## Notice to readers

The Supplement to the Statistical Bulletin - The Public finances, borrowing requirement and debt No. 10 of 14 February 2014, publishes estimates of the general government's debt and borrowing requirement for the year 2013. With respect to the data previously published, the historical series of the debt and borrowing requirement have been revised, by very small amounts, following the routine updating of the sources.

At 31 December 2013 the general government debt amounted to €2,067.5 billion. At end-2012 it had been €1,989.5 billion (127.0 per cent of GDP).

The increase in the debt recorded in 2013 (€78.0 billion) reflected the general government borrowing requirement (€75.2 billion) and the €3.3 billion increase in the Treasury's liquid assets, to €37.7 billion; issue discounts and premiums amounting to €0.5 billion helped to keep the debt down.

The borrowing requirement rose as a result of the measure regarding the payment of overdue general government commercial debts (€21.6 billion according to the latest data from the Ministry for the Economy and Finance) and the financial support Italy provided to euro-area countries (€13.0 billion; in the four years 2010-13 Italy's share of financial support to euro-area countries amounted to €55.6 billion). Privatization receipts had the opposite effect (€1.9 billion).

Disaggregated by subsector, central government consolidated debt rose by €85.7 billion, to €1,959.7 billion, while that of local government decreased by €7.7 billion, to €107.6 billion; the debt of social security institutions remained basically unchanged.

In addition to this supplement, the historical series are also available in the electronic Statistical Database (BIP on-line) in the Statistics section of the Bank of Italy's website: <http://bip.bancaditalia.it/>.

## METHODOLOGICAL APPENDIX

### GENERAL INDICATIONS

This publication contains figures on the borrowing requirement and debt of general government and its subsectors (central government, local government and social security institutions).

The borrowing requirement does not coincide with the change in the debt mainly owing to the different ways in which general government deposits held with the Bank of Italy and Treasury liquidity investments are treated; in fact the borrowing requirement is obtained as the change in the debt net of Treasury's liquid balances. The borrowing requirement and the debt also differ as a consequence of the different accounting standards applied in calculating the two aggregates. In particular: a) in the borrowing requirement issues of securities apart from BOTs are valued net of issue discounts and placement commissions, whereas they are included in the debt at nominal value; and b) in the borrowing requirement liabilities denominated in foreign currencies are converted using the exchange rate obtaining at the transaction settlement date, whereas in the debt they are converted using the end-of-period exchange rate. The formation of the central government borrowing requirement includes transactions with other general government entities; consequently, the borrowing requirements of local government and the social security institutions corresponds exclusively to their additional financing needs with respect to those met by state transfers.

General government debt consists of all the sector's financial liabilities valued at their face value at issue. It is consolidated between and within the subsectors. In other words it excludes liabilities that are assets, consisting of the same instruments, of entities belonging to general government, in line with the definition adopted for the European Economic and Monetary Union's excessive deficit procedure. The aggregate is calculated according to the methodological criteria established in European Council Regulation no. 479/2009 by summing the following categories of financial liabilities: currency and deposits; non-equity securities and loans. Loans from monetary financial institutions are allocated to the general government subsector the final borrower belongs to, i.e. that of the entity required to repay the loan and not that of the entity to which it is disbursed.

Table TCCE0100 shows the formation of the general government borrowing requirement. It is calculated as the balance on a cash basis of current and capital items and those of a financial nature (except for changes in cash balances, which in the case of general government are conventionally taken to correspond to the changes in the deposits held with the Bank of Italy). In the absence of monthly figures on the formation of the general government borrowing requirement, the data shown here are restricted to an analysis of the formation of the state budget balance. The balance of the central government's other transactions is thus obtained as the difference between the central government borrowing requirement calculated on the financing side and the balance of the state budget. As a memorandum item the table shows the unconsolidated central government borrowing requirement net of settlements of past debts and extraordinary revenue arising primarily in connection with privatizations.

Table TCCE0125 shows a breakdown of the general government borrowing requirement by instrument (the financing of the borrowing requirement).

Table TCCE0155 shows the breakdown of the general government borrowing requirement by subsector.

Table TCCE0175 shows the breakdown of general government debt by instrument along the same lines as for the borrowing requirement. Securities are divided by maturity, with an indication of the variable rate component. The share of foreign currency debt is also shown.

Table TCCE0200 shows the distribution of general government debt among the following holding sectors: Bank of Italy, other monetary financial institutions, other residents and non-residents.

Table TCCE0225 shows the distribution of general government debt among the different subsectors. Both the unconsolidated and the consolidated debt of each sector are reported.

Tables TCCE0250 and TCCE0275 cover local government debt. They analyze the debt by subsector (regions and autonomous provinces, provinces, municipalities and other entities) and instrument and by geographical area.

Table TCCE0300 shows general government debt together with the deposits this sector holds with resident monetary financial institutions and the Bank of Italy net of Treasury liquidity investments, and loans granted to countries belonging to the Monetary Union both bilaterally and via the European Financial Stability Facility. The table also shows the debt net of Treasury's liquid balances.

Table TCCE0325 shows the breakdown of general government debt by residual maturity, with an indication of the variable rate component; the average residual maturity of the debt is also shown (in years).

Tables TCCE0350 and TCCE0375 show, for general government and central government respectively, the breakdown of debt by instrument and residual maturity, currency, holders' residence.

As of September 2006 Cassa Depositi e Prestiti s.p.a. is included among Monetary Financial Institutions and the loans it disburses to general government, previously included in the series "Other transactions" and "Other liabilities" are now included in the series "MFI loans". At the same time the breakdown by holding subsector is adjusted in accordance with the new classification.

The reconstruction of general government debt since the unification of Italy was completed in 2008. The data are updated monthly on the occasion of the publication of this Supplement and are available in the Statistics section of the Bank of Italy's website

## NOTES TO THE TABLES

*The order of the tables in the following notes is based on their code numbers. The notes to each table are set out below, together with references to the "Notes to the classification variables" section where appropriate.*

### **TCCE0100 - FORMATION OF THE GENERAL GOVERNMENT BORROWING REQUIREMENT**

S070207M - CENTRAL GOVERNMENT: BALANCE OF THE CHANGES IN TREASURY ACCOUNTS AND OTHER TRANSACTIONS (DEFICIT: -)

The difference between the state budget balance and the central government borrowing requirement based on financing data. The series consists primarily of the difference between payments made to the Treasury by the state budget

and other entities and those made by the Treasury to non-state entities. As of December 2003 includes the deposits of the Cassa Depositi e Prestiti with the Treasury and the funds raised by the Post Office assigned to the Treasury.

S428475M - STATE BUDGET: TAX REVENUE

Tax revenue refers to the amounts allocated each month to the relevant chapters of the state budget. It should be noted that as of 1998, with the introduction of the unified tax payment form and the single mandate procedure, the time

taxes are paid to the Treasury is not the same as the time they are allocated; in some cases amounts may be paid in one month and allocated in another. Tax revenue is not adjusted for tax refunds (included in the budget under payments) and includes VAT accruing to the European Union. The monthly figures are consistent with those published by the Ministry for the Economy and Finance in Conto riassuntivo del Tesoro, except that they are net of accounting transactions with the following regions: Sicily, Sardinia and, since 2009, Friuli Venezia Giulia.

**S835207M - CENTRAL GOVERNMENT: GROSS BORROWING REQUIREMENT (DEFICIT: -)**

Based on financing data. The series includes liabilities connected with loans granted to countries belonging to the Economic and Monetary Union via the European Financial Stability Facility.

The amounts shown under this heading are the changes in the balance of taxes paid to the Treasury using the single mandate procedure and waiting to be allocated, with reference to central government taxes, Irap due to the regions and social security contributions due to INPS. A negative value indicates that the total amount allocated during the month exceeded the taxes and contributions actually paid to the Treasury and vice versa.

**S888011M - LOCAL GOVERNMENT: ADDITIONAL GROSS BORROWING REQUIREMENT AFTER CONSOLIDATION (DEFICIT: -)**

Based on financing data. The series shows local government's funding needs on a cash basis after deducting the sector's own revenues and transfers from other public bodies.
