Appendix B: Statistical Tables ..... 18
Appendix C: Questionnaires ..... 32

This report was written by a committee headed by Andrea Alivernini and composed by Marco Bottone, Tatiana Cesaroni, Caterina Di Benedetto, Michele Loberto, Elena Mattevi e Giuseppina Papadia. The Bank's branches assisted in the survey and were responsible for the collection of the data.

The data were gathered exclusively for economic analysis and will be released only in aggregate form. We thank all the firms that participated in the survey.

## BUSINESS OUTLOOK SURVEY OF INDUSTRIAL AND SERVICE FIRMS

## MAIN FINDINGS - 2015

The survey was conducted in September and October 2015 on a sample of 4,322 industrial (excluding construction) and service firms with 20 or more workers and 592 construction firms with 10 or more workers. The main findings were illustrated in the Bank of Italy's Economic Bulletin, published on 16 October 2015.

## INDUSTRY EXCLUDING CONSTRUCTION AND SERVICES

- The share of firms reporting an expansion in their sales turnover in the first nine months of the year rose further to 42.3 per cent (compared with 33.2 per cent in the previous year). Less than 30 per cent continued to report a contraction. The outlook is positive for both the domestic market and the main foreign outlet markets, with the exception of emerging markets other than China.
- Positive signals are expected to persist in the coming months: the share of firms anticipating an increase in their orders between the autumn and the next spring rose to almost 40 per cent, up by 10 percentage points compared with one year earlier.
- Firms' self-assessments suggest that the direct and indirect effects of the slowdown in the Chinese economy have been moderate up to now. The depreciation of the euro would also appear to have had negligible effects on the vast majority of the firms surveyed although, among those with a greater share of sales turnover generated on foreign markets, the share reporting positive effects is larger than that reporting negative effects.
- Two thirds of firms confirmed their investment plans, which were based on expectations of a pick-up in investment; for the remaining firms, the proportion reporting a review upwards and that reporting a review downwards were almost equal.
- The pick-up in investment is expected to continue next year: the balance between expectations of an improvement versus those of a deterioration increased by almost 10 percentage points compared with the previous year, reaching 14 per cent.
- Labour demand returned to growth: in 2015 the balance between firms creating more employment and firms reducing it swung back to positive territory at about 8 percentage points, after being negative at 10 percentage points on average since the beginning of the financial crisis.
- A quarter of firms report improved borrowing conditions in the first part of the year, owing mainly to a decrease in the interest rates applied, the possibility of accessing new credit, and faster processing times. The picture is expected to remain positive in the second part of the year.

## CONSTRUCTION AND PUBLIC WORKS

- The balance of firms' assessments concerning the trend of overall production for 2015 is slightly positive for the first time since 2007, although the outlook is still negative for public works.
- Expectations for the demand for labour are still negative: the share of firms forecasting a drop is much larger, by 13 percentage points, than that anticipating a rise.

## SURVEY OF INDUSTRIAL AND SERVICE FIRMS

## 1. Non-construction industrial firms and service firms

## Demand, expectations and economic performance

The interviews conducted on firms in industry excluding construction and services for the Bank of Italy's 23 rd survey point to a gradual consolidation of the positive signals recorded in the first part of the year. ${ }^{1}$

The share of firms reporting an expansion in their sales turnover in the first nine months of the year rose significantly, while the share reporting a contraction dropped accordingly. The cyclical upturn is confirmed by an increase in the volume of orders throughout the summer and by a positive outlook for the next six months. The share of firms expecting a rise in orders in the next 6 months grew by more than 10 percentage points compared with the previous year, reaching almost 40 per cent; this was matched by a fall in negative expectations, which dropped to 13 per cent (Figure 1). The improvement in firms' assessments concerning current and future demand was widespread and spanned all firm size groups and all the main sectors except textiles and clothing. Even a vast majority of firms exporting to China, which account for only a quarter of the total, believe that the slowdown in the Chinese economy did not have meaningful effects on their business (Figure 2).

The strong depreciation of the euro against the dollar and other currencies observed between mid2014 and last summer had a negligible effect on firms operating on the domestic market. Exporting firms report a similar view, although the proportion decreases as the share of sales turnover realized on foreign markets increases. When the share of turnover realized on foreign markets becomes greater than two thirds, the balance of responses reporting a favourable versus a negative impact becomes strongly positive (Figure 3).

Export-oriented industrial firms report demand expectations which are overall more positive than those, still positive, revealed by non-exporting firms with similar characteristics. The outlook for next year is favourable for all the main export markets (Figure 4).

In keeping with the generally positive expectations for actual and expected sales, firms in both industry and in services forecast a significant improvement of their economic performance. The share of firms expecting to post a profit at the end of the year is over 70 per cent, while the share of those expecting a loss is around 15 per cent. These figures are consistent with those observed before the onset of the financial crisis. Compared with last year, the balance between the two shares went up by 12 percentage points.

Between 2012 and 2015 more than half of the firms increased their net equity compared with 2011 . The figure reaches two thirds if only firms with 500 or more workers are considered. The tax allowance in support of economic growth (known as 'ACE', Aiuto alla Crescita Economica) that was part of the end-2011 'Save Italy' decree had a significant impact on almost one tenth of the firms that reported an increase in their equity.

## Investment and employment

A more favourable outlook for demand had a positive effect on investment and employment decisions.
More than 60 per cent of firms expect their investment expenditure for the current year to match the amount planned, for which a pick-up was forecast. ${ }^{2}$ According to firms' plans, investment would gain momentum over the course of 2016: the balance between firms expecting a further increase in expenditure and those anticipating a decrease rose by almost 10 percentage points compared with the previous year, reaching 14 percentage points. The positive balance improved considerably both for firms that reviewed their investment plans downwards and for those that reviewed them upwards.

The pick-up in investment was also spurred by the significant improvement in borrowing conditions reported by firms for the first half of the year: two thirds reported stable conditions, a share unchanged from the previous year; the proportion reporting a deterioration halved, going from 15 per cent to 8 per cent, while the

[^0]percentage stating an improvement rose from 20 per cent to 26 per cent. The improvement is mainly due to the trend in the interest rates applied, access to new loans and faster processing times. In their self-assessment, firms believe the improvement in borrowing conditions will continue in the second part of the year.

One third of firms who have trade receivables vis-à-vis the general government report a decrease in the payment times of invoices issued in the current year compared with those issued in the same period of 2014. Some 5.4 per cent of firms stated the reduction was significant.

Demand for labour returned to growth: in 2015 the balance between firms creating more jobs and firms reducing them bounced back to positive territory at about 8 percentage points, after being negative ( -10 percentage points on average) for the last six years. The growth in employment, which benefited almost all sectors (with the exception of textiles, clothing and footwear, and logistics) and all size groups, went hand in hand with a growing amount of cases where salary increases were not mandated by the relevant national labour contract and were not usually part of a company or territorial deal. This involved some 42 per cent of firms' employees, almost 9 percentage points more than in the two previous years, and could trigger an increase in average wages: the share of workers whose salaries will go up between 1 and 2 per cent grew from 32 per cent to 39 per cent, while the share of those whose salaries will grow by less than 1 per cent declined.

Apart from the effects of the cyclical upturn, the demand for labour appears to have benefited from the new legislation on individual dismissals on economic grounds (the 'Jobs Act'). Some 17 per cent of firms observed a simplification of the procedure to dismiss an employee compared with the situation that prevailed in 2013, and almost 14 per cent of firms believe it to be an effect of the new legislation, a figure which is double that found by the Bank of Italy in a survey conducted as part of the ESCB project to collect firms' assessments of legal and regulatory changes in the period 2010-13 ${ }^{3}$ (Figure 5). The vast majority of firms, however, report little or no change.

## 2. Construction firms ${ }^{4}$

## Output, economic performance and employment

Construction firms, like industrial and service firms, reported expectations for the current year that are markedly more positive compared with the results recorded in previous years.

Their assessments for 2015 are in line with the positive trend displayed since 2013: the balance between the share of firms reporting an expansion of their activity and those reporting a contraction increased to 2.6 percentage points, up from -12.2 in 2014 (Figure 6). The forecast for 2016 is also positive: 21 percentage points.

In public works, where approximately three quarters of construction firms are active, the outlook is improving but the balance is still negative: -2.7 percentage points. As to the expectations for 2016, the balance is positive at 8.3 percentage points, continuing the improvement ongoing since 2011.

The effects of the new legislation (Decree Law 133/2014, commonly known as the 'Sblocca Italia' Decree) on the construction sector were perceived as positive by less than 10 per cent of the firms active in residential and non-residential housing and by some 15 per cent of those active in public works.

The positive trend of output reflected favourably on the annual result, which this year is expected to be positive for over 60 per cent of firms. This is especially true for medium-large ones and those operating in the South and Islands.

Notwithstanding the encouraging trend in demand and in annual results, the outlook for employment in construction remains bleak. The negative balance between the share of firms expecting an increase in the number of employees and the share of those expecting a decrease remained at 13 per cent, unchanged from 2014.

## Financial aspects

The overall borrowing terms for construction firms in the first half of 2015 continued to improve. The balance between firms pointing to an improvement and those pointing to a worsening virtually zeroed out after being extremely negative for the previous four years with values ranging from -20 to -50 percentage points. The improvement is expected to continue in the second part of the year.

The overall demand for bank loans by construction firms is expected to slow in 2015, with a positive but declining balance between firms anticipating an increase and those anticipating a decrease. As regards invoices issued by general government since the beginning of 2015, slightly over one third of firms reported a reduction in the payment times of trade receivables.

In the period 2012-15 slightly less than 40 per cent of firms increased their net equity. Of these, only two fifths attributed their decision to the 'ACE' tax allowance and stated that this had a limited impact on their decision.

## Appendix A:

Methodological Notes

## METHODOLOGICAL NOTES

## A1. The sample

Since 1993 the Bank of Italy has conducted a business outlook survey of firms, between September and October ${ }^{5}$.

The present survey covers 4,322 firms with 20 and more workers, of which 3,088 in industry excluding construction and 1,234 non-financial private service firms (including firms in the wholesale and retail trade, hotels and restaurants, transport and communication companies, real-estate activities, IT and other private services). Since 2007 a parallel survey has been conducted using a simplified questionnaire on a sample of construction firms with 10 and more workers, totaling 592 this year. Most of the firms contacted ${ }^{6}$ were the same as those interviewed in the early months of 2015 for the 2014 Survey of Industrial and Service Firms. The sampling design is the same in both surveys ${ }^{7}$. Table A1 contains a breakdown of the sample by number of workers, branch of activity and geographical area.

## A2. Data collection

The data were collected by the branches of the Bank of Italy between 22 September and 23 October 2015 using the questionnaires contained in Appendix C. ${ }^{8}$ The firms were asked to provide mainly qualitative information on the performance of the main economic variables, and the value ranges of numbers appearing in the questionnaire are purely indicative. The questionnaire dedicated to construction firms includes questions on output, workforce and profit/loss for the year. All questions appearing for the first time were tested beforehand.

## A3. Estimators

The aggregates are estimated using a weighting coefficient for each sampling unit that takes account, in respect of marginal distributions by geographical area, number of workers and branch of activity, of the ratio between the number of workers of the firms surveyed and the number of workers of firms in the reference population. ${ }^{9}$ By using the number of workers as a scale variable, this method of weighting can provide information on macroeconomic results.

The standard errors of the percentage estimates, in relation to the national total, do not exceed 0.7 per cent ( 2.0 per cent for construction firms), that is, the maximum confidence intervals (at 95 per cent) are 1.4 percentage points ( 4.0 points for the construction industry). In the case of narrower domains (such as the geographical area, number of workers or branch of activity), the standard errors are greater as the statistics refer to a smaller sample. Table 1 contains the estimates of the standard errors for the whole sample and for some classification variables. The estimates also take account of the necessary finite population correction.

[^1]
## A4. The BIRD system for the distance processing of the survey data

From March 2008 the Bank of Italy has made a system available for the remote processing of data collected in its surveys on firms (BIRD - Bank of Italy Remote access to micro Data) ${ }^{10}$. The system allows researchers and economists to carry out computations using the data collected with the surveys on non-construction and service firms from 1984 onwards (for the Business Outlook Survey from 1993 onwards) in full compliance with the confidentiality of the individual data. Researchers can carry out their statistical and econometric analyses without having direct access to the individual micro data by submitting their calculations by e-mail and receiving the output in the same way. Both the input and the output of calculations are subject to automatic and manual controls on their content. Access to the system requires registration and assignment of a username.

## Appendix C:

Questionnaires

## BANCA D'ITALIA

## EUROSISTEMA

## 23rd BUSI NESS OUTLOOK SURVEY - 2015 NON-CONSTRUCTI ON INDUSTRI AL FIRMS AND SERVICE FIRMS

Notice. - The purpose of this survey is to collect information on the main economic and financial variables in the industrial sector. Your co-operation is important but not compulsory. The information provided will only be used for research purposes. Firms taking part to the survey will provide a valuable contribution to the analysis of the Italian economy. The data will be handled in order to ensure data safety and confidentiality.

GENERAL I NFORMATI ON

$\qquad$

## Legal status

Legend: $1=$ SRL; $2=S P A ; 3=S A P A ; 4=$ Soc. Coop.; $5=S A S ; 6=S N C ; 7=$ Altro.

Istat - Ateco2007 (first 5 figures)
埥 Istat (Italian National Statistical Institute) economic activity: see ISTAT. Classificazione delle attività economiche. Metodi e norme 2007.

## Average payroll employment in 2014

或 Does NOT include temporary workers and workers on collaboration contracts (co.co.co.). Partners and owners should be included if they work for the firm. The total includes workers on fixed-term contracts and redundant workers receiving Wage Supplementation Fund benefits. The information can be obtained as the mean of the average monthly workforce. In the case of temporary and seasonal workers and generally anyone working for only part of the year, the number of workers must be multiplied by the fraction of the year during which they have worked. Workers receiving Wage Supplementation Fund benefits and part-time workers should be regarded as working for the whole of the year.

Share of exports in total sales revenue for 2015 $\qquad$
$\square$
1 zero
2 less than 1/3
3 between $1 / 3$ and 2/3
more than $2 / 3$
9 do not know, no answer
For service firms, insert the share of sales revenue arising from non-residents in Italy

MAI $N$ economic purpose of goods and services produced: $\qquad$
$\square$
NON-CONSTRUCTION-INDUSTRY FIRMS
1 capital goods (used in production processes for longer than one year)
2 intermediate goods (part of other goods/services)
3 consumer goods (directly for consumption)
SERVICE FIRMS
4 business services
5 household services
6 general government services

## I NVESTMENT

1 Compared with the LEVEL PLANNED AT THE END OF 2014, nominal expenditure on (tangible and intangible) fixed investment in the current year will be: $\qquad$
1 much lower (by more than 10\%)
2 a little lower (between $3.1 \%$ and $10 \%$ )
3 practically the same (between -3\% and $3 \%$ ) question 3
4 a little higher (between $3.1 \%$ and $10 \%$ )
5 much higher (by more than 10\%)
9 do not know, no answer question 3
屝 The responses "much higher" and "much lower" also apply when, in the two periods compared, investments are zero in one year and higher than zero in the other.
(Ask this question ONLY IF actual expenditure on investment is likely to differ from that planned)

## 2 The gap is MAI NLY due to:

1 financial factors
2 unexpected changes in demand
3 changes in the level of uncertainty due to economic or political factors
4 changes in purchase prices
5 organizational or technical factors
6 red tape
7 changes to the tax system or to incentives
9 do not know, no answer
3 How does planned nominal expenditure on fixed investment in 2016 compare with that in 2015
1 much lower (by more than 10\%)
2 slightly lower (between 3.1\% and 10\%)
3 stable (between -3\% and $3 \%$ )
4 slightly higher (between $3.1 \%$ and $10 \%$ )
5 much higher (by more than 10\%)
9 do not know, no answer
The responses "much higher" and "much lower" also apply when, in the two periods compared, investments are zero in one year and higher than zero in the other.

4 What factors are affecting your investment plans for 2016, and in what direction?

A Positive (indicate up to two in order of importance) $\qquad$
B Negative (indicate up to two in order of importance) $\qquad$

Legend: $1=a$ change in borrowing conditions; $2=a n$ expected change in demand; $3=$ a change in the uncertainty attributable to economic or political factors; $4=$ an expected change in buying prices; $5=$ organization and technical factors; $6=$ bureaucracy; $7=$ changes to the tax and incentives system; $9=$ don't know, don't wish to answer.

## FIRM'S FUNDI NG

## 5 Considering just bank loans, indicate the trend of your demand excluding seasonal fluctuations ${ }^{*)}$ :

(*) Consider the amount desired, independently of how much actually granted by banks.
Legend: 1 =large contraction; 2=moderate contraction; 3=basically no change; 4=moderate increase; 5=large increase; $8=$ not applicable; $9=$ do not know, no answer.

Only if your loan demand changed (answer 1, 2, 4 or 5 to the above)
6 What are the main factors determining changes in your demand for bank loans? (for each half-year, indicate at most two factors as most important)

A - change in funding requirement for fixed investment
B - change in funding requirement for stocks and working capital
C - change in funding requirement for debt restructuring
D - change in self-financing capacity
E - change in other forms of borrowing (non-bank credit, bond issues, etc.)

F - other factors $\qquad$
 (specify) $\qquad$
$\qquad$
7 How did the firm's overall borrowing conditions change and how will you expect them to change?

A general conditions
B specifical aspects:
B. 1 interest rates
B. 2 other costs (banking fees, etc....)
B. 3 amount of collateral required
B. 4 access to new financing
B. 5 time necessary to obtain new funds
B. 6 complexity of information needed to obtain new funds
$\qquad$
$\qquad$
B. 7 requests of reimbursing previously granted loans beforehand

Legend: $1=$ they became worse; $2=$ no change; $3=$ they became better; $8=$ not applicable; $9=$ do not know, no answer.

## WORKFORCE, WAGE SUPPLEMENTATI ON, WAGES AND NATIONAL WORK CONTRACT

8 Would you be able to indicate whether the actions listed below have become more difficult now compared with 2013 (please provide an answer for each point)

A Individual dismissal on economic grounds $\qquad$
$\square$

C Salary cuts $\qquad$
$\square$
Legend: $1=a$ lot more difficult; $2=$ more difficult; $3=$ virtually unchanged; $4=$ easier; $5=$ a lot easier.
(Please answer question No. 9 ONLY IF your answer to the previous question No. 8 was 1, 2, 4 or 5)
9 Regarding the actions listed in the previous question for which an answer pointing to a change was given, what are in your opinion the underlying factors? (please provide an answer for each point)

A Individual dismissal on economic grounds. $\qquad$
B Dismissal on disciplinary grounds
C Salary cuts
Legend: $1=$ structural changes in the labour market; $2=$ changes in the way laws and regulations are interpreted; $3=$ changes in the behaviour of trade unions; $4=$ changes in the individual behaviour of workers.

10 How will the average size of the workforce in 2015 compare with that in 2014:

## much smaller (more than 5\%)

a little smaller (between $1.1 \%$ and $5 \%$ )
practically the same (between $-1 \%$ and $1 \%$ )
a little larger (between $1.1 \%$ and 5\%)
much larger (more than 5\%)
do not know, no answer

11 In 2015 did your firm use any form of wage supplementation or have recourse to the layoff procedure? (give an answer for each item)
A wage supplementation (ordinary, extraordinary or under a waiver, including solidarity contracts) ....

Legend: $1=$ no; $2=y e s ; 8=$ not applicable(e.g. firm not eligible to apply; $9=$ don't know, don't wish to answer.

1. Ordinary wage supplementation is for permanent employment blue- and white-collar workers and technicians of industrial firms in general in the event of suspension or reduction of production as a result of company situations arising from:

- temporary events not attributable to the entrepreneur or the workers;
- temporary market conditions.

Wage supplementation can be granted for up to 13 consecutive weeks, renewable for another 13 weeks. In a period of two years no more than 52 weeks of ordinary wage supplementation may be authorized.
2. Special wage supplementation is for blue- and white-collar workers and technicians in the event of restructurings, reorganizations, conversions and company crises and in the event of bankruptcy or compulsory liquidation.
3. Ordinary and special wage supplementation under a waiver. Recent Government measures have extended the scope for wage supplementation under a waiver of the provisions of Point 1 , thus permitting applications by firms:

- that are not normally eligible for ordinary wage supplementation;
- that are eligible for ordinary wage supplementation but have reached the relevant time limits;
- for workers other than those on permanent employment contracts, such as apprentices and temporary employees.

Similarly, special wage supplementation under a waiver can be used for firms not eligible for special wage supplementation (see Point 2) and for firms which are eligible but which have reached the relevant time limits ( 3 years in the last 5 years).
4. Layoff procedure. It can be asked by firms with 15 employees or more, provided they: - are eligible to special wage supplementation under a waiver;

- use collective redundancies after workforce reduction, change or closing of their activities.

The employees eligible are those that are either on permanent contracts since a minimum of one year, or have been already dismissed and enrolled on special lists prepared by the Labor General Directorate, based on lists of employees provided by the companies in crisis.

12 Have you granted any wage increases in 2014 NOT provided for by the NATI ONAL LABOUR CONTRACT or do you intend to do so before the end of the year?
1 no question 15
2 Yes
9 do not know, no answer
(Answer the following question ONLY IF you answered YES to question 12)

13 Considering ONLY THESE I NCREASES, what increase will they produce in average earnings ( of all the firm's payroll workers) in 2015?

1 less than $1 \%$
2 between 1\% and 2\%
3 between $2.1 \%$ and $3 \%$
4 more than 3\%
9 do not know, no answer
(Answer the following question ONLY IF you answered YES to question 12)

14 The wage increases provided were: $\qquad$
$\square$
1 granted under company or territorial level wage agreements
2 granted in the absence of company or territorial level wage agreements
9 don't know, don't wish to answer

## RESULT FOR THE YEAR, ORDERS, SALES REVENUE AND PRODUCTION

15 What AFTER-TAX result do you expect for the current year? $\qquad$
$\square$
1 large loss
2 modest loss
3 breakeven
4 modest profit
5 large profit
9 do not know, no answer

Turning now to sales revenue and orders for the firm's products/ services
(give an answer for all the three items below)

16 Sales revenue: what change is expected in Q1-Q3 2015 compared with Q1-Q3 2014?

17 Orders/ sales of the firm's products/services: on a seasonally adjusted basis their current trend compared with the end of June has been:

18 ... and in 6 months, compared with now, will be:

Legend: 1=much lower (less than -4 \%); 2=slightly lower (between -1.6\% and -4\%); 3=stable (between -1.5\% and $1.5 \%$ ); $4=$ slightly higher (between $1.6 \%$ and $4 \%$ ); $5=$ much higher (more than $4 \%$ ); 8=not applicable (e.g. non-exporting firms for B , non-exporting in that specific market for C ); $9=$ do not know, no answer.

For questions 17 and 18, consider orders for industrial firms and sales for service firms.
(For exporting firms only)

## 19 Sales abroad and currency used in price lists

 (please provide a separate answer for each market)A Euro area (excluding Italy)
B Rest of Europe (excluding Russia)
C USA
D China
E Russia, Brazil and India
F Rest of the world

| How do you expect your sales <br> in the various outlet markets <br> to change? | C What currency <br> do you normally <br> use in price lists <br> for the following <br> outlet markets in <br> 2015? (2) |  |
| :---: | :---: | :---: |
| A in 2015 with <br> respect to <br> $2014{ }^{(1)}$ | B in 2016 with <br> respect to <br> $2015^{(1)}$ |  |

Legend: (1) $1=$ large contraction; $2=$ modest contraction; 3=stable; 4= modest expansion; 5=large expansion; $8=$ firm does not sell in this market; $9=$ don't know, don't wish to answer.
(2) $1=$ euro; $2=$ US dollar; $3=$ local currency, if different from euro or US dollar; $4=0$ ther currency, different from euro, US dollar or local currency; $8=$ firm does not sell in this market; $9=$ don't know, don't wish to answer.

> To answer this set of questions, refer to the lists of countries at the bottom of the questionnaire.

20 Starting from the second half of 2014 the euro depreciated strongly against the US dollar and other currencies. Has this had an impact on your business over the last $\mathbf{1 2}$ months?

| 1 | No |
| :--- | :--- |
| 2 | Yes, negative |
| 3 | Yes, positive |
| 9 | Don't know, don't wish to answer 22 |

(Only for firms who answered 'yes, a positive one' to the previous question)
21 How did the euro depreciation have a positive impact on your business?
A Increase in sales volume

Legend: $1=$ very significant; $2=$ not very significant; $3=$ not at all significant; $9=$ don't know, don't wish to answer.
22 (Only for non-construction-industry firms)
Considering the firm's total production, what do you expect in Q4 of 2015 compared with Q3 of the same year?

1 much lower (more than 4\%)
2 slightly lower (between $1.6 \%$ and $4 \%$ )
3 stable (between $-1.5 \%$ and $1.5 \%$ )
4 slightly higher (between $1.6 \%$ and $4 \%$ )
5 much higher (more than 4\%)
9 do not know, no answer

## Notice that:

1) the answer should refer to the production by Italian plants;
2) the answer should refer to the production in volume terms, not in monetary terms;
3) the answer should not consider seasonal factors which naturally determine production variations between two adjacent quarters.

23 Over the course of 2015, compared with the previous three years, did your share of purchases from foreign suppliers increase relative to that of domestic suppliers
1 No
question 26
2 Yes
3 I have not made purchases from foreign suppliers in the last four years question 26
9 Don't know, don't wish to answer
question 26
(Please answer ONLY IF you answered YES to the previous question)

## 24 What is the main reason for this change in the shares?

1 The goods and/or services purchased from foreign suppliers are of better quality
2 The goods and/or services purchased from foreign suppliers are cheaper
3 The goods and/or services purchased from foreign suppliers are not available on the domestic market
4 The goods and/or services purchased from foreign suppliers are delivered more quickly and reliably
9 Don't know, don't wish to answer
(Please answer ONLY IF you answered YES to the previous question No. 23)
25 Do you believe this change in the shares to be: $\qquad$
$\qquad$
$\square$
1 Temporary
2 Long-term
9 Don't know, don't wish to answer

26 What do you think is the impact on your business of the recent slowdown in the Chinese economy?

1 Very negative
2 Fairly negative
3 Negligible question 28
4 Fairly positive
5 Very positive
9 Don't know, don't wish to answer question 28
(Please answer the following question ONLY IF you answered 1, 2, 4 or 5 to the previous question)

27 Through which channels are you feeling these effects the most?
(please indicate up to two in order of importance)

Direct impact on your sales in China
Indirect impact through sales on other outlet markets
Effects stemming from the increased uncertainty concerning world growth
Effect connected to the prices of commodities and raw materials
Other (please specify) $\qquad$

## GENERAL GOVERNMENT PAYMENTS

observe an acceleration in payments compared with the same period of $\mathbf{2 0 1 4}$ ? $\qquad$
1 No
2 Yes, slight
3 Yes, significant
8 Not applicable
9 Don't know, don't wish to answer

## TAX ALLOWANCE FOR CORPORATE EQUITY AND SHAREHOLDERS' EQUITY

29 Compared with 2011, in the years 2012-15, did you or will you increase the company's shareholders' equity (e.g. by issuing shares or self-financing)?

1 No question 31
2 Yes
9 Don't know, don't wish to answer question 31
(Answer the following question ONLY IF you answered YES to the previous question)
30 To what extent do you believe that the tax allowance in support of economic growth (known as 'ACE', Aiuto alla Crescita Economica) that was part of the end-2011 'Save Italy' decree influenced or will influence the decision to increase your company's shareholders' equity?

Legend: $1=$ not at all significantly; $2=$ a little significantly; $3=$ fairly significantly; $4=$ very significantly; $9=d o n ' t$ know, don't wish to answer.

䨝 Article 1 of Decree Law 201/2011 ('Save Italy' decree, converted, with amendments, into Law 214/2011) provided for the deductibility of the notional yield of new equity as part of the tax allowance in support of economic growth ('ACE'), with the additional goal of strengthening the asset structure of firms. For private and public companies and public corporations and for other for-profit enterprises, the deduction applies to increases to equity in excess of the amount as of 31 December 2010; for partnerships and sole proprietorships subject to standard accounting practices, the deduction applies to all the equity that appears on the balance sheet. The notional yield is calculated applying a yearly interest rate equal to 3 per cent for 2011-13, to 4 per cent for 2014, to 4.5 per cent for 2015 and to 4.75 per cent for 2016.

31 How do you assess the effort required to fill in this questionnaire? $\qquad$
$\square$
1 modest
2 medium
3 high
4 excessive

## 23rd BUSI NESS OUTLOOK SURVEY - 2015 <br> CONSTRUCTION FIRMS

Note - The purpose of this survey is to collect information on the main economic and financial variables in the construction sector. Your co-operation is important but not compulsory. The information provided will only be used for research purposes. Firms taking part to the survey will provide a valuable contribution to the analysis of the Italian economy. The data will be handled in order to ensure data safety and confidentiality.

GENERAL I NFORMATI ON

Tax code

Name of firm

## Legal status

Legend: $1=$ SRL; $2=S P A ; 3=S A P A ; 4=S o c . C o o p . ; 5=S A S ; 6=S N C ; 7=A l t r o$.

I stat - Ateco2007 (first 5 figures)

## Average payroll employment in 2014

Does NOT include temporary workers and workers on collaboration contracts (co.co.co.). Partners and owners should be included if they work for the firm. The total includes workers on fixed-term contracts and redundant workers receiving Wage Supplementation Fund benefits. The information can be obtained as the mean of the average monthly workforce. In the case of temporary and seasonal workers and generally anyone working for only part of the year, the number of workers must be multiplied by the fraction of the year during which they have worked. Workers receiving Wage Supplementation Fund benefits and part-time workers should be regarded as working for the whole of the year.

Main branch of activity in construction 2015: $\qquad$
$\square$
1 private residential construction
2 private non-residential construction
3 public works
Public works are projects financed by the State or by local authorities (regions, provinces, etc.) and assigned by tender, or works of public interest even if privately financed (e.g. roads, hospitals or schools built with private funds). Private non-residential construction work includes hotels and buildings (factories, offices, commercial buildings, warehouses, garages, etc.).

## WORKFORCE

1 The average number of payroll workers in 2015 compared with that in 2014, will be:

| Total | Of which, open- <br> ended contracts |
| :---: | :---: |
|  |  |

[^3]
## RESULT FOR THE YEAR

## 2 What AFTER-TAX result do you expect for the current year?

$\qquad$
1 large loss
2 modest loss
breakeven
4 modest profit
5 large profit
9 do not know, no answer

## PRODUCTI ON

3 Value of the firm's production (please provide an answer for each item)

A change expected between H 2 and H 12015.

|  | Of which: in public works |  | Of which: housing |  |
| :---: | :---: | :--- | :--- | :--- |
| A total <br> production | B is the firm <br> active in this <br> sector? | C production | $\mathbf{D}$ is the firm <br> active in this <br> sector? | E production |

B change between 2015 and 2014 $\qquad$

C change expected between 2016 and 2015 ..

Legend: $1=$ large decrease (more than 4\%); $2=$ modest decrease (between $1.6 \%$ and $4 \%$ ); $3=$ stable (between $-1.5 \%$ and $1.5 \%$ ); $4=$ modest increase (between $1.6 \%$ and $4 \%$ ); $5=$ large increase (more than $4 \%$ ); $9=$ do not know, no answer.

The responses "large decrease" and "large increase" also apply when, in the two periods compared, the value of production is zero in one year and higher than zero in the other.

## DECREE LAW 133/ 2014 ('SBLOCCA ITALI A’ DECREE )

4 What was the impact of Decree Law 133/ 2014 (‘Sblocca Italia’ Decree) on your business in 2015 concerning the following areas of activity?
A Residential housing $\qquad$

B Non-residential housing
C Public works $\qquad$

$\square$
Legend: $1=$ very negative; $2=$ negative; $3=i$ negligible; $4=$ positive; $5=$ very positive; $8=$ not applicable; $9=$ don't know, don't wish to answer.

The decree law deals with the following: measures to encourage the resumption of work on construction sites (e.g. increasing funding for public works; appointing special administrators; providing financial resources to enable local governments to make overdue payments to vendors); measures to roll back the bureaucracy concerning the prevention of seismic and hydrogeological hazards and urgent maintenance works on school buildings (carried out in derogation of the provisions of the Public Contracts law); tax incentives for public works where private capital is involved (e.g. tax credit on IRES corporate income tax, and IRAP regional tax on productive activity); rolling back bureaucracy and tax incentives to improve highways, telecommunications and energy infrastructure.

## FI RM'S FUNDI NG

5 Considering just bank loans, indicate the trend of your demand excluding seasonal fluctuations ${ }^{*)}$ :

(*) Consider the amount desired, independently of how much actually granted by banks.
Legend: $1=$ large contraction; $2=$ moderate contraction; $3=$ basically no change; $4=$ moderate increase; $5=$ large increase; $8=$ not applicable; $9=$ do not know, no answer.

6 How did the firm's overall borrowing conditions change and how will you expect them to change?

A general conditions
B specific aspects:
B. 1 interest rates
B. 2 other costs (banking fees, etc....)
B. 3 amount of collateral required
B. 4 access to new financing
B. 5 time necessary to obtain new funds
B. 6 complexity of information needed to obtain new funds $\qquad$

| A $2015 \mathrm{H1}$ on <br> 2014 H 2 | B $2015 \mathrm{H2}$ on <br> $2015 \mathrm{H1}$ <br> (forecast) |
| :---: | :---: |
| $\square$ |  |
| $\square$ |  |
| $\square$ |  |

Legend: 1 =they became worse; $2=$ no change; $3=$ they became better; $9=$ do not know, no answer; $8=$ not applicable.

## GENERAL GOVERNMENT PAYMENTS

A list of the entities that are part of the General Government sector (Sector S13) is prepared by Istat drawing on the European System of National and Regional Accounts (ESA 2010) and is published in the Official Journal of the Italian Republic.
It is important to note that the General Government sector does not include companies partially owned by government entities if these sell most of their goods and services at market prices and their revenues cover at least 50 per cent of overheads. Mere control by a government entity does not automatically include a firm in the General Government sector.

7 As regards trade receivables vis-à-vis general government bodies from January 2015 to now, did you observe an acceleration in payments compared with the same period of 2014 ?

1 No
2 Yes, slight
3 Yes, significant
8 Not applicable
9 Don't know, don't wish to answer

## TAX ALLOWANCE FOR CORPORATE EQUITY AND SHAREHOLDERS' EQUITY

8 Compared with 2011, in the years 2012-15, did you or will you increase the company's shareholders' equity (e.g. by issuing shares or self-financing)?

1 No
question 10
2 Yes
9 Don't know, don't wish to answer
question 10

9 To what extent do you believe that the tax allowance in support of economic growth (known as 'ACE', Aiuto alla Crescita Economica) that was part of the end-2011 'Save Italy' decree influenced or will influence the decision to increase your company's shareholders' equity?

Legend: $1=$ not at all significantly; $2=$ a little significantly; $3=$ fairly significantly; $4=$ very significantly; $9=$ don't know, don't wish to answer.

Article 1 of Decree Law 201/2011 ('Save Italy' decree, converted, with amendments, into Law 214/2011) provided for the deductibility of the notional yield of new equity as part of the tax allowance in support of economic growth ('ACE'), with the additional goal of strengthening the asset structure of firms. For private and public companies and public corporations and for other for-profit enterprises, the deduction applies to increases to equity in excess of the amount as of 31 December 2010; for partnerships and sole proprietorships subject to standard accounting practices, the deduction applies to all the equity that appears on the balance sheet. The notional yield is calculated applying a yearly interest rate equal to 3 per cent for 2011-13, to 4 per cent for 2014, to 4.5 per cent for 2015 and to 4.75 per cent for 2016.

## GENERAL INFORMATION

I - Unless indicated otherwise. figures have been computed by the Bank of Italy.
II - Symbols and Conventions:

- the phenomenon in question does not occur;
.... the phenomenon occurs but its value is not known;
.. the value is known but is nil or less than half the final digit shown.
Figures in parentheses in roman type () are provisional. those in parentheses in italics () are estimated.

III - The tables are identified both by a number and by an alphanumeric code that defines the content of the table in the database in the electronic archive in which information to be released to the public is held. A similar code identifies the different aggregates shown in each table.

IV - The methodological notes in the last part of the Supplement are identified by electronic codes that refer to the tables and. within each table. to the individual aggregates. Notes that refer to a single observation are also identified by the date of that observation.

```

[^0]:    1 The interviews were conducted by the Bank of Italy's branches and took place from 22 September to 23 October, involving 3,088 industria firms (excluding construction) and 1,234 non-financial private services firms with 20 or more workers as well as 592 construction firms with 10 or more workers. The shares of firms referred to in the text and in the statistical tables are weighted using the number of workers, and not the number of firms, as was the cases in previous years. This makes it possible to observe more clearly the macroeconomic effects of the individual assessments.

    2 See Banca d'Italia, Indagine sulle imprese industriali e dei servizi, Anno di riferimento 2014, in Supplementi al Bollettino Statistico - Indagini campionarie n.34, 1 luglio 2015.

[^1]:    5 The field of observation has evolved, progressing gradually between 1998 and 2002 from manufacturing firms with 50 and more workers to all industrial and non-financial private service firms with 20 and more workers. For a description of how the sample has changed over the years see Banca d'Italia, "Survey of Industrial and Service Firms Year 2003" in Supplements to the Statistical Bulletin - Sample Surveys, No. 55,. 20 October 2005.
    6 The response rate was 89.9 per cent for industrial firms and 89.3 per cent for service firms. For construction firms it was 89.6 per cent.
    7 For details of the methodology used in the two surveys see Banca d'Italia, "Survey of Industrial and Service Firms Year 2014" in Supplements to the Statistical Bulletin - Sample Surveys, No. 34, 1 July 2015.
    8 Data were loaded onto a web platform directly by $50,5 \%$ of the firms of the sample (they used an interactive pdf questionnaire). The rest of the questionnaires were loaded by the Bank of Italy's branches, that collected data from the firms by telephone, email or fax.
    9 The weighting is separate for the sectors "industry excluding construction", "services" and "construction", and within them, for the groups of firms with "20-49 workers" and "50 and more workers" (for the construction sector the class 10-19 employees has been included since 2014).
