(1) Values are calculated by relating the net flow of interest to the respective balance sheet item. The ratio is not shown for derivatives as the flow is not broken down into amounts

Statistical Appendix BANCA D'ITALIA

<sup>(1)</sup> Values are calculated by relating the net flow of interest to the respective balance sheet item. The ratio is not shown for derivatives as the flow is not broken down into amounts related to assets and liabilities. For the items Other assets and Other liabilities, the denominator is the difference between the value of the total assets or liabilities and the amounts that relates to the remaining items. – (2) The value of this item is not reported due to a very limited number of intermediaries. – (3) They do not include loans and advances which are balances receivable on demand from central banks or credit institutions, which are shown under the sub-items central bank holdings and overnight deposits with other financial institutions listed under Other assets.
