Supplements to the Statistical Bulletin
Monetary and Financial Indicators

The Public Finances

New series

Volume XIV Number 4 - 13 January 2004

NOTICE TO READERS

As of the June edition of the Supplement (number 31, 13 June 2003), the series showing the state sector borrowing requirement net of settlements of past debts and privatization receipts, included as a memorandum item and calculated using Ministry for the Economy and Finance data, has been replaced by the series showing the unconsolidated central government borrowing requirement net of settlements of past debts and privatization receipts, calculated using Bank of Italy data.

The state sector and central government include basically the same entities; the differences between the borrowing requirements of the two sectors are mainly due to the different accounting rules used to allocate financial liabilities among the various components of general government.

GENERAL INFORMATION

- I - Unless indicated otherwise, figures have been computed by the Bank of Italy.
- II - Symbols and Conventions:
 - the phenomenon in question does not occur;
 - the phenomenon occurs but its value is not known;
 - .. the value is known but is nil or less than half the final digit shown.

Figures in parentheses in roman type () are provisional, those in parentheses in italics () are estimated.
- III - The tables are identified both by a number and by an alphanumeric code that defines the content of the table in the database in the electronic archive in which information to be released to the public is held. A similar code identifies the different aggregates shown in each table.
- IV - The methodological notes in the last part of the Supplement are identified by electronic codes that refer to the tables and, within each table, to the individual aggregates. Notes that refer to a single observation are also identified by the date of that observation.

1998, has not been the same as the time they are paid. In fact, as of May 1998, the main central government taxes are paid to the Treasury (and entered in the so-called "Tax collection accounts") flow indicates an increase in the balance (the taxes received exceeded those allocated to the state budget) and vice versa. - (3) Amounts with reference to central government.

METHODOLOGICAL APPENDIX

GENERAL INDICATIONS

This Supplement contains data on the formation and financing of the the general government borrowing requirement and on the general government (disaggregated into central government, local government and social security institutions) calculated in accordance with the accounting criteria established by Eurostat for securitization receipts. The part of such receipts considered as loans in accordance with the above-mentioned criteria is included in other domestic debt. The unconsolidated central government borrowing requirement net of settlements of past debts and extraordinary receipts, deriving primarily from privatizations, is shown as a memorandum item. The central government borrowing requirement includes the sector's transactions with all the other general government bodies; accordingly the borrowing requirements of local government and social security institutions refer exclusively to their funding needs net of central government transfers. On the formation side, the borrowing requirement is determined as the balance, on a cash basis, of current and capital revenue and expenditure and financial items (except for the changes in the credit balances on the Treasury's accounts with the central bank). On the financing side, the borrowing requirement is determined as the balance of the change in financial liabilities and that in the assets held by the Treasury with the central bank. Gross general government debt is given by the sector's financial liabilities at their face value at issue (the definition adopted for the Monetary Union's excessive deficit procedure). The borrowing requirement of a sector does not coincide with the change in its debt, not only because of the different accounting treatments of the assets held by the Treasury with the central bank but also because of the differences between the accounting rules used in determining the two aggregates. In particular, it should be noted that: a) government securities, except for BOTs, are included net of issue discounts and placement commissions in the borrowing requirement but at face value in the debt; and b) foreign currency securities are translated at the exchange rate obtaining at the date of issue in the borrowing requirement but at that obtaining at the end of the reference period in the debt. The stock and flow data both exclude general government liabilities taken up by other general government public bodies. Since accounts showing the formation of the general government borrowing requirement are not prepared on a monthly basis, the data shown here refer to the balance of the state budget. The balance of the other central government operations reported in the table on the formation of the general government borrowing requirement is therefore obtained as the difference between the central government borrowing requirement, determined on the financing side, and the state budget balance. On the financing side, the borrowing requirement is analyzed by financial instrument and by general government subsector. The analysis of the debt is by financial instrument, holding sector and general government subsector. In this connection it is worth noting that, since the public bodies included in central government and the state sector are basically the same, neither their borrowing requirements nor their debts differ significantly, apart from the effects of the different accounting rules used to allocate financial liabilities. The series shown here for central government debt is calculated using similar methods to those used to calculate the sector's borrowing requirement. As of issue no. 31 of 6 June 2001, the criterion used to attribute bank loans to the subsectors of general government has been changed. Such loans are now classified among the liabilities of the subsector responsible for repaying them; previously they were attributed to the subsector of the entity that received the financing.

NOTES TO THE TABLES

The order of the tables in the following notes is based on their code numbers. The notes to each table are set out below, together with references to the “Notes to the classification variables” section where appropriate.

TCCE0100 – FORMATION OF THE GENERAL GOVERNMENT BORROWING REQUIREMENT

S070207M – CENTRAL GOVERNMENT: BALANCE OF THE CHANGES IN TREASURY ACCOUNTS AND OTHER TRANSACTIONS (DEFICIT: –)

The difference between the state budget balance and the central government borrowing requirement based on financing data. The series consists primarily of the difference between payments made to the Treasury by the state budget and other entities and those made by the Treasury to non-state entities.

S428475M – STATE BUDGET: TAX REVENUE

Tax revenue refers to the amounts allocated each month to the relevant chapters of the state budget. It should be noted that as of 1998, with the introduction of the unified tax payment form and the single mandate procedure, the time taxes are paid to the Treasury is not the same as the time they are allocated; in some cases amounts may be paid in one month and allocated in another. Tax revenue is not adjusted for tax refunds (included in the budget under payments) and includes VAT accruing to the European Union. The monthly figures are consistent with those published by the Ministry for the Economy and Finance in Conto riassuntivo del Tesoro, except that they are net of accounting transactions with the Sicily and Sardinia regions.

S835207M – CENTRAL GOVERNMENT: GROSS BORROWING REQUIREMENT (DEFICIT: –)

The amounts shown under this heading are the changes in the balance of taxes paid to the Treasury using the single mandate procedure and waiting to be allocated, with reference to central government taxes, Irap due to the regions and social security contributions due to INPS. A negative value indicates that the total amount allocated during the month exceeded the taxes and contributions actually paid to the Treasury and vice versa.
