpose loans not yet disbursed and included in the deposits in the supervisory reports.

Loans are allocated to local government if the final borrower, i.e. the body required to repay the loan, belongs to that subsector. Accordingly, loans disbursed to local government that are to be repaid by the state are excluded.

The other liabilities mainly include securitizations that qualify as loans on the basis of the criteria established by Eurostat, financial leasing transactions carried out with non-bank financial institutions, local government trade payables which the creditor firms have assigned to the financial sector without recourse, thereby transferring the risk, in accordance with Eurostat's decision of 31 July 2012, and, as of 2005, public-private partnership transactions that under the accounting rules issued by Eurostat in February 2004 have to be consolidated in public accounts.

If a securitization involves a pool of assets belonging to several local government bodies, the debt is divided among them on the basis of each body's share of the claims securitized. The securitizations of receivables from health-sector bodies are included at the level of individual regions.

Foreign currency liabilities are changed at the exchange rate obtaining at the end of the reference period; the amounts shown take account of the effects of swaps entered into by issuers.

GENERAL INFORMATION

I - Unless indicated otherwise, figures have been computed by the Bank of Italy.

II - Symbols and Conventions:

- the phenomenon in question does not occur;
- the phenomenon occurs but its value is not known;
- .. the value is known but is nil or less than half the final digit shown.

Figures in parentheses in roman type () are provisional. those in parentheses in italics () are estimated.

III - The tables are identified both by a number and by an alphanumeric code that defines the content of the table in the database in the electronic archive in which information to be released to the public is held. A similar code identifies the different aggregates shown in each table.

IV - The methodological notes in the last part of the Supplement are identified by electronic codes that refer to the tables and, within each table, to the individual aggregates. Notes that refer to a single observation are also identified by the date of that observation.
