NOTICE TO READERS

The general government borrowing requirement and debt statistics published in this issue have been compiled in accordance with the Eurostat decision of 3 July 2002 on the accounting treatment of securitizations. As regards the state sector borrowing requirement, shown as a memorandum item and based on Ministry for the Economy and Finance data, for the moment the decision in question has been applied only to the securitizations of the proceeds of building sales and lotto and other lottery receipts carried out in 2001.

GENERAL INFORMATION

- I - Unless indicated otherwise, figures have been computed by the Bank of Italy.
- II - Symbols and Conventions:
 - the phenomenon in question does not occur;
 - the phenomenon occurs but its value is not known;
 - .. the value is known but is nil or less than half the final digit shown.

Figures in parentheses in roman type () are provisional, those in parentheses in italics () are estimated.
- III - The tables are identified both by a number and by an alphanumeric code that defines the content of the table in the database in the electronic archive in which information to be released to the public is held. A similar code identifies the different aggregates shown in each table.
- IV - The methodological notes in the last part of the Supplement are identified by electronic codes that refer to the tables and, within each table, to the individual aggregates. Notes that refer to a single observation are also identified by the date of that observation.

1998, has not been the same as the time they are paid. In fact, as of May 1998, the main central government taxes are paid to the Treasury (and entered in the so-called "Tax collection accounts") flow indicates an increase in the balance (the taxes received exceeded those allocated to the state budget) and vice versa. – (3) Based on Ministry of the Economy and Finance data.

METHODOLOGICAL APPENDIX

GENERAL INDICATIONS

This Supplement contains data on the formation and financing of the the general government borrowing requirement and on the general government (disaggregated into central government, local government and social security institutions) calculated in accordance with the accounting criteria established by Eurostat for securitization receipts. The part of such receipts considered as loans in accordance with the above-mentioned criteria is included in other domestic debt. The state sector borrowing requirement net of settlements of past debts and extraordinary receipts, deriving primarily from privatizations, is shown as a memorandum item. The data on state sector settlements of past debts and extraordinary receipts are used to provide an estimate of the general government borrowing requirement net of these transactions. The central government borrowing requirement includes the sector's transactions with all the other general government bodies; accordingly the borrowing requirements of local government and social security institutions refer exclusively to their funding needs net of central government transfers. The state sector and central government include basically the same entities; the differences between their borrowing requirements as reported here are due to the different accounting rules used to allocate financial liabilities among the various components of general government. On the formation side, the borrowing requirement is determined as the balance, on a cash basis, of current and capital revenue and expenditure and financial items (except for the changes in the credit balances on the Treasury's accounts with the central bank). On the financing side, the borrowing requirement is determined as the balance of the change in financial liabilities and that in the assets held by the Treasury with the central bank. Gross general government debt is given by the sector's financial liabilities at their face value at issue (the definition adopted for the Monetary Union's excessive deficit procedure). The borrowing requirement of a sector does not coincide with the change in its debt, not only because of the different accounting treatments of the assets held by the Treasury with the central bank but also because of the differences between the accounting rules used in determining the two aggregates. In particular, it should be noted that: a) government securities, except for BOTs, are included net of issue discounts and placement commissions in the borrowing requirement but at face value in the debt; and b) foreign currency securities are translated at the exchange rate obtaining at the date of issue in the borrowing requirement but at that obtaining at the end of the reference period in the debt. The stock and flow data both exclude general government liabilities taken up by other general government public bodies. Since accounts showing the formation of the general government borrowing requirement are not prepared on a monthly basis, the data shown here refer to the balance of the state budget. The balance of the other central government operations reported in the table on the formation of the general government borrowing requirement is therefore obtained as the difference between the central government borrowing requirement, determined on the financing side, and the state budget balance. On the financing side, the borrowing requirement is analyzed by financial instrument and by general government subsector. The analysis of the debt is by financial instrument, holding sector and general government subsector. In this connection it is worth noting that, since the public bodies included in central government and the state sector are basically the same, neither their borrowing requirements nor their debts differ significantly, apart from the effects of the different accounting rules used to allocate financial liabilities. The series shown here for central government debt is calculated using similar methods to those used to calculate the sector's borrowing requirement. As of issue no. 31 of 6 June 2001, the criterion used to attribute bank loans to the subsectors of general government has been changed. Such loans are now classified among the liabilities of the subsector responsible for repaying them; previously they were attributed to the subsector of the entity that received the financing.

NOTES TO THE TABLES

The order of the tables in the following notes is based on their code numbers. The notes to each table are set out below, together with references to the “Notes to the classification variables” section where appropriate.

TCCE0100 – FORMATION OF THE GENERAL GOVERNMENT BORROWING REQUIREMENT

S070207M – CENTRAL GOVERNMENT: BALANCE OF THE CHANGES IN TREASURY ACCOUNTS AND OTHER TRANSACTIONS (DEFICIT: –)

The difference between the state budget balance and the central government borrowing requirement based on financing data. The series consists primarily of the difference between payments made to the Treasury by the state budget and other entities and those made by the Treasury to non-state entities.

S072090M – STATE BUDGET: BALANCE BETWEEN REVENUE AND EXPENDITURE (DEFICIT: –)

As of May 1998, following the introduction of the unified tax payment form (Legislative Decree 241/1997) and the single mandate procedure (Ministerial Decree 183/1998), the balance is affected by leads and lags in the recording of items, especially tax refunds.

S428475M – STATE BUDGET: TAX REVENUE

The revenues shown in this table do not correspond to the taxes actually paid. The monthly flows are observed with reference to the time receipts are entered in the state budget, which, since May 1998, has not been the same as the time they are paid. In fact, following the introduction of the unified tax payment form (Legislative Decree 241/1997) and the single mandate procedure (Ministerial Decree 183/1998), as of May 1998, the main central government taxes are paid to the Treasury (and entered in the so-called “Tax collection accounts”) and only allocated to the various items of the state budget some time afterwards. The amounts are shown net of accounting transactions with the Sicily and Sardinia regions but include tax refunds and the VAT accruing to the European Union. As of 1996, receipts of petrol duty used to finance the ordinary statute regions are excluded.

S835207M – CENTRAL GOVERNMENT: GROSS BORROWING REQUIREMENT (DEFICIT: –)

Based on financing data.

S857863M – TAX COLLECTION ACCOUNTS

This item shows the balance of the changes in state taxes, Irap due to the regions and social security

contributions due to INPS paid using the single mandate procedure and recorded in “Tax collection accounts” pending allocation to the accounts of respectively the state budget, the regions and INPS. A negative value for the “Tax collection accounts” indicates that the total amount allocated during the month exceeded the taxes and contributions actually collected and vice versa.

S888011M – LOCAL GOVERNMENT: BORROWING REQUIREMENT AFTER CONSOLIDATION (DEFICIT: –)

Based on financing data. The series shows local government’s funding needs on a cash basis after deducting the sector’s own revenues and transfers from other public bodies.

Based on financing data. The series shows social security institutions funding needs on a cash basis after deducting their own revenues and transfers from other public bodies.

S916545M – PRIVATIZATION RECEIPTS AND OTHER EXTRAORDINARY STATE SECTOR REVENUE

In addition to receipts deriving from the privatization of public enterprises (net of any repurchases), the series includes some items of extraordinary revenue, such as receipts in connection with the liquidation of enterprises and the proceeds of the sale of UMTS licences.
