Methodological appendix

General information

Introductory note⁽¹⁾

This Supplement contains detailed information on local government debt (consolidated and unconsolidated)⁽²⁾. The data refer to the period 2010-2015⁽³⁾.

Compared with the data published in the Supplement to the Statistical Bulletin - Local Government Debt No. 57 of 30 October 2015, the time series for local government debt have been revised taking account of the ordinary updating of the sources⁽⁴⁾.

At the end of 2015 local government consolidated debt amounted to €92.3 billion, equal to 4.3 per cent of total general government debt; the ratio of local government debt to national GDP⁽⁵⁾ was 5.6 per cent (Figure 1). The debt decreased in 2015 by €6.6 billion (Figure 2) and the ratio to GDP decreased by 0.5 percentage points with respect to the previous year. Unconsolidated debt decreased marginally (by €0.2 billion, from 8.7 to 8.6 per cent of GDP).

In relation to macro-regional GDP, local government consolidated debt at the end of 2015 was 5.0 per cent in the North-West, 3.4 per cent in the North-East, 6.7 per cent in the Centre and 7.8 per cent in the South and Islands (Figure 3)⁽⁶⁾.

Figure 4 shows the changes, for each region, in the consolidated and unconsolidated debt ratios to each region's GDP over the last four years. In the face of an almost universal reduction of consolidated debt, in some regions unconsolidated debt rose as a result of loans granted by the MEF to the Regions and local government entities as part of the measures aimed at accelerating the payment of trade arrears and to finance a regional bond buy-back.

(1) Prepared by Enrico Bonamici and Mauro Bucci

(2) Local government debt is calculated - consistently with the methodological criteria established in European Council Regulation 479/2009 - by summing the following categories of financial liabilities: currency and deposits, debt securities, and loans. Unlike consolidated debt, unconsolidated debt also includes local government liabilities held by other general government subsectors (these liabilities are also known as consolidating items). Unconsolidated debt thus provides a measure of the overall indebtedness of local government entities, regardless of the nature (private or public) of the creditor. Consolidating items are mainly: i) advances from the Ministry of Economy and Finance (MEF) for the payment of trade payables; ii) the share of loans granted by Cassa Depositi e Prestiti (CDP) to local government that, at the time of the CDP's transformation into a corporation (and its exclusion from the sphere of general government), was attributed to the MEF; iii) loans granted by the MEF to the Regions to offset their health care deficits. Starting with this issue of the Supplement, the consolidating items also include: 1) loans granted by MEF to some Regions to finance the bond buy-back operations completed in December 2015; 2) advances disbursed since 2013 by the Ministry of the Interior to the Provinces and Municipalities as part of the *Fondo di rotazione per assicurare la stabilità finanziaria degli enti locali* (an equalization fund to ensure local government financial stability).

(3) The composition of local government debt by instrument is given for each Italian region, whereas for each of the four macro-regions (North-West, North-East, Centre, South and Islands) the distribution is given both by instrument and by sector (Regions and Autonomous Provinces, Provinces, Municipalities, and other entities).

(4) Furthermore, the time series for the consolidating items and unconsolidated debt were revised to include advances made by the Ministry of the Interior to the Provinces and Municipalities, starting in 2013, using the Fund (see Note 2). The updated time series of local government debt since 1998 is also available in the Statistical Database in the statistics section of the Bank of Italy's website (<https://infostat.bancaditalia.it/inquiry/>).

(5) Ratios to GDP for 2015 were computed using the GDP estimate published in September 2015 in the *Nota di Aggiornamento del Documento di Economia e Finanza 2015* (Update to the Economic and Financial Planning Document of 2015).

(6) The source for regional GDP in the years 2010-14 is Istat (Conti economici territoriali); for 2015 regional figures were estimated by applying the ratios observed in 2014 between regional and national GDP to the GDP estimate published in September 2015 in the *Nota di Aggiornamento del Documento di Economia e Finanza 2015*.

At the end of 2015 some 45.9 per cent of local government consolidated debt had been contracted by the Municipalities, 34.1 per cent by the Regions, 8.5 per cent by the Provinces, and 11.5 per cent by other local government bodies, mainly those providing health services. The figures for unconsolidated debt are as follows: 49.3 per cent contracted by the Regions, 37.3 per cent by the Municipalities, 5.8 per cent by the Provinces, and 7.6 per cent by other entities (Figure 5A). By instrument, 74.5 per cent of the consolidated debt were loans (44.2 per cent from Cassa Depositi e Prestiti,⁽⁷⁾ 27.4 per cent from resident monetary financial institutions, and 3.0 per cent from non-resident intermediaries) and 18.6 per cent were debt securities (11.5 per cent issued abroad and 7.1 per cent issued in Italy); other transactions, mainly trade liabilities sold to financial intermediaries without recourse and securitizations, accounted for 6.9 per cent. Loans provided by other subsectors of general government accounted for 34.1 per cent of unconsolidated debt (Figure 5B).

The trend in the ratio of local government debt (consolidated and unconsolidated) to national GDP in the period 2012-15 by geographical area, sector and financial instrument is shown in Figures 6A-C. In 2015 the ratio of consolidated debt to national GDP declined in all of Italy's macro-regions (Figure 6A) and for all sectors (Figure 6B). The ratio of unconsolidated debt to national GDP decreased marginally, except in the sector of the Regions, for which there was an increase. Broken down by instrument (Figure 6C), there was a general decline of consolidated debt, most markedly for securities issued abroad and for loans from resident MFIs. Loans made by other general government entities rose from 2.6 per cent of GDP in 2014 to 2.9 per cent in 2015.

This supplement also contains data on transactions in financial derivatives between local government and intermediaries operating in Italy⁽⁸⁾. At the end of December 2015 local entities holding derivative contracts totalled 130, of which 10 Regions, 17 Provinces, and 90 Municipalities, 14 fewer entities than at the end of 2014. The negative market value for local government entities (positive for intermediaries), which is excluded from the calculation of local government debt (since it represents a contingent liability) amounted to €1.3 billion (€1.4 billion at end-2014). The notional value of the contracts declined to €8.6 billion in December 2015 from €9.3 billion at the end of 2014. Table 33 contains a breakdown by region of the market value of these transactions and the number of entities involved.

(7) Net of the part of the specific-purpose loans not yet disbursed by Cassa Depositi e Prestiti and included under deposits in the supervisory reports

(8) Based on supervisory statistical reports and Central Credit Register data, which cover only contracts concluded with intermediaries operating in Italy. Furthermore, the Central Credit Register data only takes account of transactions for amounts above the reporting threshold, which in January 2009 was lowered from €75,000 to €30,000. The data provided are, therefore, a conservative estimate of the total number of transactions.

Source: Bank of Italy, Supervisory reports and Central Credit Register.

(1) The derivative components of loan contracts, such as interest rate caps on floating rate loans, are included. Banks operating in Italy is to be taken as meaning banks authorized in Italy and the Italian branches of foreign banks. - (2) Negative market value for the local authority and positive for the bank; it is the potential payment for the local authority if the contract were closed at the time of the observation. It is not included in the calculation of the local authority's debt. From December 2008 onwards, following a change in the structure of supervisory reports, reference has been made to fair value (previously it refers to intrinsic value). For the breakdown by region, use was made of weights deriving from reports to the Central Credit Register. From January 2005 onwards, with reference to intermediaries operating in Italy, the Central Credit Register has observed, on a monthly basis, the negative market value of financial derivatives for local authorities with an exposure above the observation threshold (reduced from €75,000 to €30,000 as of January 2009). - (3) Number of local authorities (with an exposure above the observation threshold – see footnote 2) that are parties to derivative contracts having a negative market value. - (4) Positive market value for the local authority and negative for the bank (see footnote 2).

METHODOLOGICAL APPENDIX

GENERAL INDICATIONS

This publication contains the annual series on local government debt (consolidated and unconsolidated). For the four macro-regions the figures are shown by instrument (securities, loans from monetary financial institutions and Cassa depositi e prestiti S.p.A, other liabilities), and for the different types of local government bodies (regions and autonomous provinces, provinces, municipalities and other local government bodies) and for each region are analyzed by instrument.

Local government consolidated excludes liabilities that are assets of other general government bodies. Bonds are valued at their face value at issue. The data for loans granted by resident monetary financial institutions (MFIs, including Cassa Depositi e Prestiti S.p.A) are derived from accounting supervisory reports. Loans granted by Cassa Depositi e Prestiti are calculated net of the part of the specific-purpose loans not yet disbursed and included in the deposits in the supervisory reports.

Unconsolidated debt includes liabilities of local government units held by other general government bodies (these liabilities are also known as consolidating elements). Unconsolidated debt thus provides a measure of the overall financial position of local government units, regardless of the nature (private or public) of the creditor.

Liabilities are allocated to local government if the final borrower, i.e. the body required to repay the loan, belongs to that subsector. Accordingly, liabilities that are to be repaid by the state are excluded.

The other liabilities mainly include local government trade payables which the creditor firms have assigned to the financial sector without recourse, thereby transferring the risk, securitizations reclassified as loans⁽¹⁾, financial leasing transactions carried out with non-bank financial institutions, public-private partnership transactions consolidated in public accounts.

Foreign currency liabilities are converted in euros at the exchange rate observed at the end of the reference period; the amounts shown take account of the effects of swaps entered into by issuers.

(1) If a securitization involves a pool of assets belonging to several local government bodies, the debt is divided among them on the basis of each body's share of the claims securitized. The securitizations of receivables from health-sector bodies are included in the regional debt.

GENERAL INFORMATION

- I - Unless indicated otherwise, figures have been computed by the Bank of Italy,
- II - Symbols and Conventions:
 - the phenomenon in question does not occur;
 - ,,,, the phenomenon occurs but its value is not known;
 - ,, the value is known but is nil or less than half the final digit shown,
Figures in parentheses in roman type () are provisional, Those in parentheses in italics () are estimated,
- III - The tables are identified both by a number and by an alphanumeric code that defines the content of the table in the database in the electronic archive in which information to be released to the public is held, A similar code identifies the different aggregates shown in each table,
- IV - The methodological notes in the last part of the Supplement are identified by electronic codes that refer to the tables and, within each table, to the individual aggregates, Notes that refer to a single observation are also identified by the date of that observation,
