

Banks and Financial Institutions: Credit Conditions and Risk by Sector and Geographical Area

Conversion of the codes and terminology used in the tables of the Statistical Bulletin (version 29 September 2017)

The report *Structure and operations of banks and other financial intermediaries (Statistical Bulletin)* has been discontinued and its contents incorporated into the three new stand-alone specialized publications in the *Statistics series*.

The tables included in the publication *Banks and Financial Institutions: Credit Conditions and Risk by Sector and Geographical Area* contain time series starting from June 2017. Data referring to periods preceding June 2017 (contained in the tables identified by the old codes) are available in the Statistical Database under *Tables no longer updated – Banks and Financial Institutions: Credit Conditions and Risk by Sector and Geographical Area* accessible from the index of contents in the publication *Structure and operations of banks and other financial intermediaries (Statistical Bulletin)* in the [Statistical Database](#).

For further information on the contents of the new publication, see the [Notice to users](#) for the new report *Banks and Financial Institutions: Credit Conditions and Risk by Sector and by Geographical Area*, Bank of Italy, Statistics, Methods and Sources: Methodological Notes, 29 September 2017.

In the report *Banks and Financial Institutions: Credit conditions and Risk by Sector and Geographical Area*, where the contents are the same, the codes and the titles of the tables have been modified and new terminology has been adopted to clarify the main concepts. The definitions have been aligned to those used by other statistical publications which describe the same phenomena.

You will find below the Conversion Chart linking the old and the new terminology, codes and titles of the tables

Conversion Chart linking the old and new terminology and the codes of the tables used in the old Statistical Bulletin and in the new report on Credit Conditions and Risk
