Methodological appendix

GENERAL INFORMATION

- I - Unless indicated otherwise, figures have been computed by the Bank of Italy.
- II - Symbols and Conventions:
- the phenomenon in question does not occur;
 - the phenomenon occurs but its value is not known;
 - .. the value is known but is nil or less than half the final digit shown.
- Figures in parentheses in roman type () are provisional, those in parentheses in italic (\$) are estimated.
- III - The tables are identified both by a number and by an alphanumeric code that defines the content of the table in the database in the electronic archive in which information to be released to the public is held. A similar code identifies the different aggregates shown in each table.
- IV - The methodological notes in the last part of the Supplement are marked by electronic codes that refer to the tables and, within each table, to the individual aggregates. When the methodological note refers to a particular observation, it follows the variable code associated with the reference date of the observation.

This Supplement shows amounts in both lire and euros.

For the period prior to the introduction of the single currency on 1 January 1999, the figures in euros have been obtained by converting the amounts in lire at a rate corresponding to the irrevocable exchange rate of the lira adopted from the beginning of 1999 (1,936.27 lire to the euro). For these figures the indication "values in euros" is thus to be taken as meaning "values in lire converted at the irrevocable exchange rate".

METHODOLOGICAL APPENDIX

GENERAL INDICATIONS

In this publication reference is made to three “public” aggregates: the state sector, the public sector and general government. The definition of the state sector includes: the budget and Treasury operations, the Deposits and Loans Fund, the National Road Agency (ANAS), the former State Forests, and the Southern Italy Development Agency, which was suppressed in April 1993. The public sector includes the state sector, all the other former autonomous government agencies (i.e. the state railways and monopolies, the post office and the state telephone company, which was suppressed in December 1992), social security institutions and municipal companies. The definition of general government is that used in the national accounts: central government (the state sector plus some minor bodies), local authorities and social security institutions. In accordance with the decisions taken by Eurostat, the liabilities of all three sectors include, in addition to the debts of the component bodies, the debts of external bodies whose cost is borne by the government (in particular, the liabilities of the state sector and general government include nearly all the debts of the railways). Rounding may cause the sum of the separate items to differ from the total shown. The figures for the most recent months are provisional.

NOTES TO THE TABLES

The order of the tables in the following notes is based on their code numbers. The notes to each table are set out below, together with references to the “Notes to the classification variables” section where appropriate.

TCCE0040 - STATE SECTOR BORROWING REQUIREMENT

S072090M - BUDGET DEFICIT - CHANGES

As of May 1998, following the introduction of the single tax payment form (Legislative Decree 241/1997), tax refunds and collection commissions included in the monthly series of current receipts and outlays do not necessarily refer to the same period.

S181019M - STATE SECTOR: BORROWING OF OTHER BODIES - CHANGES

The borrowing of ANAS, the former State Forests and other bodies refers to the net funds they raise in the market. For ANAS and the former State Forests the full amount is included, while for the other former autonomous government agencies only the part whose cost they bear themselves (the part whose cost is borne by the government is included in the budget and Treasury operations).

S428475M - STATE SECTOR: TAX REVENUE
