

BANCA D'ITALIA

**Supplements to the Statistical Bulletin
Monetary and Financial Indicators**

**Public Finance Statistics
in the European Union**

New series

Volume X Number 68 - 29 December 2000

GENERAL INFORMATION

I - Unless indicated otherwise, figures have been computed by the Bank of Italy.

II - Symbols and Conventions:

- the phenomenon in question does not occur;
- the phenomenon occurs but its value is not known;
- .. the value is known but is nil or less than half the final digit shown.

Figures in parentheses in roman type () are provisional, those in parentheses in italics () are estimated.

III - The tables are identified both by a number and by an alphanumeric code that defines the content of the table in the database in the electronic archive in which information to be released to the public is held. A similar code identifies the different aggregates shown in each table.

IV - The methodological notes in the last part of the Supplement are identified by electronic codes that refer to the tables and, within each table, to the individual aggregates. Methodological notes that refer to a single observation are also identified by the date of the observation.

This Supplement shows amounts in both lire and euros.

For the period prior to the introduction of the single currency on 1 January 1999, the figures in euros have been obtained by converting the amounts in lire at a rate corresponding to the irrevocable exchange rate of the lira adopted from the beginning of 1999 (1,936.27 lire to the euro). For these figures the indication "values in euros" is thus to be taken as meaning "values in lire converted at the irrevocable exchange rate".

The publications produced on paper and CD-ROM only show amounts in euros from 1997 onwards, when the lira was linked to the other currencies of the euro area through the Exchange Rate Mechanism. In this period the market value of the lira showed only small fluctuations against the other euro-area currencies; international comparisons based on the figures expressed in euros should be made with the necessary caution. The wide fluctuations in market exchange rates before 1997 mean that it is not generally advisable to make international comparisons on the basis of values converted into a common currency using a fixed exchange rate.

**PUBLIC FINANCE STATISTICS
IN THE EUROPEAN UNION (1980-1999)**

INTRODUCTORY NOTE

This series of the Supplements to the Statistical Bulletin provides information on the public finances of the countries belonging to the European Union. It reports data on the general government consolidated accounts and gross debt and compares them with the figures for the leading non-EU industrial countries.

The statistical series refer to the period from 1980 to 1999, except for the detailed data on collective and individual consumption, which go from 1995 to 1999. With the cooperation of the European Commission some of the data on the EU countries have been reclassified; consequently the figures published here for total revenue and total expenditure from 1980 to 1994 differ from those given by the Economic and Financial Affairs Directorate General (see the Methodological appendix). For the G-7 countries not belonging to the European Union (the United States, Japan and Canada), the statistics have been reworked to increase their comparability with those of the EU countries.

The switch to the new European system of national accounts, known as ESA95, from that known as ESA79 (see the Methodological appendix) has given rise to some discontinuities in the series on the EU countries' general government accounts. For the sake of homogeneity, the switch from ESA79 to ESA95 data is made here for every country in the same year. Accordingly, for all the series except for those on general government debt, the data from 1980 to 1994 are based on ESA79 and those from 1995 onwards on ESA95; for the debt figures, the switch is made in 1996.

The series showing the consolidated accounts balances and gross debt are given first and followed by those on revenue and expenditure.

* * *

The nineties. – The data published in the Supplement make it possible to examine the process whereby the public finances of numerous European countries were consolidated in this decade.

For the European Union as a whole, general government net borrowing declined from 2.2 per cent of GDP in 1989 to 0.6 per cent in 1999 (Figure 1). Of the total improvement 0.6 percentage points came from the reduction in interest payments in relation to GDP and 1 point from the increase in the primary surplus from 2.5 to 3.5 per cent of GDP, which was due to the reduction of about 0.2 points in the primary expenditure ratio and the increase of about 0.7 points in the revenue ratio. General government debt rose by more than 13 percentage points to 67.6 per cent of GDP. Among other things, this result reflected the growth in Italy's debt ratio up to 1995 and that in Germany's up to 1999. The aggregates referred to above were also affected by the switch from ESA79 to ESA95.

Two distinct phases can be observed in the decade: the first, lasting until 1993, in which budgetary balances deteriorated and the second, from 1994 onwards, in which they gradually improved.

Between 1989 and 1993 general government net borrowing in the European Union as a whole increased by 4 percentage points to 6.2 per cent of GDP. In the same period the primary balance swung from a surplus of 2.5 per cent of GDP to a deficit of 0.8 per cent.

The improvement in the public finances that began in 1994 was partly in response to the convergence criteria established in the Maastricht Treaty of February 1992 to identify the countries qualifying to participate from the start in Stage Three of Monetary Union.

Between 1993 and 1996 the EU-wide ratio of general government net borrowing to GDP fell by 2 percentage points. In 1997, the reference year for the verification of compliance with the convergence criteria, some countries recorded very substantial falls in this ratio: Italy, 4.4 percentage points; Greece, 3.2 points; and the United Kingdom, 2.4 points. Accordingly, between 1993 and 1997 the ratio for the EU as a whole fell by 3.8 percentage points to 2.4 per cent, the first time in the nineties it had been below the 3 per cent limit laid down in the Maastricht Treaty. The improvement was attributable to the reduction of 0.4 percentage points in the ratio of interest payments to GDP and, for the remaining part, to the increase recorded in the primary surplus ratio, to which all the EU countries contributed. The good performance of the latter was due to the reduction of 4.2 percentage points in the primary expenditure ratio, offset only in part by that of nearly 1 point in the revenue ratio. As mentioned earlier, the aggregates referred to above were also affected by the switch from ESA79 to ESA95. In particular, the movements in the overall and primary balances and in interest payments were basically the same under the two systems, but the composition of the change in the balance of revenue and primary expenditure was different. On the basis of ESA79, instead of decreasing in relation to GDP between 1993 and 1997, revenue would have remained basically unchanged.

In 1998 the ratio of EU general government net borrowing to GDP recorded a further fall of about 1 percentage point. In 1999, in conformity with the Stability and Growth Pact commitments, the adjustment of the public finances of the 11 countries making up the euro area continued, despite the slowdown in GDP growth. The improvement in the area's budgetary position was largely, and to an almost equal extent, due to the reduction in the ratio of interest payments to GDP and the increase in that of the primary balance, which benefited from the strong performance of revenue.

Two phases can also be distinguished for general government debt: in the first it rose in relation to GDP and in the second it declined. The period in which the debt ratio continued to rise lasted from 1989, when it stood at 54 per cent, until 1996, when it stood at 72.1 per cent; subsequently, it declined slowly and was equal to 67.6 per cent at the end of the decade. In 1999 the debt ratio was still above the target level of 60 per cent in eight EU countries, and still above 100 per cent in three: Belgium (114.4 per cent), Greece (104.4 per cent) and Italy (115.1 per cent).

Although the consolidation of the public finances in the leading EU countries (France, Germany, Italy and the United Kingdom) had many common features, there were nonetheless some differences as regards the levels of the balances, their dynamics and the size of the budget.

In 1989 the leading EU country with the most favourable general government budgetary position was the United Kingdom, with a surplus equal to 1 per cent of GDP; the country at the other extreme was Italy with a deficit equal to 9.8 per cent (Figure 1). In 1999 the best placed leading country was still the United Kingdom, with a surplus equal to 1.2 per cent of GDP, and the worst placed was still Italy, with a deficit equal to 1.9 per cent. Over the decade there was thus a pronounced reduction in the dispersion of the budgetary positions of the leading EU countries. As regards these countries' primary balances, in 1989 Italy was the only one with a deficit (1.1 per cent of GDP), while the United Kingdom had the largest surplus (5.1 per cent); in 1999 Italy had the largest surplus (4.9 per cent of GDP) and France the smallest (1.6 per cent).

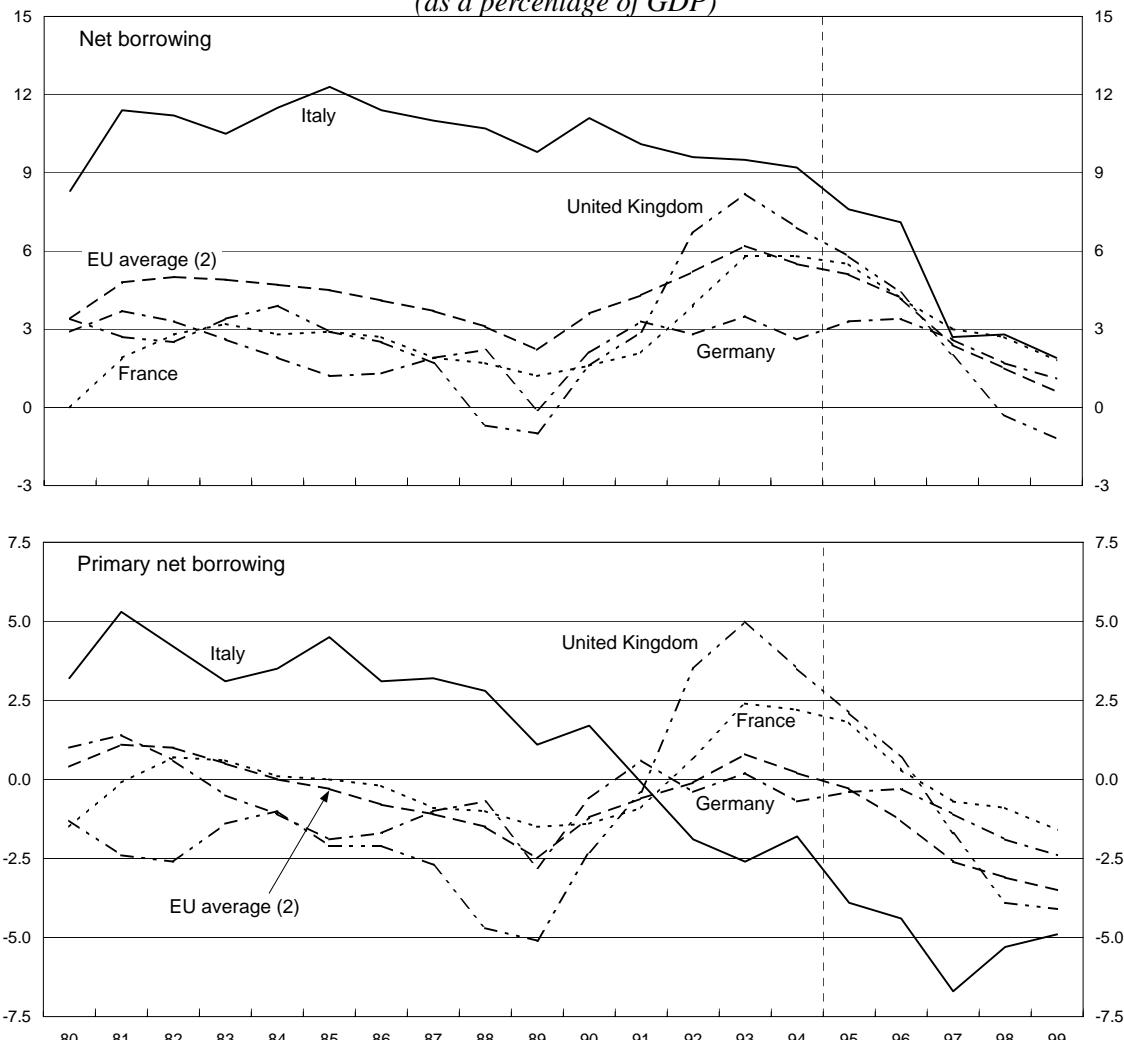

Turning to the movements in the balances, the United Kingdom was the country in which the overall balance and the primary balance showed the largest changes, both in the period from 1989 to 1993 and in the subsequent period. Italy's balances, and especially the primary balance, basically improved over the whole decade. Germany was the country that showed the smallest changes.

As regards the size of the budget, throughout the decade, France and the United Kingdom were the countries with respectively the highest and the lowest ratios to GDP of primary expenditure and tax revenue plus social security contributions (Figures 2 and 3). There was no reduction in the dispersion of these aggregates over the decade. In 1989 primary expenditure in Germany and Italy was equal to respectively 42.6 and 43.1 per cent of GDP, close to the EU average of 43.3 per cent. At the end of the decade the situation had not changed significantly, although Italy's ratio was slightly lower than Germany's (42 per cent, as against 44.3 per cent and an EU average of 43.1 per cent). Turning to interest payments, the reduction in the dispersion of their ratio to GDP in the leading EU countries was largely due to the large reduction in Italy's ratio. Nonetheless in 1999 the latter was still well above the EU average: 6.8 per cent of GDP, as against 4.1 per cent. By contrast, the ratios of the other leading EU countries were close to the EU average (Figure 2).

Italy's public finances were marked by serious imbalances at the beginning of the decade: in 1989 general government net borrowing was equal to 9.8 per cent of GDP, about 9 percentage points more than the average for the other EU countries; the debt ratio was equal to 95.8 per cent and rising rapidly. In 1999 net borrowing was down to 1.9 per cent of GDP, still above the EU average of about 1.5 per cent but well below the limit of 3 per cent laid down in the Maastricht Treaty, while the debt ratio was slowly falling.

The improvement in Italy's budgetary position was largely due to the increase of 4.9 percentage points in the ratio of revenue to GDP and the fall of 2 points in that of interest payments. In relation to GDP primary expenditure decreased by only 1.1 percentage points, entirely as a result of the fall in the capital expenditure ratio, since the current expenditure ratio rose slightly. In 1989 taxes and social security contributions were equal to 39 per cent of GDP, nearly 4 percentage points below the average for the other EU countries; in 1999 the ratio was 43.3 per cent, about half a point above the EU average. In the same period primary expenditure declined from 43.1 per cent of GDP, in line with the EU average, to 42 per cent, about half a point below (for more details on developments in Italy, see the Bank of Italy's Annual Report for 1999).

Prepared by Paola Umaldi and Stefania Zötteri. The Bank of Italy thanks the Economic and Financial Affairs Directorate General of the European Commission, Eurostat and the OECD for having given permission to use their data.

METHODOLOGICAL APPENDIX

GENERAL NOTES

The series refer to the consolidated general government accounts of the EU countries (Belgium, Denmark, Germany, Greece, Spain, France, Ireland, Italy, Luxembourg, the Netherlands, Austria, Portugal, Finland, Sweden and the United Kingdom) and the remaining G-7 countries (the United States, Japan and Canada).

The sources used are as follows:

- for Italy: Istat (figures published by the Ministry of the Treasury, the Budget and Economic Planning in *Relazione generale sulla situazione economica del Paese*);
- for the EU countries: European Commission, DG II Economic and Financial Affairs, *General Government Data*, March 1999 and April 2000, and Eurostat, http://europa.eu.int/new_cronos/, supplemented by data supplied directly by the Commission;
- for the United States, Japan and Canada: OECD, *Statistical Compendium*, 2000-1.

Owing to the differences between the methods used by the OECD and the other sources in constructing general government accounts, the single items are strictly comparable only for the EU countries. However, for the latter there is a break between 1994 and 1995 in every series except the debt series since the figures for 1995-99 are based on the new European system of accounts (ESA95), while those for 1980-1994 are based on the earlier system (ESA79; for the main differences between the two systems, see the Methodological appendix to the previous Supplement in this series). For the debt series the break is between 1995 and 1996. In the case of the United Kingdom, the individual items of the general government accounts are based on ESA95 for the years from 1989 to 1994 as well, whereas the (total and primary) net borrowing series and the debt series are based on ESA95 from respectively 1995 and 1996. The discontinuities, except for those concerning the individual items of the UK accounts, are indicated by a thicker vertical line.

Some of the Commission data concerning individual items of the general government accounts of the EU countries have been adjusted. In particular, for those based on ESA79 (from 1980 to 1994) the Commission disaggregation does not show total capital revenue and total capital expenditure separately, but gives only the balance, i.e. net capital expenditure. Here, in order to obtain the separate items, the Commission data have been supplemented by other data provided by Eurostat and the Commission itself, and by Bank of Italy estimates where these were not available. As a first step series were constructed for capital revenue. These were then used, together with the Commission series for net capital expenditure, to obtain series for capital expenditure. The capital revenue and expenditure series were then used to recalculate the series for total revenue and total expenditure, which thus differ from those used by the EU Commission (in particular, total expenditure was not obtained by adding capital expenditure net of capital revenue to current expenditure, as the Commission does, but by adding total capital expenditure). Instead, for the data based on ESA95 (from 1995 to 1999), total expenditure series (obtained as the sum of current and capital expenditure) and total revenue series (inclusive of capital revenue) are available from the Commission for all the EU countries except Greece, for which the total expenditure and total revenue data shown are net of capital revenue.

The data on EU countries' current transfers from 1995 to 1999 were obtained as the difference between the series of current expenditure and the series of interest payments and final consumption expenditure provided by the Commission.

The data on final consumption expenditure were decomposed into collective and individual consumption only for those based on ESA95.

For the individual items of the accounts averages were calculated for the EU as a whole and for the countries in the euro area since 1999 (Belgium, Germany, Spain, France, Ireland, Italy, Luxembourg, the Netherlands, Austria, Portugal and Finland) – both including and excluding Italy – and for the three leading countries apart from Italy: France, Germany and the United Kingdom. The averages were weighted using the ratios of the GDP of each country expressed in euros to the GDP of the group of countries in question. The values of GDP used were those determined for the excessive deficit procedure. Where a figure is missing for a country, the average was calculated omitting that country.

The figures for Germany up to and including 1990 refer to the country's western regions.

Because of rounding, the sum of the separate items may sometimes differ from the total shown.

NOTES TO THE TABLES

The order in which the tables are shown is based on their code numbers. The notes to each table are set out below, together with references to the “Notes to the classification variables” section where appropriate.

TUEE0100 – NET BORROWING (+) / LENDING (-)

The balance of the consolidated general government accounts (excluding financial transactions). The item corresponds to the net resources that general government makes available to other sectors.

TUEE0110 – PRIMARY NET BORROWING (+) / LENDING (-)

Net borrowing or lending excluding interest payments (see note to Table TUEE280).

TUEE0120 – CURRENT ACCOUNT BALANCE

Difference between current expenditure and current revenue (see notes to Tables TUEE160 and TUEE260). A positive balance indicates a deficit, a negative balance a surplus, i.e. public saving.

TUEE0130 – CAPITAL ACCOUNT BALANCE

Difference between capital expenditure and capital revenue.

TUEE0140 – GROSS PUBLIC DEBT

The definition is that adopted for the excessive deficit procedure provided for in the Treaty on the European Union (on the basis of the methods specified in Council Regulation 3605/93). The aggregate refers to the total gross debt at nominal value outstanding at the end of the year of the sector of general government, with the exception of those liabilities of which the corresponding financial assets are held by the sector of general government.

TUEE0150 – TOTAL REVENUE

The sum of current revenue and capital revenue.

TUEE0160 – CURRENT REVENUE

The sum of direct taxes, indirect taxes, social security contributions and other current revenue. Current revenue does not include current transfers from the rest of the world.

TUEE0170 – TAX REVENUE AND SOCIAL SECURITY CONTRIBUTIONS

The sum of direct and indirect taxes, social security contributions and capital taxes (see the notes to Tables TUEE210, TUEE220 and TUEE230).

TUEE0180 – TAX REVENUE AND SOCIAL SECURITY CONTRIBUTIONS, EXCLUDING CAPITAL TAXES

The sum of direct and indirect taxes and social security contributions (see the notes to Tables TUEE210, TUEE220 and TUEE230).

TUEE0190 – TAX REVENUE

The sum of direct and indirect taxes and capital taxes (see the notes to Tables TUEE210 and TUEE220).

TUEE0200 – TAX REVENUE, EXCLUDING CAPITAL TAXES

The sum of direct and indirect taxes (see the notes to Tables TUEE210 and TUEE220).

TUEE0210 – DIRECT TAXES

Taxes on income and wealth due to general government or the rest of the world.

TUEE0220 – INDIRECT TAXES

Taxes linked to the production and importation of goods and services due to general government or the institutions of the European Union (including taxes on the production of agricultural products and sugar and customs duties).

TUEE0230 – SOCIAL SECURITY CONTRIBUTIONS

Sum of actual social security contributions paid by workers and employers (directly or through ad hoc agencies) and imputed social security contributions. The figures for Canada do not include imputed social security contributions.

TUEE0240 – TOTAL EXPENDITURE

Sum of current and capital expenditure.

TUEE0250 – TOTAL EXPENDITURE, EXCLUDING INTEREST PAYMENTS

Difference between total expenditure and interest expenditure (see the note to Table TUEE280).

TUEE0260 – CURRENT EXPENDITURE

Sum of current transfers, interest expenditure and final consumption expenditure.

TUEE0270 – CURRENT EXPENDITURE, EXCLUDING INTEREST PAYMENTS

Difference between current expenditure and interest expenditure (see the note to Table TUEE280).

TUEE0280 – INTEREST PAYMENTS

Interest payments and other borrowing costs.

TUEE0290 – FINAL CONSUMPTION EXPENDITURE

Sum of the expenditure incurred by general government (compensation of employees, purchases of goods and services and consumption of fixed capital) for the satisfaction of individual or collective needs (see the note to Table TUEE310).

TUEE0300 – COMPENSATION OF EMPLOYEES

General government payments in cash or kind to employees, including net earnings and actual and imputed social security contributions.

TUEE0310 – INDIVIDUAL CONSUMPTION; COLLECTIVE CONSUMPTION

Expenditure incurred by general government (compensation of employees, purchases of goods and services and consumption of fixed capital) for the satisfaction of individual needs in the first case and collective needs in the second.

TUEE0320 – CURRENT TRANSFERS

Sum of current transfers to enterprises and households (including private non-profit institutions), net transfers to the rest of the world and other current transfers (e.g. net accident insurance premiums).

TUEE0330 – CURRENT TRANSFERS TO HOUSEHOLDS

Social benefits, including all current transfers to households serving to insure against certain types of risks and necessities; current transfers to private non-profit institutions include all voluntary contributions and membership fees.

TUEE0340 – CURRENT TRANSFERS TO ENTERPRISES

Production and import subsidies that general government or the institutions of the European Union pay to resident units producing goods and services.

TUEE0350 – INVESTMENT

Fixed capital formation, consisting of the value of purchases of (tangible and intangible) durable goods to be used for a period of at least one year. The data from 1980 to 1994 include net purchases of land.
